You don't have to save rechargeables. Just charge them.

They discharge themselves if you don't use them.

Tried that, just to save time. They don't have a plug which fits the
7600GR, although they come close. That's when I decided to look for the
real thing...

Best bet is to avoid the left wing stations like Air America.It's just comprised of people who hate America. I don't know what there problem is, they should go live in Russia or Cuba or Afghanistan or something.

Best bet is stick with a bona-fide radio show like Rush Limbaugh. That guy Rush he really knows his stuff. And he loves America. And you know that when you listen to Rush you're getting the real scoop,the real truth on what's going on.

You might not care about your credit rating but you will care when a
lien is placed against your home.

And if you were as financially astute as you like to think you are, you
would know that companies and the Government use your credit report to
decide whether they will hire you, give you a security clearance,
determine the rates they charge you...and many other issues that affect
you.

Your credit rating matters.

And I also note that many of those who are bad credit risks deal in
cash only...because it is the only way others will deal with them.

Ironically, your credit rating will actually be "less than perfect" then! :-)

Assuming you don't need a new mortgage any time soon, I suppose you're set.

Do you have a credit card? I know it's possible, but it sure seems like a
pain to live without one these days... especially for things like renting
cars.

> you.

I'm hoping it'll soon be illegal for companies to use credit reports in determining whether or not they want to hire people. I'm pretty conservative myself, and I have excellent credit, but making it harder for someone who has bad credit to *get a job* strikes me as absurd: Sure, most people have bad credit due to spending too much on HDTVs or fancy cars or whatever and *not* on baby formula and generic brand blue jeans, but even so, the humanitarian in me says it's better to let these people at least get a job and *try* to get their monetary affairs in order than keeping them jobless and forcing them onto the welfare rolls. From an economic point of view, I'd rather have individual companies bear the purported risk that those with bad credit are supposedly more likely to steal, defraud the employer, etc. than foist all those people onto the taxpayer's teat.

For security clearances looking at credit reports seems reasonable... I'm told that for security clearances at a high enough level the feds go all the way back to your childhood to dig up dirt on you that could be used in a blackmail setup.

For interest rates... well... hard to say; I can see more of a legitimate risk there than with hiring.

Forgive me for intruding ... I'm the "rabid" anti-Chuck Harder blogger
on this site ... but have you noticed something very strange about
Chuck Harder this week?
Perhaps I'm imagining it, but on Tuesday and Wednesday, I swear I heard
Ed Shiflett, who's the main tech guy at TalkStar, co-host "For The
People" on the second hour of the show.
Indeed, he did more than just co-host; he led the program discussion,
doing all the intros, bridges, and so forth. Chuck just sat by with an
occasional comment or two.
Is it possible that Chuck Harder is retiring, and letting Ed Shiflett
take over?
I don't know too much about Shiflett, but he seems a tad more moderate
than Harder, which is definitely a good thing.
To me, it would make sense for Chuck Harder to hang up his mike; you
have to admit that he sounds really terrible on the air - and I don't
mean his politics, which are bad enough. I mean his health.
Or is all this just me? Am I instead condemned to 15 more years of
Chuck Harder and his venomous "anti-" claptrap?

Do a search for:
Sony 147612111 ADAPTOR, AC (AC-E600)
*** $100 ***
120V/220V AC input
6V DC output

This is the original AC adapter for the 7600GR in Japan.
You will need an adapter for the AC plug which is available at Radio Shack.

That's true. I don't recommend anyone take apart their best hand-held or
scanner, but if they have old equipment, it's simple way to get all modes
UHF/VHF with just an FM receiver and an all-mode HF receiver.

>
> FDA says it's not from the spinach, but from the bags themselves. Still
> looking for the source.

Respectifully,

I understand that they say that but how would the bags get contiminated?
I believe that the news media as well as other agencies will not state
the actual cause. They need to make the sheeple not see a disadvantage
in hiring illegals.
The LAST thing they want is to give the general populace a reason to
dislike illegals.
It is very apparent that the govt WANTS illegals in this country
regardless of how the people feel about it.
Mark my words, you will see an increase in this type of incidence.
Don't flame me.
Just watch and see.

Again,
respectifully.

1863. radio mart horror story-WILL YOU BE HIS NEXT VICTIM ?????

Newsgroup: rec.radio.shortwave

this appeared in a post this week in a yahoo group I belong to:

"Okay Chuck you are the man. I just bought an R-2000 off this sleaze on eBay who said the unit was in pristine condition and the tuner dial didn't work but just needed a 'reset'! Not only didn't it work but the counter circuit board was disconnected and just hanging there. I found the two screws for it in a little plastic bag inside the radio. So I re-installed the circuit board and it still didn't work.

Then I signed up for this Yahoo group and the first post I read is yours. I tweaked the adjustment pots and VOILA it is now working.

Now all I need to do is fumigate this pristine radio to get rid of the cigarette smoke smell and promise myself never to buy another thing from radio-mart again."

I wont ever buy anything from Radio Mart.The only thing I ever bought off of ebay before a few years ago was a new Elvis Presley Date Book (Notebook) from a guy in Ohio,for that married Irish woman wayyyy over yonder across the big pond.(because she saw them for sale on ebay) That was safe enough and if recall,the book only cost me about four dollars and more than that to snail mail it to her.

Which reminds me,I need to ask her if she needs some more of those Maybelline eye liner pencils that aren't avaliable in the Wallgreen's stores over yonder anymore.That 31 year old brunette divorced woman that lives next door to me got back home from her court thingy in Minneapolis this afternoon.

You think Radio-Mart is bad?? Remind me to tell you about the time
I bought a life-sized female blow-up doll off of e-Bay! They were being
sold by some dirty old man in Florida who was also a ham and used
to jam 14.313 during the heyday of the KV4FZ vs The Maritime Mobile
Net war (1979 - 1999) Well, I gets this idea...why not fill up these
NAKED FEMALE BLOW UP SEX TOY DOLLS with Helium gas?
Yeah! I says... So I fills them up with gas and pack em all into a big
panel delivery truck and park a block away from the Holy Roller Blaptist
Church of the Snake Handler. (real Pentacostal Jeezus toungues speakin
type folks) so....church lets out they come streamin out the doors all
filled up with Jeezus and I lets the dolls loose! They start floating
skyward.
NAKED HELIUM FILLED BLOW UP SEX TOY DOLLS FLOATING
UPWARDS TO HEAVEN SKYWARD.....!! I think that I gave 4 or 5
of em massive CVA's thinking that the missed the "Rapture of The Church"
or something. I was laughing so hard that I pissed myself and my sides
ached
for a week afterwards.

I often stay up all night wondering if Martyn puts the red velvet in
the box with your shipment. That would make up for the poor quality of
the crap he sells.

Wouldn't that be the July 1993 QST article that described a synchronous
detector? I know you've mentioned it before.

I can't put my fingers on the issue, it's around somewhere, and the
reprint in the Handbook leaves off a sidebar or two. And that sidebar
had something about why the author didn't go to a phasing synchronous
detector. He definitely said something about the phase noise of the
receiver's synthesizer, and hence I figure he said something about
the SW transmitters (though I don't recall that bit).

1882. EMR This Sunday -17th of September

Newsgroup: rec.radio.shortwave
Date: 2006-09-16 05:57:04 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <4ICdnYyErp2tD5bYRVnyqQ@bt.com>
Source record: 92058

Shortwave Broadcast on 6045khz at 1200 -1300 UTC + Internet stream

Internet Repeats at:
1500 -1600 UTC
1800 -1900 UTC
2100 -2200 UTC

Good Listening 73s Tom

(Tom Taylor)

The origianl European Music Radio began in 1976 broadcasting from clandestine, mobile transmitters on various frequencies on the 48 metre Short-Wave band. Typical transmitter power was just 10 watts, but despite the low power, EMR's signal was received over most of Western Europe and Scandinavia.

Today EMR is a legal international broadcast station, renting airtime on relay transmitters with considerably higher power and can be heard throughout the world. Most recently EMR has been heard via the T-Systems transmitter in Juelich, Germany on 6045khz. EMR also hires airtime from the Latvian State broadcaster (LVRTC) on 9290khz. EMR also has a 24-hour Internet service.

http://en.wikipedia.org/wiki/European_Music_Radio

Hear audio clips of vintage EMR at
http://www.simonmason.karoo.net/page478.htm

For more information on EMR view

Neither can be heard in most of LA... 1670 does make it at night in areas of lower noise. It has a dreadful primary signal. Tonight, after sunset, I barely got it at Ontario, and lost it again at Calimesa. It was in English part of the time and Spanish after 9 PM.

The station head in Michigan is likely Valdosta, and, if not, the Dominican. KHPY is directional to the West.

I am going to the food store this afternoon (after first stopping off at the Goodwill store.Who knows? I might find me a Watkins Johnson or Drake R8B radio over there,the store is right on the way to the Wal Mart store anyway) and of course I will buy my usual two six packs of beer too.There just might be a drunk sitting on the couch here in Jackson at about 3:30 PM this afternoon.Here,have a beer.

>the SW transmitters (though I don't recall that bit).

Not if this was that project that used a NE604 and NE602. Rather, It was
an article by the same ham that did the "Synchronous CW" very narrow
bandwidth audio filter project that was in the handbook. (Pettit (sp?),
with a 7 area call, as I remember).

He had come up with a new phase shift keyed very narrow bandwidth system,
and it was just an side comment about what their receiver/decoder could
do. You could hook a 'scope up to it and get a phasor display, and they
were surprised that some of the broadcast stations that they monitored
had the carrier phase dancing all around.

You ought not to pick on those nice Pentecostal people like that,they are nice people.I saw some Pentecostal wimmins at the Wal Mart food store department this afternoon.I wear my shoes kind of loose and I was making them go clip clop clip clop like a horse walking along.Them wimmins didn't (on purpose) pay any attention at first (I was in the beer department of the store) but after they got about ten feet past me,naturally I looked back at them (they are about twenty years old and very cute) and they were giggling at each other and looking back at me.I like Pentecostal people.They are fun.

Well that's excellent. I'm glad it is working for you. Even though my
Eton E5 has a jack for an antenna, I still clip the DE31 to the
telescopic antenna rather than plug it in directly. To my ears it
seems to give me a slight advantage. Call me crazy.

Let us know if you get any unusual station receptions with your new
shortwave reception powers!

Message-ID: <450C764E.B889E396@milestones.com>
Source record: 92082

Voice of Hope from Taiwan 6280 is scheduled 2200-2400 in Mandarin on 6280 (Saturdays and Sundays). At 2200 the FireDrake jammer fires up on the frequency.

The parallel frequency 2200-2300 is 9635 but it is blocked here. Parallel 2300-2400 is 7310 so it will be interesting to see if the FireDrake can be heard there.

On other frequencies I've heard the FireDrake take a break from ToH to H+5, not sure if the jamming folks use that time to listen to see if those they are jamming are actually on the frequency.

My DE1105 radio has no antenna jack. When connecting the white clip of the DE31 to the telescopic antenna of the DE1105, reception is improved a bit, but only if the DE31 tuner is off. When turning on the DE31 tuner, reception degrades.

Where can I connect the black clip? I tried it on one of the battery minus poles with some aluminium foil but it didn't help.

Limbaugh is an entertainer created and made special by the near total
dominance of the left wing in every other form of media. Blame your pals
for him. Not that FAIR is exactly a paragon of honesty with no agenda
either. Any organization devoted to conservative media bias is bound to
have waaaaaay too much time on its hands. >

> Not that it matter. The kool-air drinking wing nuts can't handle the
> truth and thus don't want to hear it.

You are certainly living (?) proof of that. When was the last time you
listened to or read anything of substance that didn't tilt leftward or
wasn't 100% certified loony left? Usually numbskulls who blabber about
others not handling the truth wouldn't know it if it bit them in the arse.
You sure help prove that rule, Trotsky.

RE: DE1105 and DE31

At first, I took a wire and connected it to the negative battery terminal and the clip... it did help remove alot of the excess noise... but then I couldn't close the battery cover.

I have since purchased a solder mini-plug (a couple of dollars) from radio shack (they didn't have the non-solder, which I would've preferred). I take off the cover of the plug and clip the ground clip from the antenna to the long connector of the plug. I then plug the jack into the headphone jack, until I feel resistance, so that only the ground is connected. (No soldering involved). I plan on eventually snipping the bottom of the plug.

Again, as others have said, make sure that the amp/tuner is on the correct side of the wire/antenna and fine tune it well.

Nothing will change any "facts" for the likes of you, especially when you're "informed" by a pathetic excuse for a national broadcasting system populated and staffed by neo-socialists. The number of people who felt there were WMDs pre-invasion is incredibily numerous and far more relevant to the decision to invade than what is known now, but that's merely an inconvenient fact to be forgotten by left-wing blow-hards such as yourself . It's almost as inconvenient as the verifiable information in subsequent reports on what Saddam's weapons programs would be like at present had he been left alone.

I am planing to take the Tech test, then following that the CW test.

How long is the CW off-the-air transmission?

Is it transmitted only once?

I know it is 5 wpm, but how can I set my MFJ MENU DRIVEN MEMORY KEYER (model MFJ-492), to that speed? -I use the Bencher paddles.

At what tone HZ is the CW off-the-air transmission set to? This way I could get use to that tone while I practice at home.

Can I please get an example on how would the off-the-air transmission be like?

How many question? And an example on what kind of question would I expect to see on the exam?

Thank you,

73, SR!

The CBC has nothing to do with this in any way, shape or form; but it
does give me excellent insight into your discontinuous mind.

Care to tell me why the American government trusted intelligence from a
known fraud like Chalabi? The neocons called him the "George Washington
of Iraq" - what tripe and drivel! German intelligence even warned the US
government not to trust the information from "Curveball" (a brother of
one of Chalabi's lieutenants). Chalabi had much to gain from an invasion.

Remember the leaked Downing Street memo (July 23, 2003)? Here's a quote
from the memo:
"Bush wanted to remove Saddam, through military action, justified by the
conjunction of terrorism and WMD. But the intelligence and facts were
being fixed
around the policy. The NSC had no patience with the UN route, and no
enthusiasm for
publishing material on the Iraqi regime's record. There was little
discussion in
Washington of the aftermath after military action."

Here's your statement:
"The number of people who felt there were WMDs pre-invasion is incredibily numerous and far more relevant to the decision to invade than what is known now, but that's merely an inconvenient fact to be forgotten by left-wing blow-hards such as yourself ."

The Downing Street memo kills off that particular statement. That must be a major embarrassment for apologists such as yourself. Your government knew there wasn't a problem.

Here's another good one for you:

"But two years earlier, Powell said just the opposite. The occasion was a press conference on 24 February 2001 during Powell's visit to Cairo, Egypt. Answering a question about the US-led sanctions against Iraq, the Secretary of State said:

'We had a good discussion, the Foreign Minister and I and the President and I, had a good discussion about the nature of the sanctions -- the fact that the sanctions exist -- not for the purpose of hurting the Iraqi people, but for the purpose of keeping in check Saddam Hussein's ambitions toward developing weapons of mass destruction. We should constantly be reviewing our policies, constantly be looking at those sanctions to make sure that they are directed toward that purpose. That purpose is every bit as important now as it was ten years ago when we began it. And frankly they have worked. He has not developed any significant capability with respect to weapons of mass destruction. He is unable to project conventional power against his neighbors. So in effect, our policies have strengthened the security of the neighbors of Iraq...'"

Good luck with trying to convince anyone with a shred of common sense that Iraq managed to develop WMD programs over the course of approximately 18 months.

I and many other people heard this chinese opera music many months ago.
Apparently the ham operators only started being bothered by it since
this past August.

Why give them such a dramatic name like Firedrake? Chinese music jammer
is more descriptive.

The FireDrake type of jamming has been on the bands for a number of years now and has been named 'FireDrake' for about as long. Typically it's Chinese music, heavy on the crash bang percussion.

> Apparently the ham operators only started being bothered by it since
> this past August.

Well, they do tend to be bothered by it when SoH (and anybody else) starts broadcasting in a ham band and then the Chinese start jamming there as well.

> Why give them such a dramatic name like Firedrake? Chinese music jammer
> is more descriptive.

I'm not sure exactly who bestowed that name upon them. But in its own way it's merely a shorter descriptive term for that type of jamming.

Now be nice to him, after all it must be lonely in Michigan. He might
hit you with his purse if you get him too upset.

Thanks Michael, i have joined now this group..

In the meantime i have also found this software on internet:
http://www.ham-radio.ch/guides/hrd/hrd.html

and it is free..

Regards
Hans

Good for you Hans. i hope you enjoy yours as much as i have enjoyed
mine. it's really a

first class rig.

Father Michael.

You have to remember JB that common sense, logic, facts, reason, or
anything else that conflicts with their world view is not useful. Of
course, didn't DxDouche say that people that didn't agree with him

should be locked up. Sounds like a Mini Hitler.

I want to know where these WMDs are and have they been found as of yet? Sounds to me like a convenient war to boost the profits for Cheney's buddies at Halliburton. Not to mention a way to fleece the public out of tax dollars by transferring the wealth to the defense contractors. Now we are going to be another 1 trillion in debt because of an unnecessary war. Where is all the proof? Or is it all smoke and mirrors like everything else the current Administration talks about.

Has a pretty good signal today on 17850. It's interesting how their programming has changed over the past year. Not long ago, you were lucky if you ever caught any English language programming from them. They'd occasionally throw in ten minutes or so of news analysis at the end of their broadcast, and you were lucky to catch it. Now they're broadcasting a lot in English and the signal to North America has improved. Interesting.

An interesting radio, which at first looks like it migh be a
Hallicrafters S-120 or similar, but turns out to have an adjustable BFO
and an S-meter. Hums badly, but meter still acts as if all else is OK.
BTW, it is AC-only so probably has a power transformer inside instead
of the all-American series-filament tube lineup.
It was on EBay but didn't sell. $35 as-is plus shipping of $12.65
Paypal please

I looked it up and it certainly looks like a Hallicrafters clone of that era.

If you go inside the case of the ANC-4, it has a jumper you can adjust that "places a high pass filter with at least 50 dB attenuation in the stop band in series with the noise antenna." This is a pretty darned neat feature, in my opinion. It doesn't make the H-800 work any better as a noise antenna, but it does make some of the wires work a bit better. Very nice.

With the high pass filter in series, I find that I more often get the deepest nulls with the frequency range button in the "out" position, even though this is, in theory, the position it should be in for frequencies above 20 mhz. I'm not sure why this came about, but oh well.

Equal performance...but...

The tuning knob on my DE1103 is acting up, and I'm apparently not alone. Tuning in one direction may result in: no change; tuning in the opposite direction; jumping random khz in one direction or another. I suspect this is the result of being assembled in a less than perfectly clean environment. The firmware used to control memories is seriously flawed in its design, but it works. It will catch as many stations as a Sony, but I can no longer recommend the DE1103.

I answered the question in the DE31 thread... quoting myself:

"RE: DE1105 and DE31

At first, I took a wire and connected it to the negative battery
terminal and the clip... it did help remove alot of the excess noise...

but then I couldn't close the battery cover.

I have since purchased a solder mini-plug (a couple of dollars) from
radio shack (they didn't have the non-solder, which I would've
preferred). I take off the cover of the plug and clip the ground clip
from the antenna to the long connector of the plug. I then plug the
jack into the headphone jack, until I feel resistance, so that only the

ground is connected. (No soldering involved). I plan on eventually
snipping the bottom of the plug.

Again, as others have said, make sure that the amp/tuner is on the
correct side of the wire/antenna and fine tune it well. "

WA,

If the Direct-Connection via the External Antenna 1/8"
Mono-Jack causes the Radio to Overload : distorted audio
or off-frequency signal images.

Try building a Jumper-Cable with a Variable Attenuator :
* 1/8" Mono-Jack connected across the outer-arms
of a Pot.
* 1/8" Mono-Plug connected across the one of the
outer-arms of a Pot and the Center-Wiper of the Pot.
* Rear-Barrel of both the Plug and Jack connected
to the same outer-arm of the Pot.
- - - Adjust the Pot to give you the best Radio reception
without causing Overload.

I think you're missing the point of Air America. Liberals don't need
Air America to figure out that George Bush and the Republicans are
incompetant at running the country. That's pretty obvious to anyone
who follows the news. Air America is there strictly for entertainment
purposes. Sometimes, though, I think even Air America forgets that. A
few of their commentators need to lighten up, literally.

If that's all it is, and it's so hard to find, and it costs $100, why
not just get a little switching power supply with a variable knob on
it, to get the 6 volts dc.

Of course, you'll still need the oddball plug; maybe outfit the radio
with a more conventional one.

I'm looking for someone in the Chicago area that is pretty good with acoustics for conference rooms, etc. I need to do some preliminary investigation for a proposal that I want to present to my employer. But at this point I haven't a lot of funding. I will have to find that after I determine what might best help the conference area. Thanks.

There is absolutely no reason in the world to use a switching supply for
this.

The radio doesn't require much current, but the switching supply will
be far noisier than a linear supply unless it's really carefully filtered
and shielded.

The MW DXing classic. The BEST of the Superadio series. Works perfectly. Super clean. I'd give it's condition a 9+/10. Great sensitivity and very sharp nulls. I doubt you will find one in better condition!

Price is $50.00 plus shipping in CONUS

Cowards spray chemicals on their victims instead of facing them. Cowards use depleted uranium and nuclear weapons. Cowards bomb the capitals of oil producing countries from thirty thousand feet up so they don't have to look the people in the eyes when committing the atrocities. Cowards shove chemical flashlights into the rectums of unarmed prisoners. Cowards make prisoners do demeaning tricks. They make prisoners wear dog collars and leashes. Cowards send their sluts into prisons to force prisoners into unnatural acts. Cowards have secret prisons and death chambers to kill untried prisoners of war. Cowards change the Constitution so they may evade prosecution for their crimes against humanity.

Cowards? Sure looks like it, but then you can't expect very much when entire High command are sub human vermin.

==========
72 million litres (19 million gallons) of toxic chemicals were sprayed from the air to destroy ca. 40 percent of the southï¿½s forests, one-third of its valuable mangrove swamps, and large areas of prime cropland. It is also suspected that the chemicals may have resulted in widespread health problems, including cancer and birth defects.

How facscinating that we read nothing from you about Muslim cowards who bomb men, women and children while they ride on buses or stand by the side of the road. How fascinating that you have no estimate of the number of thousands of deaths in Iraq attributable Muslim extremists and their lackeys in opposition to a Democratically-elected regime. How fascinating that your idiotic post contains no reference to the hundreds of thousands, oh let's say millions, of people put in the ground by Saddam, yet you are oh so averse to putting dog collars on terrorists. But, of course, being a complete jackass, you would be an expert on sub human vermin. Have you ever done anything but sit around and criticize those who act against the real vermin while you whine? Nah, I didn't think so.

Is it more telling that those "who follow the news" are too stupid to spell
"incompetent" or that they've been conditioned by the usual left-wing drivel
that dominates their "news" to view "incompetent" as an appropriate term for
someone who has righted the economy through tax cuts that most of those who
"follow the news" opposed.

> might have more problems with quality control coming out of the
> factory. I've read a number of reviews and the two appear to be
> nearly equal in reception. Thanks...

Beside what is said in previous posts, I can recommand (if the price is OK for you) the Sangean 909 : tuning knob, alpha tags and memory pages, excellent with an external antenna, and good enough off the whip.

Perhaps you can also try the Kaito KA1103 instead of the Degen. Since the Kaito version is meant to be exported, the quality controls mights be stronger than the ones for the Chinese market.

I have a KA31 antenna (Kaito) and a TG33 antenna (Degen), and the Degen seems to be of not-so-good quality compared to the Kaito.

Just my take...

Charly

There were no ''tax cuts''. There was a shifting of the tax burden
from those who can easily afford to pay taxes to those who live
week-to-week. The economy is a house of cards.

>

Righted the economy? Compare Clinton's job growth and stock market
growth to Bush's. There's no comparison. And, of course, our whole
venture in the Middle East is the greatest foreign policy disaster in
generations. Then there's Bush's response to Katrina, which was and
still is abysmal.

As for your beloved tax cuts, shifting current spending to future
generations is hardly a solution to anything.

Finally, we have our countdown to the mid-term elections, and Bush is promoting torture. What an embarrassment this man is.

Well, switching or linear, whatever. The point is, if the Sony AC
adaptor is so hard to find, and it's $100, a small, conventional power
supply would suffice.

A communications-quality switching supply would work (all ham
transceivers nowadays are paired up with such critters), or a standard
linear supply.

But the reason transceivers use switching supplies is because on
transmit a lot of power is needed.

That requirement isn't there for just a receiver.

But the "cost" of a switching supply in the application is the noise,
or the real cost of something carefully filtered and shielded, or
doing it yourself, to keep that noise to a minimum.

But that cost has no return, since the receiver requires so little
current that a linear supply will be small and not heavy, and
efficienty will not be an issue.

Saddam's Man in Niger
...
Ambassador Rolf Ekeus is quite possibly the world's most distinguished international civil servant when it comes to questions of disarmament and nonproliferation. A founder of the Stockholm International Peace Research Institute, and a former ambassador of Sweden to the United Nations and to the United States, he has made the subject a lifelong specialty. Appointed by the U.N. to head the UNSCOM inspection team after the end of the first Gulf war, he is credited with uncovering, identifying, and destroying more covert Iraqi weaponry than had been taken out by the war itself.

So widely recognized was the quality of his performance that, when inspections were proposed again in 2000, even Kofi Annan proposed renominating him for the task. (The appointment of Ekeus was overruled by France and Russia, who insisted on Hans Blix.) I might add that the experience also introduced Ekeus to what might be called the underside of Iraqi tactics on WMD: He was once offered a straight bribe of $2.5 million, to his face, by Saddam's deputy Tariq Aziz, and he took part in the debriefing of the Kamel brothers--Saddam's in-laws--when they defected from Iraq in 1995 with conclusive evidence of a state-run concealment program for WMD facilities. Ekeus remembers being met by Zahawie when he first arrived in Baghdad to begin Iraq's post-1991 disarmament, and being told by him that, having met in the past as diplomats, they were now enemies.

"When I first heard that it was Zahawie who had been to Niger," he told me, "I thought well, then, that's it. Conclusive." I asked him if he would put his reasons in writing, and here they are:
...
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=24438

...according to a new book entitled Shopping For Bombs, by the BBC's security correspondent Gordon Corera, another visitor to Niger in that very month of February 1999 was A.Q. Khan, whose black market in nuclear materials was then unknown outside a very small circle in his home country of Pakistan. According to a diary of the journey kept by Khan's associate Abu Bakr Siddiqui and obtained by Corera, "Niger has big uranium deposits." The next year, A.Q. Khan was back in Niger's capital. So we can say with some assurance that Niger's authorities (so briefly and so leniently investigated by Joseph Wilson) seem to have given at least the impression of being open for business...

Since when is resale price of a low-end consumer product a
consideration. I don't buy coffee makers, clock radios or small
portable radios with the idea of reselling them. I buy them to be
used.

>
> The 7600GR has the famous Sony Synch Detector which is offered in no other

The synch detector at best offers modest signal improvement in a
limited of situations.

The radio itself is made to a higher standard however.

$300.00 for the basic unit??? And only 12v output.

A small gas powered generator or just a box of batteries would make a
lot more sense for emergencies. Or a Grundig hand crank radio.

2088. Impedance of a wire over the earth

Newsgroup: rec.radio.shortwave
Date: 2006-09-18 18:02:20 UTC
From: r2000swler@hotmail.com
Message-ID: <1158602540.007895.116390@m73g2000cwd.googlegroups.com>
Source record: 92314

Given the on going OT flame feast I decided to enliven everyone's day
by posting something actually on topic.

Many, maybe most, or us have a random wire for an antenna.

Many may have wondered what the impedance of that wire might be.

<http://www.microwaves101.com/encyclopedia/calwground.cfm>

Enter 1 for the Permitivity. While insulation will have a very minor
effect, the air surrounding the antenna will swamp the insulations
contribution.

Wire size can be found at
<http://www.tfcbooks.com/referenc/wiresize.htm>.

Because most real world wires sag, I pick the highest point and lowest
point
and average them.

Tests with a receiver and a RF noise bridge shows measured values very
close
to the calculated values.

Terry

I would like to say that I have
dreamed of buying a strong short wave. I bought some KAITO shortwave
and it did not seem to be pick up much for my taste. It was a waste of
money. I can't remember the model number. I just left it back home in
the U.S., because it was not strong enough. Anyway, I want to know
more about the following radios Sony ICF-11, Sangean ATS 606, and the
Sony 7600. Which one is the best to get? I am looking for someone
light, durable, and strong in terms of picking up stations of different
countries. I am in South Korea at the moment, and I want to hear the
U.S. and Canada.
I have heard that TECSUN makes decent shortwaves. How do they compare
to the Sony 7600?

Thanks...

Basil

Promoting torture? You need to read something other than moveon.org blogs.

2095. Station identification woes

Newsgroup: rec.radio.shortwave
Date: 2006-09-18 18:26:29 UTC
From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <eemod3$k2q$1@ctb-nnrp2.saix.net>
Source record: 92321

Resulting from my recent Seefontein4 DXpedition, I thought I might share some verification woes with you.

I love DXing U.S. stations not only because they are so far away - 7,800miles/12,500 kilometers, but also because they tend to identify well and speak English. But to the South African ear, the various American accents can prove problematical.

I heard a station on 1510MW that ID' as WRAT, but could not find it anywhere in WRTH or other lists. I asked web friends, but no one had ever heard of WRAT, although I replayed my MiniDisc recorder back endlessly it still came up WRAT = bamboozled. Only after I started working on program details and did extensive web searches of all the stations on 1510 it became apparent that the ID is actually WLAC Nashville TN - I just couldn't grasp the announcers American accent.

Then on 1050MW I got a very clear what sounded like CSVN. Now Canada has the callsign's starting with "C" so I thought whoopee! I've got a very rare Canadian station, but alas, a search of WRTH and the web revealed no such station. So I played the recording to my super DXer friend Gary Deacon and he also felt it sounded like CSVN = really baffled now??? Then we played the recording to my other DX mate Vince Stevens and he immediately ID' it as ESPN, a syndicated sports program that is relayed on many U.S. stations. WRTH revealed that this had to be WEPN N.Y., N.Y. and a later web search confirmed it and that that they were running ESPN at the time I recorded it.

Syndicated programming can be a hellava problem for us DXer's here, as some stations play their Ads and programs for 55 minutes solid with no station ID, except for the FCC mandatory station ID just on or before the top of the hour. As serious DXer's will know, trying to get a station to come in clearly only at the top of the hour can be an impossible task, as often the really rare far off exotics may only appear for as little as five minutes and then fade away. The top of the hour can have a great burst of static from far off thunderstorms, or an interfering station may rise above your target station = difficult.

I got a nice QSL verification from 1700 KVNS Brownsville TX, 8,600 miles away without getting the station ID. I took a careful note of the programming from the recorder and did the web searches and was certain that the program content at that time matched KVNS's schedule exactly and so fired off a QSL request and they came back and verified. I cannot stress the importance of getting as much program content recorded as you can to help you verify that station ID.

Web searches today are a great assistance, as even some extremely small stations have websites, many containing detailed program schedules and

program content to help you with your ID.

Lastly, an anecdote from the past - one or two South African DXer's got Tahiti, French Polynesia on 15 megs when they used to transmit there. Although I tried very hard, I never got that Tahiti station, but one day another DX friend phoned to say he had got it. I was green with envy so tried in the next couple of days for something to come in, and lo and behold I got a French language broadcast of what sounded like Pacific news. I was elated, but being a stickler for getting a proper station ID I waited and waited and eventually they ID' as Radio Beijing with a transmission for the French Pacific regions !#$%^&, so my friend had jumped the gun and assumed the wrong ID. Motto of the story is that you must get those program details clear and a good station ID before you can go crowing about that great catch you think you've got.

Have fun fella's and good DXing.

Source record: 92325

Five years have passed since the 9/11 terrorist attacks in 2001. However, the fear in my heart has kept on growing: Chinese people will be dragged into another catastrophe, which is far more devastating than the 9/11 attacks in the U.S.

In 2001, several doctoral and master's degree candidates at Qinghua University and the Chinese Academy of Sciences were arrested and imprisoned at the First Municipal Detention Center in Beijing because of certain speeches they gave. I am one of them. On September 7 (2001), several of us were transferred to the Beijing Municipal Detention Center in the Haidian District.

Most of the prisoners in the Haidian District detention center were rogues or drug addicts. The police began to intimidate us immediately upon our arrival-the prisoners were ordered to undergo a strip search. There, the guards represented the Chinese communist regime. They were the "dictators" of that place, their words became law.

September 11th in the Detention Center
Usually, it was quiet in the detention center because all of the prisoners were asked to "sit on a board" for self-reflection. This "Sitting on a board" was a torture treatment. The prisoners were forced to sit on a large hard board with both of their arms embracing their thighs. Their upper body had to remain upright and no movement or speech was allowed. As time passed, one's posterior region would begin to feel a sharp, intense pain. Inside the crowded cell of more than twenty prisoners, one could barely occupy a one meter square on average.. A surveillance camera was installed in the cell to monitor every movement. There was also a small, shabby television, which served as a "brain-washing" device-to watch the so-called "educational films" made by the Chinese communist regime.

In the early morning of September 12th, 2001, the quietness of the hallway in the detention center was interrupted by the sporadic ringing of telephones, footsteps, and the guards' wild laughter. The atmosphere of the entire detention center was very jubilant. What could have possibly occurred here to be so joyful? Everyone was puzzled. I sensed a major event had occurred. But could we, the humblest level in the detention center, have the chance to know about it? Were the guards waiting for further instruction from their superiors?

Before long, a guard unlocked the cell and the Boss of the cell was summoned to the office. A while later, a burst of boisterous laughter could be heard from across the hallway. After the sound of rushing footsteps, the guards and the Boss returned with huge smiles. I was wondering what could have happened to make them so happy!

The guard unlocked the cell for the Boss. As soon as he entered the cell, the Boss yelled, "Damn it! Everyone, sit straight! The U.S. has been hit! Ha, Ha, Ha!" He then turned the television to the news coverage about the suicidal terrorist attacks earlier on that day. The video of airliners smashing into the twin towers of New York's World Trade Center was played repeatedly. The collapse of the Twin Towers aroused excitement among the prisoners. They hailed loudly.

Usually, any noise was strictly forbidden in the cell. Anyone who violated this regulation would take the risk of being beaten fiercely or shackled with steel chains by the guards and forced to crawl along the hallway like a dog. However, this prohibition was completely set aside for the moment. Prisoners were allowed to hail the "defeat" of the U.S. The thousands of lives lost with the collapse of the Twin Towers were treated as if they were ants.

Even though China's political leader conveyed his condolences to the U.S. president publicly, I felt in his heart, he was actually laughing. It also didn't seem to matter whether or not there were any Chinese on the list of victims or missing persons.

I endured three 9/11 anniversaries in the prison. On the last two, prisoners were still allowed to watch the news broadcast. In addition to refreshing the prisoners with the video taken on September 11th, 2001, the news coverage also included how the U.S. military has accidentally injured citizens during the War on Terrorism and the Iraqi War and how discontented people have been with the two wars. As a result, the prisoners condemned Americans for creating the troubles that caused their suffering.

My Fervent Brother

I was released from detention in March 2004. I returned to my hometown. My younger brother had tears in his eyes when we first met. He had joined the military when he was 18. By 28, he had become a CCP Army official. He retired from military service soon after my imprisonment.

Unexpectedly, within a few days of my return home, my brother and I had a fierce argument. It was during the time of Taiwan's 2004 Presidential election. Everyday the Chinese media had broadcast news on the possible imminent invasion of Taiwan.

My brother was watching TV, rubbing his palms together. He was eager for a fight. He said, if the Mainland attacks Taiwan, he would return to the military and "erase Taiwan". In his mind, the war was like a game. The 20 million Taiwanese lives were unimportant to him. The presence of many of our own relatives in Taiwan was irrelevant. Later when President Chen Shui Bian was shot, my brother gloated over his misfortune.

I could not believe my brother had behaved like that. He was like an alien to me as I listened to his words. Many years of Chinese Communist Party (CCP) military service had filled his mind with both blood and hatred.

After my brother and I had argued, an older relative said to him, "Why do you have to go to Taiwan? Chairman Jiang [1] is in good health. He plans to

continue in his position as Chairman of the Central Military Commission. His two sons are strong. If there is to be an invasion of Taiwan, Chairman Jiang's sons should set a patriotic example for everyone and request to serve at the front."

Note: 1. Chairman Jiang*, Jiang Zemin, the ex-chairman of the Central Military Commission and also the leader of the Chinese Communist regime.

9/11 After I Was Released

September 11, 2004, three years after the start of my detention, was my first 9/11 anniversary experienced as a free person. Although I could move about my hometown, I had no job and was still under close observation by the CCP. I used my time at home to search the Internet. I surfed major BBS (Bulletin Board System) run by the government and found the following statements:

Proposing all the Chinese military follow the martyrs of the 911 attack.

Send highest respect to those heroes who completed the 911 mission!

Send our respect to all those who are fighting American's invasion and overthrow Americans. Chinese are standing together with you! Defeat America! Defeat American troops! The world should join together and press America into the toilet.

Heros' blood will not bleed in vain, you will motivate us moving forward!

China, I Cry for You

The written history of China extends over 5000 years. The Chinese people have always been proud of their cultural heritage and traditions. In the past people exhibited kindness toward each other and valued peaceful relations with their neighbors.

But in today's China, the people's thoughts and actions are filled with hatred and violence. The doctrines of Confucius and his disciple Mencius, promoting benevolence, righteousness, high moral standards for living, wisdom, faithfulness and compassion, have been completely discarded.

Since the CCP came to power in 1949, the Chinese people have been indoctrinated by a political philosophy fueled by the constant threat of hatred and violence directed at a particular target group. Under such a political system it is not possible for harmony to exist within society.

After 57 years of CCP rule, the Chinese people have lost their cultural heritage, their moral values and any sympathy toward the plight of others undergoing persecution.

Corruption is everywhere. The government no longer serves the needs of its citizens. Organized crime syndicates dominate many regions. Under this situation, human rights and their legal defense are more and more on people's minds. The CCP exerts its illegal rule over a political system that is about to implode.

To remain in power, the CCP has shifted the people's focus away from the very real domestic problems that threaten to destroy society. In the names of nationalism and patriotism, the CCP has redirected the people's focus by inciting hatred toward Taidu (Taiwan independents) and Americans.

Major General Zhu Chenghu, Dean of the Defense Affairs Institute for China's National Defense University, said, "If the Americans fire their missiles toward Chinese territory, we will respond with nuclear weapons. We are prepared to sacrifice all of our cities east of Xi'an. Of course the Americans must realize that hundreds of American cities will also be destroyed by Chinese missiles." His words have won the applause of many students. Their fervor is very similar to that of Japan's youth before World War II.

If the CCP cannot resolve China's internal problems in the near future, history tells us that the CCP will move in one of two directions. One possible direction would be to target another sector of society and place the blame for China's internal problems on this group as it continues to do so against Falun Gong.

Another direction might be to redirect public opinion away from existing internal problems and toward another country resulting in war.

The CCP has never stopped killing Chinese citizens since its first days of power in 1949. The "Three Anti- Campaign," the "Five Anti- Campaign," the "Four Cleanups Movement," the Cultural Revolution, the Massacre at Tiananmen Square and the continuing persecution of Falun Gong are all examples of the CCP's evil nature.

Whether it is the killing of innocent Chinese by the CCP or the start of a war against another country, the catastrophe happening upon the Chinese people is ten times, a hundred times, a thousand times worse than the 9/11 attack on America.

I can smell the blood. People of China, when will you be free of the CCP? China, I cry for you!

2109. OT: Art Bell / Cell Phone Tricks

Newsgroup: rec.radio.shortwave
Date: 2006-09-18 19:42:47 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <12gttlqipu4ro4e@corp.supernews.com>
Source record: 92334

Sorry, this is Off Topic, but contains things - when completed - that may be important to many of us.

Last night / This morning Art Bell was telling of some cell phone tricks that may come in handy to many of us one day and I confess: I was too lazy or sleepy to get up, find some paper and write them down.

As I recall them there were four, at least. I'll start with the two I think I recall correctly.

1) ANYWHERE IN THE WORLD you can use *112 as an emergency call and they will locate and redirect you to the proper number(s) such as 911. (Someone Please correct me if I'm wrong on any of this. -- As if I had to ask. :-)

2) Should you be so unfortunate as to lock your keys - and your automatic door opener in your vehicle you may not be totally out of luck if you have a cell phone handy -- and know someone else with an automatic door opener for your vehicle; i.e. spouse, etc. Call them on the cell phone and have them get their door opener and put it near the phone and press the unlock button - while you hold your cell phone about one foot from the door of the vehicle. It WILL unlock the door! If they are a bit mischievous they could also press the alarm key and set off the alarm INSTEAD of opening the door!!!!

3) I do not recall the process, but: For those who have a Nokia cell phone and MUST make an emergency call while the battery is almost dead there is a reserve battery inside the Nokia that can be called upon to boost your power level by about 50% via the keypad. When the regular battery is recharged this emergency one will also recharge. Anyone recall the steps to this?

4) There is also a way to access your cell phone serial number from your keypad so you can write it down. Then you can call the phone company and have that cell phone totally disabled should it be stolen. Even if the thief has some kind of access card it still will not allow calls from that cell phone. You probably will NOT get your phone back but you can rest in knowing that the thief can no longer get any benefit out of it either! :-)

I realize I might have been able to go to Coast2CoastAM or Art Bell's url if he has one and found this stuff, but thought some of you'd like to know about it anyway. If anyone can locate it online or happened to write it down this morning would you please post it here?

Thanks,

Al

Nobody remotely suggested he was a democrap. They simply said: "He seems to be a typical opportunist who uses the race card when it's to his advantage".

Your attempt at humor aside, it seems to be a straightforward statement. What part of it didn't you understand?

Unfortunately for you it wasn't the result of Impeached Clintoons economic
policies.
Only an ignorant Neo-Liberal propagandist would still be harping this long
debunked lie.

> And, of course, our whole
> venture in the Middle East is the greatest foreign policy disaster in
> generations.

Ah yes, if only the USSR and the Chi-Comms had their way in the M.E.
everything would have been OKay.

> Then there's Bush's response to Katrina, which was and
> still is abysmal.

What are you some kind of helpless Socialist freak?

For a long time now we've been listening to the Democrats and their toadies
in the media complaining about the Bush administration's handling of the
Hurricane Katrina disaster and its aftermath.

They charge it up to what they call the administration's incompetence,
implying that had the Democrats been running the show, things would have
been handled much better.

It takes a lot of gall to make that charge because as one Town Hall blogger,
Cato's Corner, recently pointed out, the Democrats were in charge before,
during and ever since Katrina hit the Gulf Coast.

In the United States, the authorities at the state and local levels are
responsible for what happens in their areas. In Louisiana the governor is a
Democrat, and the mayor of New Orleans is a Democrat. They were the
so-called first responders, and their response was pitiful. They can blame
President Bush all they want, but it was their job to handle the disaster
and their handling of it was a disaster in itself.

That incompetence continues, especially in New Orleans where the cleanup and
rebuilding efforts are lagging far behind where they would have been had
they done their jobs competently. And they can't blame that on the president
or the federal government.

The fact is that $11.8 billion has been allocated. That's everything that
New Orleans asked for. They got $6 billion in December, another $4 billion
in May, another $1.8 billion recently, and yet they haven't spent the money.

One big problem: New Orleans has yet to come up with a master plan that will
allow people to know what they can do and how to do it.

"The citizens of New Orleans need to know what the plans are, so the
citizens can make their plans on whether they should rebuild, repair or sell

their homes," Norman Francis, chairman of the Louisiana Recovery Authority, which oversees federal aid given to Louisiana told the Seattle Post-Intelligencer.

"A lot of people are holding their money back pending an affirmation that the city really has a broader idea of where it's going in the future. What kind of a city is it going to be?" added Ken Topping, a California planning consultant hired to help.

Moreover, the city refuses to relax the red-tape provisions to allow the people to get the money to be able to rebuild, which is exactly the opposite of what Mississippi's Republican Governor Haley Barbour has done in his state. He cut through the red tape to allow the people to get the funds necessary to go ahead and rebuild.

Another reason is that the folks in Mississippi are working together, not standing around waiting for the federal government to rebuild. Officials in Louisiana are still whining, waiting for somebody to do everything for them.

The federal government has supplied the funds. It is the local government that refuses to distribute the money. I was talking to a member of Congress from Louisiana who recalled that the Congress had authorized $6 billion last December but New Orleans made the determination that they were not going to spend any of it until they got the whole $10 billion they were then demanding.

In Mississippi, on the other hand, as they were getting the money they were finding ways to spend it to help the people rebuild.

Tragically, the President is playing into the hands of his critics by implying that he is somehow to blame for the situation. He's allowing the Democrats to use him as fodder in their attacks on him. He needs to stand up and shout, "We're not to blame. We gave you the money. If the people in New Orleans don't have the money it's not because the federal government hasn't done its job; it's because your local government officials refuse to do theirs."

Torture eh. Is that why Iraqi prisoners lament the return of Iraqi guards in their prisons.
Never visited an Eqyptian, Syrian, Iranian, Chinese, N.Korean... prison?
Of course not. Your simply their Useful Idiot.

Interesting take on this. The local store has one little cabinet and a
part of a rack. They're hardly pandering to those experimenters.

I look at it as more that what they direction they decided to head into
won't generate all that much repeat business. How many times will
customers come in to buy new cell phones? Now that the market is
becoming saturated, and cell phone vendors are becoming as common as
pizza takeout joints, It is hard to blame people like me, who UsED to
spend a good bit of money there.

Interestingly enough, while visiting Ottawa this summer, I walked into
a electronics store (a division of Circuit city, but in a mall
environment) and was shocked to find several walls of parts!

> I bet I've been RS 4 times in a month, each time buying $10 or less in
> supplies. Who can pay the rent on such purchases?

I think that relates to my comments above. Wanna do a lot of small
purchases every month, or sell a cell phone once every two years to a
customer. There *are* a lot of experimenters out there. They now buy at
Mouser or the like.

> Hasn't anyone seen the same thing happen to hardware stores?
> The "good old days" of a knowledgeable hardware man spending more than 5

Or that Circuit city store. Of course I haven't seen one of those
places in the States! 8^(

> In my area, at least, there are no components, circuit boards, solder,

> radio. Has it changed over the years? You bet. Why not get out an old
> picture of yourself and look in the mirror. Have YOU changed?

Yeah.... I got better looking.... ;^)

I think to sum up the Radio Shack experience, they were originally the
type of store that sold a little bit to lots of customers. When they
switched to cell phones, they were trying to sell a very little to large
numbers of customers. How many times a year does a person buy a cell phone?

As they marginalized their previous customer base, and now that most
cell phones are replacements, not new buys, the result was inevitable.

I'll miss 'em too. Got several kit radios, a capacitive discharge
ignition kit. several antennas, untold numbers of parts. Stereo
speakers, tape recorders. I used to spend thousands there.

But over the past several years, they've been trying to make sure I
don't miss them very much.

This certainly won't work. The phone "repeats" audio, but the door
opener transmits RF. BTW, most remotes are in the mil air band, just
shy of 400Mhz.

I gave up around 1AM as the open line callers were substantially dumber
than usual. I didn't quite gather why Art cut the secret societies
guest off early, other than the guest was tired due to lack of sleep.
Personally, I thought the guest was not particularly good, and a pot of
Peet's wouldn't help him.

2121. AC Adapter for Sony ICF-SW7600GR Radio - Try External "D" Battery Pack -or- Universal-Radio.Com

Newsgroup: rec.radio.shortwave
Date: 2006-09-18 21:13:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1158613987.492023.301420@i3g2000cwc.googlegroups.com>

>
> Any help is appreciated.
>
> TNX
>
> Dave

Dave,

For "Fixed" Location Radio Listening and Use consider building a
"D" Battery External Power Supply for your Sony ICF-SW7600GR
Radio. Buy the Four (4) "D" Battery Holder at RadioShack or
order-on-line. Get the right size DC Input Plug and wire the Holder
to the Plug. For Normal Everyday Radio Listening : A set of Four
(4) "D"Batteries should last about Six (6) Months or more in the
Sony ICF-SW7600GR Radio.
* Four (4) "D" Battery Holder
RadioShack Catalog # 270-396
http://www.radioshack.com/product/index.jsp?productId=2062245
* 8-Pack D Enercell® Alkaline Batteries
RadioShack Catalog # 23-880
http://www.radioshack.com/product/index.jsp?productId=2062187
Leave the Four (4) "AA" Batteries in the Sony ICF-SW7600GR
Radio -and- When the External "D" Battery Pack is plugged into
the Radio the Internal Batterys are Switched--Out-Off.

NOTE - The Sony ICF-SW7600GR Radio normally requires
6 VDC or Four (4) "AA" Batteries.

TIP - Check-Out the AC-to-DC Adapters and other Power
Souces offered by Univeral-Radio.Com for the Sony ICF-
SW7600GR Radio

2023 - MW-41-680 Regulated and Filtered AC Adapter.
- - - Output 6 VDC @ 300 mA. {About 20 Bucks}
http://www.universal-radio.com/catalog/portable/0360.html

2865 - DCC-E345 Automotive Cigarette Plug Apapter.
- - - Output 1.5/3/4.5/6 VDC 1000 ma. {About 20 Bucks}
http://www.universal-radio.com/catalog/portable/0360.html

4352 - DC Plug Mini DC Power Plug Only.
- - - Fits the Sony ICF-SW7600GR Radio {About 2 Bucks}
http://www.universal-radio.com/catalog/portable/0360.html

Last-But-Not-Least - Take-a-Look at Farnsworth Electronics Inc.
{ The Electronics Grocery Store ! }
"Philmore" Brand Power Supplies
http://www.farnsworthelectronics.com/powersupplies.htm#ac
MW41-650A - Output 6 VDC @ 500 mA
MW630 - Output 6 VDC @ 300 mA

learning to be adaptable :o) ~ RHF

Thanks. I've been wondering what the latest rationalization is from the loony left on the markets and the hugely successful economic numbers following the tax cuts. Your reply is idiotic and obviously incorrect to anyone who knows what occurred, but at least it serves the purpose of telling us what the clueless are thinking. Good job.

Oh, where to start? With the fact the economy was in recession at the time of the change in Administrations? With the fact that Clinontonomics achieved nothing in the first two years of the term until the balance of a Republican congress was achieved? With the fact that the phony stock market of the Clinton years was achieved through a negligent SEC on the backs of those victimized by the likes of Worldcom? Or with the fact that the truly bitter apparently consider democracies to be "foreign policy disasters" or will skip right over two far more responsible Democrats to blame Bush for a natural disaster? Or would it be better to question the cockeyed reasoning that equates Bush's position on interrogations etc. with "promoting torture." If the wacky websites that you get this stuff from are worth their salt, they should at least teach you the definitions of "promoting" and "torture," even given the neo-lefty penchant for changingt he meaning of words to suit the cause of the day.

I gave up as he was telling about the cell phone things. I was too tired and sleepy to bother to write them down. I think the sleep time on the radio was set to about 90 or 120 minutes, but I reached over and hit the power switch.

Thanks for all the replies. Yes there was a couple of cross hatches mentioned in one or both of the two last items.

1) Obtaining serial number from the keypad.

2) Kicking in the reserve/emergency power from Nokia phones.

Al

If Bush is in the deepest pit of hell, it's because he went in to try to
lead you Liberals out of it. President Bush works for all American's, even
stupid liberals like you.

Oops, I shouldn't have said "Stupid liberal", That's redundant.

The questions are radio related like things you exchange in a contact.
There are ten questions. If you don't want to answer any questions, just
have at least one minute of perfect copy. Good luck. CW is fun.

Same radio as Eton E5. They are both the Degan/kaito 1103 with proper
ergonomics. See

http://www.radiointel.com/reviews.htm

for a review of the Degan
adder

2141. Re: AC adapter for Sony ICF7600GR?

Newsgroup: rec.radio.shortwave
Date: 2006-09-19 00:19:08 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <450F3778.588E@mindspring.com>
Source record: 92367

One problem with rectifiers is that they ground and unground the
RF path 120 times a second (60 Hz) and unless bypassed will add a hum
to a received station that has nothing to do with ripple. Many supplies
have this fault.

The effect is that the antenna system is changed 120 times a second.

I say go with batteries.

Having purchased NiMH cells and a charger, they're also useful for
other devices. Get 8 AA cells to start, 4 in the radio and 4 charging.

Don't let them run completely down. The clock in the 7600 will
run them to zero, and unfortunately the weakest cell gets
reverse-charged by the others if that happens, which is not good
for that cell.

< Snip >

Wrong theory on the hum but the right solution. I've giver the reason
for this a number of times and I'm not doing it again. Anyone that has
build linear and switching power supplies knows the reason.

My present orders call for an overnight stay in Washington, Pa which is about 20-30miles from WWVA. WWVA is 50Kw so I am rethinking that waypoint. Primary objective for this mission is to log as many 1kw and below mom & pop AM radio stations across this great nation of ours. Should I take a more southerly route thru Virginia, Kentucky and Tennessee for better AM DX operations?

Regards,
NEO

I would like to listen to the ARRL Voice Transmissions. Here are the
FRQ I found at http://www.arrl.org/w1aw.html#morse

1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and 147.555 MHz.

But the question is what time & days?

Is the Voice Transmissions right after the code or bulletin?

And what are the Voice Transmissions all about?

Thank you,

73, SR!

That married Irish woman wayyyyy over yonder across the big pond in Bognor Regis,England (Booger Reegiz) is from Caherconlish,Ireland.(about eight or nine miles out of Limerick) She is part Irish and part Brit.She knows how I feel about Brits,but she and I are the best of Friends.

I know an Irish woman who works at Fado's Irish Pub (I guess she still works there,she doesn't keep in regular contact with me) in Buckhead,Georgia.Buckhead is in the Atlanta area.She is a Ryan www.ryans.org on her mom's side of her family and Lynch on her dad's side of her family.She is from Limerick,Ireland.She is about twenty nine years old.

The Americans helped out England in exchange for opening up of all Commonwealth countries to US Trade and Commerce. That and the dirt cheap lease of military bases all over said Commonwealth for a term of *one hundred and fifty years*.

England had it's back to the wall, so they gave in to the extortion.

Funny how a Bush was financing Hitler to make sure that England got in a really big mess.

What hypocrisy on your part to even suggest that it was 'helping hand' being offered by the US. It was business of the most dishonourable sort.

Laying on the ground?

If:

Z= 138 * log (4* height / wire diameter)

Then, with a wire on the ground having a zero height,

Z= 138 * log (4*zero / wire diameter) =

Z= 138 * log (zero/ wire diameter) =

Z= 138 * log (zero)

darn...let's try:

Z= 138 * log (http://www.cognigencorp.com/nonmem/nm/99jun101996.html)

and there it all falls apart again, much like the antenna, which
obviously also fell apart. It was obviously not strong enough to let
dxAce lynch himself.

That was on purpose. dxAce has a bagpipe fetish he doesn't want made public and with him being one sixth Scots, he loves the place..being 1/6 of all his Homelands and all.

We, at the dxAce Institute for Moronicity (DIM), will be doing an in depth study into his genealogy in the near future. We expect to expend no time at all in a complete compilation.

Hello: Sorry but I accidentally did not save my last alt.ham-radio.morse post. I have my newsgroup set to delete everything that I read.

Anyway someone sent me a website (to my post) with a CW program to download. I need the name of the program & website again please?

I practice using a MFJ MENU DRIVEN MEMORY KEYER (model MFJ-492) with a HEX Bencher.

I find using paddles a lot easier to use. It seem to be lighter on the finger and thumb. And holding down makes things easier & more perfect.

The down side is wiring the base and adjusting it. I think it best to not move the whole key from the table once it is working.

As for the keyer: (MFJ MENU DRIVEN MEMORY KEYER (model MFJ-492)) I am still learning how to use it. I have not yet used the memory feature. Mostly I use the SP, WT, HZ and Random code RC feature for now.

I change tones or pitch depending on the time I am practicing. If it is morning I set it to the higher side, but not to the highest.

If it is late at night usually I keep the tone or pitch and volume low.

If it is noisy out side then I put it very high not louder, but some how the tone or pitch is easier for me to hear. (At some point I will find a way to connect head phones). Changing the tone also depends on my mood. -I wonder if that is common?

Also, I have a straight MFJ key that once came with a little isolator box on the top of the key. But I did not like the quality of the tone. It had an awful cheap week sound. So I rip off the stupit top and got my self a Palstar Model CW50AC electronic keyer and plug the key to it. It is so much better of a sound. But I need to find buttons to put on the side. I have to use a screw driver to set things on the side.

I like the to use the straight key too. I find it to be more natural. It is the key that most people are familiar with. Less moving parts to deal with. And more challenging fun.

The downside is, that it wares my index finger down.

The MFJ MENU DRIVEN MEMORY KEYER (model MFJ-492 has a better tone to my ear then the Palstar Model CW50AC electronic keyer.

However, none of them have a perfect round solid sound even at their highest pitch and speed. Does anyone know of a better sounding keyer?

As for my progress, I know all of the letter, numbers, period, comma, interrogation and of course error. I need to memorize prosigns and whatever else their is.

I could probably send upto 15 wpm. For about 10 minutes. Spelling from my head can slow me down.

I am much weaker at listening and copying. I need to discipline myself to pay more attention to the up comming charactor then to keep thinking about what I think the last charactor was.

Since I am using a random code, it would be better if I could find a freeware computer program that after copying, I could check myself with the computer program. Better yet: A program that can play out what would be like the actual test.

The only book I have is: MORSE CODE, THE ESSENTIAL LANGUAGE, BY L. PETER CARRON JR.

Is their a more updated and complete book out there?

I am busting my brains out trying to learn how to save FRQ on the ICOM IC-R75. Something about the VFO keeps messing me up.

I have the instruction manual, but I can not seem to understand how to save a FRQ.

Is their a reset button on this radio?

Insert the newsgroup and your name. This will bring up every post
you've ever made in that newsgroup. Hit the sort by date option to
get the most recent first.

http://groups.google.com/advanced_search?hl=en

As for morse code software, this is my favorite. Lotsa options,
including volume and pitch. Also runs on linux under wine.

Hi, To reset first turn receiver off,
the pressand hold BOTH up and down buttons while
turning power on. Your receiver will now
be back tosettins as from the factory,

to add achannel use the channel upto choose achannnel,
enter the frequency 5 mhz would be 5000oo set mode, antenna etc.and
press ent
under the ent button there arowof 3 buttons
the center one is marked MW (memory write. press and hold till you hear
a double beep. Your frequency is nowset.

For alot of tips onthe R75 doa Gooflesearch for Phils R75 Information
Page\. It has ifo to setup filters for the first timeand alot of tips
it simple nontechnical language.

Hop thishelps,

Eeek....kinda pricey for a 35 year old radio with limited coverage.

I think Radio Shack still sells the Patrolman series for about the same price. And it will get you weather band, tv channels, shortwave, FM and expanded AM band coverage.

>> growth to Bush's. There's no comparison.
>
>I believe the Dow is near an all time high. Explain that.

I just look at what happened on who's watch. Under Clinton, the Dow
went from the 2000 range to the 10,000 range. A multiple of five.
Under Bush, the Dow has struggled to stay in the 10,000 range, and is
barely making it into the 11,000 range. An all-time high, but most of
the growth came under the last president.

> Clintons job
>growth pretty much vaporized with the dot.bomb colapse.

Under Clinton, if you take all the jobs lost and jobs gained, there
was a net increase of 28-million jobs in 8 years. Under Bush, he
barely managed to not become the first president since Hoover to have
a net loss, in the red, at the end of his first term. Where is he now,
net gain?

If Bush had Clinton's economy figures he'd be crowing like crazy. He
crows anyway, and some people buy it.

The above transcript is an URBAN LEGEND.

It 100% WILL NOT work as stated.

The full story of this particular amusing Urban Legend is at the URL
below...

http://www.snopes.com/autos/techno/keyless.asp

Wireless Entry devices for passenger cars and trucks use RF.
They do not use audio. Also, the RF signal from a keychain Auto
Remote Entry device WILL NOT carry atop a cellular telephone
transmitted signal.
```

If this method were true and did work as
stated, hackers would sit in parking lots
with scanners and computers getting the
embedded signals off of people's keychains
and the result is vehicle Grand Thefts would
increase 5000% and nobody would want to
own any type of a wireless entry system on their
car or truck.

I am amazed that Bell stated this, as with his background
in ham radio and broadcast electronics, he should have
known this was a crock of chicken beaks....

indeed the floks like Wisemen and Slow code Heil and Robeson inheritied
the ARS from people of some vision and and have slowly had it pried out
of their hands.

they have failed to adapt and change with the time and thus lostthe the
place of the ARS in techinical inovation (wether that can be regained I
don't know) the have lost control of the ARS now. sadly the Nocoders
have not manged to fully grab control either

Dear Basil,

In my opinion, the best radio of the three you mention is the Sony ICF-SW7600GR. Please remember that an antenna (properly matched to the radio) is even more important than the radio itself for good results. The best radio in the world will not perform adequately if not fed properly from a good antenna.

That said, I believe that the Sony ICF-SW7600GR is the best small shortwave receiver currently being manufactured, both in terms of overall performance and construction quality, and its price is right. As you are in Asia, you may be able to buy a Sony AN-LP1 Active Loop Antenna which is a fine match for the Sony. A forty-to-sixty foot long outdoor wire is said by some to perform well with this receiver also, but I have no personal experience with that. Still, as a long wire antenna is inexpensive, it might be worth a try.

I hope the above is of some use to you.

Best,

Joe

Joe, I am still not sure where to buy the Sony ICF 7600
besides e-bay. I may have to do that. I went to a major electronics
place in Korea, and they only had the Sony ICF-11. It is not what I
need. There may be a major Sony outlet, but I cannot read Korean, so I
am not sure how to contact Sony. I am sure I will figure it out. I
will only use e-bay as a last resort. Tell me about this antenna.
Where would I find the AN-LP antenna?

Thanks for your information.... I intend to buy this radio. Tell me
more about this antenna.

WASHINGTON -(Dow Jones)- The U.S. government recorded record-high overall and corporate tax receipts on Sept. 15, which was a quarterly deadline for tax payments, the Treasury said Monday.
Total tax receipts were $85.8 billion on Friday, compared with the previous one-day record of $71 billion on Sept. 15 of last year, the Treasury said.
Within the overall figure, corporate tax receipts Friday were $71.8 billion, up from $63 billion in September of last year.
Treasury Undersecretary for Domestic Finance Randal Quarles said Friday's numbers provided a "continuing demonstration of the strength of the U.S. economy."
"In fact, Friday's gross receipts were the largest in a single day in the nation's history - 20% higher than receipts on the same quarterly tax payment date last year," Quarles said in a statement.

2227. Media Ownership.

Newsgroup: rec.radio.shortwave
Date: 2006-09-19 17:47:00 UTC
From: D Peter Maus <DPeterMaus@worldnet.att.net>
Message-ID: <o2WPg.71104$QM6.57169@bgtnsc05-news.ops.worldnet.att.net>
Source record: 92402

Pursuant to the ongoing duscussions about media ownership in this forum:

AllAccess.Com is reporting that Senator Barbara Boxer (D-Ca) has called for an investigation of FCC after a second report on media ownership the FCC is supposed to have suppressed has come into her possession.

She's reported that while the number of radio stations between March of '96 and March of '03 has risen nearly 6%, the number of owners had decreased 35%.

She's called on Chairman to release the unfinalized report, and comment.

Boxer also noted that no ownership report has been finalized since 2002, while FCC ongoing agendae dealing with ownership would have found these studies relevant.

Meanwhile, back at the ranch:

AllAccess.Com also reports FCC has extended the comment period for its ownership rules review. Comments are now due OCTOBER 23 and replies are due DECEMBER 21. The additional month comes after ION MEDIA NETWORKS and FREE PRESS filed motions to extend the comment dates.

While I don't believe, as many do, that FCC has been bought and paid for, these stories suggest that there is a smell test long overdue on 12th Street SW.

Former Chairman Michael Powell claims not to have seen the draft reports in question. Despite the fact that they were commissioned and subsequently ordered destroyed during his tenure.

BTW, the draft study to which Boxer refers is available for download:

1400 1430 Oceania 9830
1900 2000 Europe 7155
2030 2045 Europe 9680

From other newsgroups _____

All local TV stations have suspended normal programming and are showing the same blue background with an announcement of the state of emergency. and are playing patriotic music much of it praising the King. Some mobile phone services are disrupted. Thai media web sites Bangkok Post etc are overloaded

I just came back from the airport, there was very heavy traffic on the tollway near the off ramp to international, traffic was banked back for 2 kilometres but apart from that no evidence of anything unusual there, all the action seems to be at government house.

An anouncement is to be made later in the night, things may become clearer then.

They have blocked CNN and BBC on UBC cable television where I live in downtown Bangkok.

The vendors along the night market in Silom road were ordered by police to close and go home around 11pm. Other businesses are closing too.

The taxi drivers are heading home with their cars.

This is not a night to be out in the streets.

Here are some eyewittness reports from the BBC website:

SANAPATH, BANGKOK
The situation is very unclear at the moment and Thai people like myself cannot receive any information from the media apart from the occasional pre-recorded messages that more or less suggested that everything is under control... I think everyone is wondering now why

the state of emergency was called in the first place. It is fair to say that as Thai citizens we should be the first people to hear about this, not the people who attend the UN Assembly.

ROBERTUS, BANGKOK
I was on my way to the airport from Hua Lampong Station, thereby passing through Government House. At least five tanks have blocked the roads but everything seems to be calm, restaurants are closed down and armed soldiers are patrolling on motorcycles.

NARUSS, BANGKOK
I was holding a meeting in downtown Bangkok and the meeting was interrupted and everyone was out of the building immediately. There are also troops of fully armed soldiers and tanks around Bangkok, including Chinatown. Now I am at my girlfriend's place. My place is next to the king's palace.

RUSSELL MILES, BANGKOK
I took a taxi to Government House, or as near to it as we could. Troops and guys dressed in Swat-style gear are strolling around. There is a tense but fairly controlled atmosphere. Tanks are lined up blocking the streets, I saw a group of blokes bundling a cameraman and another chap into a van. We are taking photos, but not out in the open.

BILL HANSON, BANGKOK
As I emerged from the subway at Rama 4 and Sathorn I heard sirens and then saw a convoy of military vehicles head on to Sathorn Road with sirens blaring and buses of troops with guns at their sides. Haven't see this for many years here.

JOE P. THAWILVEJJAKUL, BANGKOK
We are seeing a large manoeuvres of armed vehicles near Government House area. This is definitely for real!

In BBC they said that army has control of the TV station, radio station and the government house. The loyalty of troops outside Bangkok is unclear.

Isn't it just amazing how much tax revenues go up when corporations don't have to pay as much in wages? They ship the jobs overseas, increase their profits, and end up having to pay taxes on those additional profits.

And let's not even mention the record profits in the oil industry.. that has to add significantly to those figures.

The economy is a give and take propostion. Sure, the stock market is up. Corporate profits are up. Those two go hand in hand. But overall wages are down. Only the rich are in the stock market, most of the rest of us just basically squeak by on credit.

What's the average cost of a new home now? About $200,000 IIRC? That's up about 400% from 30 years ago.. wages have only doubled in that time. Minimum wage not even that. Gas prices are even worse, they've gone up a shocking 900% since 1974. About the only thing I can think of that's really gotten

cheaper per work-hour is electronics..

Seeing the news on this on Fox/CNN/AFN news. I know there have been issues with the PM there for some time. Thailand is a great place, and I hope that things go back to normal as soon as possible. No sign of R. Thailand on

Not saying I believe they were bought and paid for either, but back in the 50s, an FCC Commissioner was noted for his comment that those were "the whorehouse years", referring to all the behind the scenes payola related to the color system wars and the VHF/UHF debates.

If this was his comment back in the Ozzie and Harriet era, between today's ownership issues and BPL, ya gotta wonder if the fix is in ...

I don't want to leave the impression that Roosevelt was hostile to Britain before the US came into WWII. He was, however, limited in what he could do. Powerful groups and individuals including the German-American Bund, Irish-Americans, isolationists, Ford, Bush, Ambassador Kennedy, and Lindberg were against helping Britain or getting involved in "Europe's wars" . There was opposition in Congress and legal limits such as the Neutrality Act. In fact, some historians have said that the things Roosevelt did to help Britain were acts of war under international law. Certainly the embargo placed on Japan in 1938(?) was an act of war and resulted in the attack on Pearl Harbour. Maybe that's why Roosevelt never declared war on Japan. (look it up). Canada waited for a week after the British declaration to declare so that as much war materiel as possible, finished or unfinished, could be delivered from the US before the Neutrality Act would close off supply. I recall seeing photos of engineless planes being pushed over the Manitoba border in Sept 1939.
I realize that WWII is ancient history as far as the new generation is concerned and of little interest. But everyone should be aware of how the fascists came to power in Germany, Italy, and Japan, and be on guard that Fascism doesn't happen again in a new guise.

Joe, I am still not sure where to buy the Sony ICF 7600
besides e-bay. I may have to do that. I went to a major electronics
place in Korea, and they only had the Sony ICF-11. It is not what I
need. There may be a major Sony outlet, but I cannot read Korean, so I
am not sure how to contact Sony. I am sure I will figure it out. I
will only use e-bay as a last resort. Tell me about this antenna.
Where would I find the AN-LP antenna?

Thanks for your information.... I intend to buy this radio. Tell me
more about this antenna.

In his television statement, Mr Thaksin ordered troops not to "move
illegally" and told army commander-in-chief Sonthi Boonyaratglin to report
to acting Prime Minister Chidchai Vanasatidya.

He also ordered Armed Forces Supreme Commander Ruangroj Mahasaranond to
implement the emergency order.

The transmission stopped after 10 minutes while he was still talking.

Thai Coup Blog
http://www.xanga.com/home.aspx?user=christao408

Thai army declares Wednesday holiday, markets closed
http://thestar.com.my/news/story.asp?file=/2006/9/20/worldupdates/2006-09-20T011515Z_01_NOOTR_RTRJONC_0_-268358-1&sec=Worldupdates

Right now troops from both Sonthi and Thaksin appear to be moving inside Bangkok. One set of troops donned yellow armbands, symbolizing the king, though it remains unclear whose troops they are (rumor has it they belong to Sonthi). Either way, both sides will try to capitalize on loyalty to the throne. And the infirm king will have to speak out in defense of one side or another. Unless Thaksin is able to reassert control and stability in the next 24 hours, the king probably will decide that it is time for a change in political leadership. A short, sharp moment of instability, followed by general stability, is traditional in Thai politics.
http://www.stratfor.com/products/premium/read_article.php?id=275709

...
Like most of the previous 19 military coups since 1932, there was no violence. Tanks surrounded Government House and apparently some newspaper offices. All broadcasting on local TV was interrupted, and replaced by a notice which stated the military takeover and apologised "for any inconvenience."

In the early hours of the coup, most other communications continued uninterrupted. But after several hours, all cable-TV broadcasts were cut, apparently because Mr Thaksin and other Thai ministers were giving interviews to CNN and the BBC, which are widely seen in Bangkok.

Thailand airports remained open, including the main international airport at Bangkok.

Thailand websites including the Bangkok Post were operating under very heavy loads as people tried to find out what was happening. The Bangkok Post newspaper was being prepared and printed for Wednesday morning. The front page headline was a huge, black and capitalised statement:

COUP D'ETAT

As always, local broadcast media contained no breaking updates.

Mr Thaksin said he would return to Thailand from New York. The shadowy coup administrators said he would not be allowed to resume his post as prime minister.

Sources told the Bangkok Post that Privy Council president Gen Prem Tinsulananonda had tried and failed to mediate between the coup forces and another army faction loyal to Mr Thaksin. Gen Prem was summoned to the Royal Palace.

The whereabouts of most of the members the government were unknown. Mr Thaksin, Deputy Prime Minister Surakiart Sathirathai and Foreign Minister Kantathi Suphamongkol were in New York. Deputy Prime Minister Chidchai Wannasathit, the caretaker premier, was reportedly detained by the military.

Text of Official announcements:

Announcements:

The national government through the current administration has caused conflicts and undermined the harmony of the people as never before in history.

Each side is determined to win by any means and the discord has shown a tendency to escalate.

Many people have been suspicious about the actions of the national administration under a constitutional monarchy.

The country has been governed in a way as to suggest widespread corruption. The independent agencies have been dominated by politics. The constitutional intention has been left unserved.

This has led to political activities becoming problem-plagued on many fronts and the situation had worsened to the point where violations against His Majesty the King, whom the people hold in the highest regard, are in danger of occurring. This is despite efforts by many sections of society to resolve the problem on a continued basis. The efforts have not pacified the growing tension, however. For this reason, the Democratic Reform Council with the monarch as its head, which comprises the armed forces leaders and chief of the Royal Thai Police Office, has found it imperative to seize the power of government from this point onward. The council is steadfast in its objective, which is not to take over the government permanently and it will hand back the power to the people as soon as possible.

The council is committed to preserving national peace and security and to upholding the monarchy whom we Thais hold in the highest respect.

First coup announcement:

In reference to the council's announcement of its power seizure earlier, for the sake of peace and order to prevail in the country, the council has imposed nationwide martial law. The council has repealed the state of emergency declared on Sept 19 at 9.05pm. This announcement is made by Gen Sonthi Boonyaratkalin, head of the Democratic Reform Council.

Second coup announcement:

The council has ordered that all mobilisation and movement of military logistics and manpower be prohibited. Military personnel are absolutely not

to leave their units without permission from the council.

Third coup announcement:

1. The current constitution, drafted in 1997, is now repealed.
2. The House of Representatives, the Senate, the Cabinet and the Constitution Court are now dissolved along with the abrogation of the constitution.
3. The privy councillors will remain in their duty.
4. The courts of justice, except the Constitution Court, will retain their full power to adjudicate cases according to the law and the announcements of the council.

Update time: 02:20 am Wednesday September 2006 Thailand time.

Nazis were not very popular with the Dutch. Holland was liberated by
the Canadians in 1944, to flowers and kisses. Queen Wilhelmina and her
family lived in Canada during the war years.

I would like to know what time does Hour of the Time come on?

And I found these FRQ. Which of them comes in better to New York City?

18.910 WBCQ
12.160 WWCR
9.330 WBCQ
7.385 WRMI
7.415 WBCQ
5.070 WWCR
9.955 WRMI

THX

73, SR!

I don't want to leave the impression that Roosevelt was hostile to
Britain before the US came into WWII. He was, however, limited in what
he could do. Powerful groups and individuals including the
German-American Bund, Irish-Americans, isolationists, Ford, Bush,
Ambassador Kennedy, and Lindberg were against helping Britain or
getting involved in "Europe's wars" . There was opposition in Congress
and legal limits such as the Neutrality Act. In fact, some historians
have said that the things Roosevelt did to help Britain were acts of
war under international law. Certainly the embargo placed on Japan in
1938(?) was an act of war and resulted in the attack on Pearl Harbour.
Maybe that's why Roosevelt never declared war on Japan. (look it up).
Canada waited for a week after the British declaration to declare so
that as much war materiel as possible, finished or unfinished, could
be delivered from the US before the Neutrality Act would close off
supply. I recall seeing photos of engineless planes being pushed over
the Manitoba border in Sept 1939.
I realize that WWII is ancient history as far as the new generation is
concerned and of little interest. But everyone should be aware of how
the fascists came to power in Germany, Italy, and Japan, and be on
guard that Fascism doesn't happen again in a new guise.

Canada was unable to declate war immediately because
it required an Act of Parliament, which was not in session. There may
have been other factors at work, but it took that long to assemble
Parliamrnt and do the necessary. I was VE5 in those days. k35454.

It's written tests and CW that keep the sick, lame, and lazy, out of your receiver, not a plonk button or kill-filter. Don't degrade receiver performance. Support keeping CW, and increasing the speed requirement, and make the passing score for writtens 85%.

TNX, 73 de Slow Code :-)

I grew up in Wheeling. You could pretty much get WWVA by clipping your
headphones to your bedsprings in those days!

Seriously, I had several little crystal sets, and WWVA was all you could
get. Every other local was drowned out.

I used to be able to get them every night where I live now in Florida, but I
haven't heard them in years. They must have changed their antenna pattern
or something.

Why do you insist on repeating Neo-Liberal... LIES!?
http://archive.wgnradio.com:8080/ramgen/wgnam/shows/ex720/Audio/economics060
816mr.rm

> And let's not even mention the record profits in the oil industry.. that
has
> to add significantly to those figures.

And do you remember the record low profits when oil was at $15/barrel during
the Impeached Clintoon dictatorship?
Of course you don't. Neo-Liberals use amnesia as an excuse to LIE!

> The economy is a give and take propostion. Sure, the stock market is up.
> Corporate profits are up. Those two go hand in hand. But overall wages are
> down. Only the rich are in the stock market, most of the rest of us just
> basically squeak by on credit.

Most of "us"? Are you pulling bull shit out of your hat or is that your
brain?

> What's the average cost of a new home now? About $200,000 IIRC? That's up
> about 400% from 30 years ago.. wages have only doubled in that time.

Links, where are your links to legitimate statistics?
How much did it cost in labor to build a house 30 years ago?
I couldn't buy a widescreen HDTV with an entire year's worth of my fathers
salary of the 1960's.

> Minimum wage not even that.

"Minimum wage" is exactly that, a minimum. How many ADULT U.S. citizens do
you know personally earning a "Minimum wage"?

Comparing the hourly wage of my first job to my job today, my income has
risen, uhm, let's see here, ha! - 2800%
Amazing.

> Gas prices are even worse, they've gone up a shocking
> 900% since 1974.

Yet automobile ownership has quadrupled.

> About the only thing I can think of that's really gotten
> cheaper per work-hour is electronics..

I can think of another thing. Your cheap Neo-Liberal LIES!

According to the schedule published in QST, the time is 9:45 pm
Eastern time, Monday through Friday, for voice bulletins. Having never
listened to them, I couldn't tell you what they are about, but as
"bulletins" they're probably offer news of some kind.

Tuned in for the 0030-0100 English broadcast, only to find distorted instrumental music, apparently repeating endlessly.

It reminds me of the old Radio Moscow back in the '80's. Whenever something bad happened (leader dying, Chernobyl) they would suspend programming and play classical music all day.

I agree in principle; we can work out the details later. What we
obtain too cheaply we do not value highly. Keep the standards high.
Put some teeth back in ham tests. That tends to weed out those who
aren't serious. While not a panacea it would go a long way toward
cleaning up a lot of the dreck we now deal with on a daily basis.

2293. A humble request for "SlowCode" and contemporaries

Newsgroup: rec.radio.shortwave
Date: 2006-09-20 01:49:08 UTC
From: Roy Lewallen <w7el@eznec.com>
Message-ID: <12h17gktf0opa87@corp.supernews.com>
Source record: 92617
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

As a reader and frequent contributor to the rec.radio.amateur.antenna newsgroup, I see a large and increasing volume of messages cross posted to a large handful of groups which have nothing to do with antennas. Not surprisingly, I don't see any of the regular contributors to this newsgroup participating in the endless arguments about Morse code, testing requirements, and what it takes to be a "real" amateur. These threads seem to be increasing in number daily, involving the same participants, and have grown to the point that the signal-to-noise ratio of rec.radio.amateur.antenna newsgroup is getting seriously degraded. It's becoming necessary to fish through multiple off-topic threads to find the postings involving antennas.

There's no point in including rec.radio.amateur.antenna in the list of newsgroups you send these postings to. There are certainly groups whose readers are much more interested in participating or reading about these topics.

So my request is: Please don't include rec.radio.amateur.antenna in the list of newsgroups you send the original posting to. And when replying to a thread whose topic doesn't involve antennas, simply delete rec.radio.amateur.antenna from the list of newsgroups receiving the reply, before clicking "Send". This won't detract in any way from your discussions, and will be a relief for rec.radio.amateur.antenna readers and participants.

Thanks and 73,
Roy Lewallen, W7EL

Hi Mike,
I'm not worried about receiving WWVA, I am looking to log stations 1KW or less. I'm afraid camping out 20 miles from WWVA might make catching the little signals very difficult. I am only newbie at this so I was hoping I might catch the ear of an expert. The vehicle I am driving is a 1986 Dodge slant 6 with near 200k miles. I think the southerly route through the Appalachian Mountain range might be a better route for catching stations, but it will put a lot of stress on the truck. So there lies the decision. I suppose if others on the board think it to be a problem then maybe I should route my whole trip to avoid the large powerhouse stations. RHF & Mr Lector both posted very helpful links that points out all the Big ones. ve3 suggested I stay at KOA campgrounds for safety sake which I will take as good advice. So possibilities are then somewhat limited. While I just purchased a marginally roadworthy cap for my pickup I don't think pulling into a rest area and sleeping in the back is such a safe idea. I could awaken with my vehicle underway and have to smash my way through a couple windows to regain control of the vehicle.

regards,
NEO

PS thanks Cuhulin for your thoughtful response. Too bad I'm not traveling a little farther south.

You obviously know nothing about me, nor the real world. I am not a neo-liberal, liberal, or for that matter neo-conservative nor conservative. I firmly believe that both camps have serious flaws in their ideals (as well as some of said ideals that are firmly planted in common sense).

As far as oil profits are concerned, who is in power at any one time has very little to do with it. If oil was going for $15 a barrel, it was going for $15 a barrel. Just as if it is going for $70 a barrel now, that's what it's going for. Perhaps you can tell me how it was that the oil companies' profits were at a record low at a time when the raw oil for their products was at a low? Market forces, perhaps? Same for right now.. if people were unwilling to pay $3.00 a gallon for gasoline, there would not be record profits for oil companies. C'est la vie. When we get tired of paying that much, the prices will come down.

As far as what I said about most of us... that would be most of US, the US in general. There are very few people who actually have personal liquid assets. Once you take away the credit cards, mortgages, and auto loans, and force immediate payment of all debt, most would end up owing thousands or tens of thousands of dollars. This is fact, not supposition.

I don't need links. I am going by real life experience over 50 years of being on this planet. In 1975, an average home could be bought for around $55,000 (based upon a nationwide average, they were much cheaper in, say, Mississippi, than in New York or California). Now, the same nationwide average is approximately $200,000 and climbing.

HDTV has nothing to do with it, apples and oranges... besides, I already commented that one of the few things that had come down on a wage/hour basis was electronics. My father was making $600 a trip doing long haul trucking in the 60's (approximately $1200 a month) but we could not even afford a color TV (most of the time we had no TV at all). Of course, that money all went to support a family of seven, rather than on trinkets and toys, a very costly endeavor to say the least.)

I know a large number of adults that are still making minimum wage or not much over it. David Eduardo's are the high end of the radio industry pay scale. The average radio person in a small market gets minimum wage or very little more for announcer (vs. 'air personality) duties. Many repair shop owners do not do well, either. Just because an electronics repair shop gets $50 an hour to repair your television or stereo, doesn't mean they pocket

all of that. I've worked in many a shop where the overhead ate up most of the profits. The technicians themselves often made much more than the shop owner (it was quite common at least into the early 80's for a technician to be paid 50% of the labor charged on a repair), especially during summer months when very few customers were to be had. You gotta keep the doors open, even when nobody is coming in... and that costs $$$.. That's just a couple of examples of real-world economics. Again, most of us do not play the stock market. That would cost a lot of money we don't have. In our current job, we make around $70,000 a year, and yet we save very little because of high credit card, car payments, etc. Our rent alone runs $14,000 a year. Electricity about $5000 a year.. ad inf.

I don't know what or when your first job was, but 2800% is quite a jump. If I were making that much more than I did on my first job in 1971 ($3/hr. = $6240/yr.) I would be making ($6240 x 28 = $174, 720). A tidy sum indeed, and well above the national average wage, which in 2004 was about $36,000.

Oh, by the way, just because something doesn't fit what you have been told by someone else does not make it a lie.

There's an internal battery in some phones to keep the memory alive if
you change batteries, but it wouldn't actually run the phone for more
than a small fraction of a second. It's about as powerful as the CMOS
battery in a computer.

>> 4) There is also a way to access your cell phone serial number from

>> out of it either! :-)

Or just tell the company to disable the phone you have on your account
- they have all the information they need in their database. Although
you CAN get the IMEI of a cellphone very easily.

Eton E5 + DE31 active loop antenna. Located in San Francisco,
California. No signal for 4 minutes, but heard static changes during
those 4 minutes that sounded like a silent transmitter coming on.
Finally, piano music started and has continued for 7 minutes. SIO 353.
I probably can't catch this signal again until the weekend, so I'm
curious what others are hearing in the wake of the coup.

Saddam Hussein wasn't too worried about any private ownership of guns.
The number of AK 47s in that country is astounding. That must mean he
trusted the people completely.

==========
Ironically there are probably millions of AK-47 rifles in the hands of
Iraqis already. Why do we want to supply them with more? Let's
confiscate all we can and redistribute the weapons that already exist.

Well, OK. But it really isn't a matter "conservative" and "liberal" since
those terms don't really define a lot of issues. Think of it more as those
who are threatened and ill-equiped to cope with free markets, as opposed to
those who are intelligent enough to view them as the rising tide that lifts
the most boats.

Sure!

I guess that you were not around during the heyday
of the 14.313 and 75 Meter Jamming Wars of
the late 70's and 80's.

ALL of the QRM'ers involved had a General or better
and in those days you had to pass a 13 WPM code test
to even GET ON the HF spectrum.

Your argument is as pointless as your ball-shaped fart head.

There's probably a telling comment to be made about someone proud to be in
the company of France and Germany in matters of foreign policy, but inaction
is a luxury that some nations have when others are always willing to do the
heavy lifting.

""""""

Ah ha! A red herring and a straw man combination. And a silly one at
that. I made no reference to lend-lease as it came much later than the
period in question and I have no idea of the settlements made after the
war. You figure them out and let me know. I merely asked you what
"facts" you disputed in my post to Cuhulin. There are four of them at
the beginning of the post. We should begin there.

I have no knowledge of such a battery in cellphones, and wonder why
they would use such a battery if flash memory is available.

Now notebooks have/had "bridging batteries." These are small
rechargable batteries often hidden in the hinge. This is to keep
registers in the CPU and mobo alive as you do a battery change. I don't
believe there is a way to operate the notebook on the bridging battery.
It's presence often shows up in situations where you need to reset the
mobo.

My request is: Please learn about kill files, and please learn how to take action yourself by killing all posts crossposted to groups other than rec.radio.amateur.antenna. You'll have a much greater chance of changing yourself than you will of getting everyone else to do your bidding, and you'll be a whole lot less frustrated once you do figure that simple task out.

I have a theory about hams who can't even master a news reader, but I'll leave that discussion for another thread.

Chris, we don't mind using the filters. The problem is they (you) are
changing the subject every single day so we are constantly making new
kill filters. THATS the problem.

2331. OT shortwave radio post

Newsgroup: rec.radio.shortwave
Date: 2006-09-20 12:40:25 UTC
From: Brenda Ann <brendad@shinbiro.com>
Message-ID: <eerckb$80h$1@news2.kornet.net>
Source record: 92507

Finally I have a good receiver (Yaesu FT-7700), but the noise level is driving me to distraction.

What can I do, barring buying a $300 Wellbrook loop, to cut my noise level?

Hint: I've tried dipoles, even vertical dipoles, random wire, and verticals. Would a decent preselector help, or will I just boost the noise more? I have a passive antenna tuner, but since it's got no actual frequency calibration, it's rather a PITA to use. The noise is so bad, that even the local AFN AM station, which I receive at 15dB/S9, has noise in the background. It gets better as I go up in frequency, but much below 6 MHz, it's really bad. (I do get CRI on 5955 at 30dB/S9 with very little noise)

No, YOU are the problem. A proper kill filter will kill all crossposts,
no matter what the identity of the poster may be. If you really knew
how to use a kill filter (and you obviously don't), morphing posters
would present no problem at all.

You also top post, and that makes it obvious that you have a lot yet to
learn about Usenet.

As discussed in some detail a couple of weeks ago, I recently started using a Timewave ANC-4 Noise Canceler and it works like a charm. While it's cheaper than a Wellbrook, it still would not be cheap if you bought it new from Timewave. Used ones pop up pretty regularly on ebay, though.

I actually use the ANC-4 in conjunction with a Wellbrook, and it has really made a difference, especially when it comes to sideband listening. It cancels most of the locally generated noise before this noise can enter the receiver and affect your AGC.

MFJ makes a similar unit. Some swear the MFJ unit is better; others swear the Timewave is better. I'm very happy with the ANC-4, but have absolutely no experience with the MFJ equivalent. I think the MFJ model is a bit less expensive, but it's not as well-built--or so I'm told. The ANC-4 is definitely built to last.

Steve

You should make sure that you have a proper news reader and then configure it as has been outlined in the news.answers FAQs for the last 20 years or so. If Thunderbird won't cut the mustard, then you should drop it in in favor of one of the other three or four *free* newsreaders which can do the job.

Usenet users should take responsibility for their own environment and stop asking others to do it for them. Too many people have a cheesy newsreader (such as Google Groups) and are too lazy to find a good one. They are often the people who complain the most loudly about crossposts instead of doing something about it themselves.

(Hint: People using newsreaders which can filter on the Newsgroups header should develop a filter which uses that header. If an article is crossposted, there will be at least one comma in that header. To kill all crossposted articles, kill all articles with a comma in the Newsgroups header. You can also use the Xref header to do the same thing by searching for two or more colons.)

And what may I ask was the specific economic reasons for growth during
Impeached Clintoon's dictatorship?
Monica Lewinski?

Reagan era tax cuts had the greatest affect on the 1990's economy.
More than anything Monica Lewinski could have slobbered over.

General Norman Schwarzkopf was the spark that set off the 90's growth.
As a result of his route over Saddamn in Kuwait/Iraq overseas investment
poured into the U.S. stock market.

FYI, Alan Greenspan had (US Treasury Secretary has) far more influence over
the economy than any president.
At that time Alan Greenspan's monetary policy was for a strong dollar. And
so indeed it was.

Ah, OT stands for on topic.

If the noise is very local and you have a bit of vertical real estate,
how about a balun? That would let you run coax while in the vicinity of
the noise sources. As far as I know, only the Palomar baluns are specd
for use in the AM BCB,

I use a Wellbrook ala100. I haven't got the ANC-4 to do anything with
the wellbrook, but it is useful for locally generated noise with random
wire antennas.

Noise is worse the lower in frequency you go. However, 5 to 6 Mhz is
generally decent listening.

Can you operate the 7700 from batteries? [12v gel cell for instance.]
If so, run it from batteries at you house and see if the noise is
reduced. Turn off your house power. You can also try to run the radio
in an area away from noise sources using the battery. The first test
checks if the noise is generated by something in your house. The second
test is to see if the noise is generated by your neighbors. [I knew the
guy down the street bought an arc welder weeks before I saw it in use.
;-)]

2346. Re: What Shortwave to purchase?

Newsgroup: rec.radio.shortwave

Source record: 92522

Dear Basil,

I see from one of the later posts answering you that there are some Korean outlets selling the radio. If you haven't done so already, I recommend you check them. I should hope that you know someone who can translate the site(s) for you so that you can order the radio and the antenna.

The AN-LP1 Active Loop Antenna is a foldable loop, designed for easy transportability as well as good performance with most portable shortwave radios. It is meant to be hung indoors in a window and should not be used outdoors unless there is absolutely no wind. It works only on the shortwaves from about 3100 kHz to 22000 kHz and MUST be physically disconnected from the '7600GR for proper MW reception. (It will turn off automatically if you switch to FM and need not be physically disconnected in that instance.) It mates exceptionally well with the ICF-SW7600GR and is, in fact, turned "on-and-off" by the radio. (It is NOT actually "powered" by the radio as many reviews have stated.) You install two AA batteries (which last a very long time) into the control box, plug the antenna into the Sony radio's antenna socket, and, when you turn on the radio, the antenna turns on as well. (It also has a power switch to be used if you use other than an ICF-SW7600GR radio but you need not use this switch when using the antenna with the Sony radio.)

It does not need to be permanently mounted in any particular location, its design allowing it to easily be put away when it is not in use should the user so desire.

I find that it makes a major difference over the Sony's built-in whip antenna in the number of stations I can hear and the clarity wuth which I can hear them. As a matter of fact, I now only rarely use the whip, preferring to use the combination when I use a '7600.

The AN-LP1 antenna has been discontinued in the United States; there is, however, at least one eBay dealer who ships it to the US from Japan and he does not overcharge on price. Note that I have never purchased from any eBay dealer so I cannot comment on such dealer's reliability. However, there may be a Korean dealer ("brick-and-mortar" or, more likely, "online") who sells it. Ask your friend/acquaintance/co-worker who reads Korean to help you here.

In the US currently the price of the ICF-SW7600GR is about $150.00 (it has often gone "on sale" around the holidays) and the AN-LP1, from the eBay dealer, is about $100.00. It may, of course, be priced differently in Korea.

I believe that the effort involved will be well-worth it. Good luck.

Best,

Joe

You may want to read up on Viterbi, Sequential, Turbo Product Codes
(TPC) and Low Density Parity Check (LDPC) forms of FEC to see how they
work and see if that statement still holds true!

It's truly amazing how many errors Turbo codes and LDPC codes can
actually correct even with only an additional 5% of error correction
coding on top of the data stream in some cases!

Does it sound like thermal noise, i.e. a constant whoosh that
doesn't change as you tune?

Or does it sound like electrical noise or
interference, i.e. changes as you tune, has hot spots,
sounds like a buz or squeel?

Are you sure the receiver is good? Do you have another
receiver you can try with the same antenna?

How is your location? Are you in a valley in an urban
area? Hilltop in the country?

Have you got noise sources in your home? My stereo
and DVD players make noise groups every 30 to 60 kHz
when they are plugged in, whether they are turned on
or not. Is your computer monitor near by?

Yeah, I understand. Just seeing WWVA brought back memories!

If I were you I would go further south thru the mountains also. If you
stay on the Interstates it won't be too hard on your vehicle, but the West
Virginia backroads are absolutely notorious for killing front end alignments
and shocks.

Mike

The army commander Gen Sonthi Boonyarataglin who staged the coup d'etat is a muslim.

Muslim terrorists in southern Thailand have killed more than a thousand of people within 2 years.

There were bombs in southern (Muslim) Thailand a few days before the coup. Police investigating reported that the military knew something about them. There is a conspiracy of an inside job.

Nevertheless, most people believed that it was ousted PM Taksin's problem.

Interesting. Can you get a little more specific? Are the materials
different? Is the workmanship more sloppy?

I often wondered whether there was a difference between the domestic
and export Chinese products.

No, not thermal noise or internally generated noise. I get the same thing on
any radio I have.

> Or does it sound like electrical noise or
> interference, i.e. changes as you tune, has hot spots,
> sounds like a buz or squeel?

Definately electrical noise.. (impulse noise). Impulse noise is horrid here,
I don't suppose it helps much that we are two blocks from a substation....
and perhaps 40 meters from a feeder line going into downtown from said
substation.

> Are you sure the receiver is good? Do you have another
> receiver you can try with the same antenna?

See above, there's no radio I have that doesn't have the problem.

> How is your location? Are you in a valley in an urban
> area? Hilltop in the country?

We're in a smallish town, about halfway up a small hill, but in a sort of gully. Rather like a box canyon, but on a hillside.. that probably doesn't make much sense, but it's the best description of the place I can come up with.

> Have you got noise sources in your home? My stereo
> and DVD players make noise groups every 30 to 60 kHz
> when they are plugged in, whether they are turned on
> or not. Is your computer monitor near by?

We've lots of noise sources in the house, but the radio is out in my shop, in a bunker of sorts, made from 1' thick concrete. Without the outside antenna, I receive very little in there. When I disconnect the antenna from the receiver, I hear very little. The local AFN station whose tower is about 2 miles away, and RCI, which I could receive here on a bedsprings if I connected a diode and earphone to it. At first I thought the receiver MIGHT have problems, as in was almost deaf, until I connected my signal generator to it and found I could still get an S9 signal on the radio with the generator set to 100mV output and 80dB of attenuation kicked in. This would be approximately 10uV for an S9 signal, which though I don't know what S9 should be on this radio, seems fairly sensitive. The radio claims usable AM sensitivity down to 2uV... of course usable seems to be fairly subjective. :)

2361. CW Communicator Help

Newsgroup: rec.radio.shortwave

I need help with CW communicator which I already downloaded. Can I get a serial mouse, cut the cable, then find two wires and connect it to a stright key? Is it that simple?

Also, in my PC I use a opticle mouse which uses a USB. I still need to use it for my PC. I do not want this program to mess things up.

Do I need to let WINDOWS know that need hardware was added to the PC?

I might get help maybe right from CW Communicator. But I do not know how to configure it.

Ala Cuhulin, I picked up a Realistic DX-120 at a yard sale today for $5.00.
Anyone got any experience with these, or can point me at some related links?

Roy. I appreciate your point and I'm sorry for disturbing the
newsgroup. It won't happen again, I promise. I'm glad we have
RRAA because I had antenna questions they couldn't answer over
in rec.radio.cb

Does one long continuous wave(CW) make your antenna warm in the winter?

What kind of antenna do you use to receive CW, a vertical co-linear
ground-plane or some form of half-wave Dipole? What's Best?

Does antenna polarization matter if the CW is high speed and received
with a computer?

A lot of hams now are Appliance Operators and hate CW, how can they keep CW of their antennas?

I heard like if you hook the coax to your dipole antenna in reverse, CW comes out backwards, Like POTS would come out as STOP. Is that true?

Thanks Roy, keep up the good work! You're doing a good job. 73

0:30-1:00 9/21 UTC 5890Khz
The signal is booming here in Tennessee. It is being relayed from
Greenville, NC, or so I understand.

Brief mention of the coup and of the (former) prime ministers' corrupt
tax-free business transaction.. Then, straight to business and sports
news (and commercials for Bangkok Airways heh). It appears to be
business as usual? Or at the very least, that is the face they are
putting on for international consumption..

Sounds like you are pretty much on top of things.

Also sounds like you are stuck in a noisy environment. The
only thing I can think of is an active noise canceling
antenna. I've seen them mentioned here in r.r.s but I
don't have direct experience with them. Sounds like they
would be effective for many but not all signals.

Thanks for helping out her if I could just run this by you one more time. I am having a difficult time to make up my mind - but you were the first to respond with some good advice. I agree I think the southerly route would be quite a bit better for picking out some nice low power stations. On the other hand I am more worried about the hills taking a toll on the motor and tranny than the front end. I would think some of those hills may be fairly large and long. Exact route would be down 81 from Chambersburg, PA. Stopovers at Natural Bridge, VA. Boone, NC, and Barbourville, KY before heading into illinois. Can you comment on this route?

regards,
NEO

I thought it was sarcasm. The newsgroup is in such bad state with
all the junk posts that it's close to no longer being about shortwave
radio. Hence an actual post about shortwave is getting close
to being off topic at this point.

Are you ever going to post something SW related or should we all put you
in the kill file with the idiots you seem to like to argue with. All I
see from you is political or other off topic posts.

Build a passive shielded coax loop. You will have to locate it as far
away from any of the mains circuits as possible.

Since the impulse noise is in the electrical mains you will need to use
some ferrite cores on the power cords to the radio and any other device
that is connected to it and the mains power. You can also buy a power
strip with filtering that may help.

HI from Ken in the UK,

I was at a radio show here in the UK about two weeks ago and this new receiver was on display.
The spec is equal to the 'ICOM-7800' regards 'IP2' and 'IP3' on the HF frequencies, in fact it's meant to be the companion RX for the '7800'.
The price quoted for the UK is.....£7.000.00 (around about $12,000.00 US).
It will sell and sell very well, but not to us poor SWL's and Amateurs I'm afraid.

Cheers all, Ken, G4KIR.

I'd try the gel cell power first if possible, before working on line
filters. Another possibility is to power the radio from a car using a
cigarette lighter adapter.

Not quite that clean. The only testing I've done so far it so plug it in to make sure it lights up; I'll hook up a speaker & antenna to it this weekend & give it a run. Probably end up selling it on ebay, as I can't stand receivers with bandpass tuning!

The IC-7800 lists here (per Universal Radio) at $13,466.65 and sells for $10,
599.99. so perhaps the R9500 might go for $10,000 or less.

Actually, it was a DX-160, and yes, I wound up selling it to Universal Radio because I can't stand bandpass tuning, so I plan on selling this too after I check it to make sure it actually receives . . .

Our food supply has just experienced a major contamination caused by
people working illegally in the U.S, (e coli isn't spread by cow
manure; it's what happens when people working in the fields or
restaurants take a shit, don't wash their hands and handle food) which
could be considered the first major act of terrorism committed in the
U.S. since 9/11, or at least prove how easy it is to contaminate the
food supply. Given that, securing the borders sounds like a good
idea. It's certainly more important than sending troops to Iraq which
has nothing to do with national security.

Source record: 92585

How important was western media and the communist led anti-war movement to
the success of North Vietnam and the defeat of America?
...
Even Giap admitted in his memoirs that news media reporting of the war and
the anti-war demonstrations that ensued in America surprised him. Instead of
negotiating what he called a conditional surrender, Giap said they would now
go the limit because America's resolve was weakening and the possibility of
complete victory was within Hanoi's grasp.

And...

Bui Tin, who served on the general staff of the North Vietnamese army,
received South Vietnam's unconditional surrender on April 30, 1975. In an
interview with the Wall Street Journal after his retirement, he made clear
the anti-war movement in the United States, which led to the collapse of
political will in Washington, was "essential to our strategy."

The left wing media is trying to do the same thing in Iraq today.

If the 7800 has a main receiver and a sub-receiver with external
speaker connectors for each, I wonder why a companion receiver would
be needed, especially one with a different range of frequencies.

Neither of which are illogical or frustrating! So I'm really curious to
hear Lisa Simpson's explanation.

2431. Newb Question - is my Dipole setup right?

Newsgroup: rec.radio.shortwave
Date: 2006-09-21 23:37:05 UTC
From: amyotte@personainternet.com
Message-ID: <1158881824.983978.135500@i3g2000cwc.googlegroups.com>
Source record: 92457

After 35 years I recently bought a Realistic DX-160 - the same model I had as a kid. I quickly hooked up to an antenna in the attic I used about 20 years ago on a 1937 RCA 8K console.
The reception was nil. I recalled many more stations as a kid so tonight I rigged up a 35' each side dipole in the attic. I think it means that the antenna is a balanced dipole. Please correct me if I am wrong. I used coax to run from the center to the radio, one side attached to the center lead and the othe attached to the shield.
So far this setup is working much better and the HAMs and more stations are coming in.

My questions are
1. Is this the proper way to hook up this antenna? It runs to the A1 and A2 connection points on the back of the receiver and the jumper from gnd to A2 has been removed.
2. With this setup I lose the shielded lead - should I look for a 2 lead shielded cable?

I will have more questions - I hope not to pester.

Thanks
Brian

First I would kill all the power to your home to eliminate any
possibility of
home grown RFI. I just helped a fellow SWL track down a nasty frequency
hoping spur that would at times wildly "wiggle" from around 5MHz to
above
15MHz. He had swore that he had "checked everything". We used his
DX398 on battery power to listen as his wife killed the main breaker.
The squeal vanished. We used FRS to have her cycle through the
breakers and found the breaker and checked every item on that breaker,
Of course if was the last thing, thier water bed heater, smart
proportional type,
was a RFI sourge.

Next I would take a look at:
<http://www.kongsfjord.no/>
"His" LW/MW noise reducing antenna works very well.
I prefer coax over balanced, but he does get very respective
isolation with his balanced feeder.

Don't go with a longer wire then you need. Many, maybe most of
us, fall into the longer is better trap. Try shorter runs.

If it is in part IMD, then a good preselctor can help
RFH has some plans that appear to work very nice on his antenna group.

Will has built one and I gave it a quick check out tonight and it works much as specificied. Since I often run 2 receivers, and am monitoring frequencies well apart, preselectors are not a good option for me.
I just checked Sherwood engineering evaluation of the FT-7700 is that like my R2000's it uses octave filters that allow "too" much RF crap through before the 1st mixer. A preselctor really should help IMD and especially reduce close dynamic range.

A rotatable loop might let you null out the noise.
I am not a big fan of loops, but many SWL find them great.

I may have some other things that might help, is your email address valid?

Terry

> standing up to mass murderers?

Here is what Kay said: "I think there were stockpiles at the end of the
first Gulf War and a combination of U.N. inspectors and unilateral Iraqi
action got rid of them."

Duelfer replaced Kay and here are Duelfer's quotes: "It turns out that
we were all wrong" and "I believe that the effort that has been directed
to this point has been sufficiently intense that it is highly unlikely
that there were large stockpiles of deployed, militarized chemical
weapons there."

Bringing up Kay shoots down your own argument.

So were Powell and Rice wrong with their statements, which are well
ahead of Kay's and Duelfer's, that Iraq hadn't developed any significant
WMD capabilities.

Richard Dearlove's comments back up the DS memo. No official has
confirmed or denied the memo but Blair is on record as saying "That memo
was written before we went to the UN." Sounds to me as if Blair is
acknowledging the existence and validity of the memo.

Yawn. I applaud your hand waving but that's all you have going for you.
You didn't deal with the Powell/Rice statements and you don't offer any
real arguments against the Downing Street Memo and associated documents.

The USA created a quagmire that did nothing but bog down about 150k
troops and removed the main barrier to Iranian ambitions in the area.
The situation is so bad now in Iraq that additional troops are going to
try and keep the "peace". I'm sure that the morgues in Iraq would be
more than happy for the business that was created.

There are lots of comments flying around right concerning how the
torture situation is worse now than when Saddam was in power.

That's one hell of a "mission accomplished".

I can't stand Ebay... it has done nothing but drive prices to insane
levels... I'm looking for an RF-2200 but not for 300$... a 20 Y.O. receiver
is still a 20 Y.O receiver.

2446. Anudder OT Shortwave radio post

Newsgroup: rec.radio.shortwave
Date: 2006-09-22 02:34:08 UTC
From: N9NEO <yzordderrex@verizon.net>
Message-ID: <1158892448.657480.67240@e3g2000cwe.googlegroups.com>
Source record: 92472

Brenda Ann's post about noise has got me wondering about those wireless phones and computers and stuff like that making noise too. Lately I haven't had much success with the small Degen from my bedroom. Lots of noise on both the whip and the Kaito loop. I have a telephone outlet on the wall behind my headboard which I do not use. I wonder if my computer which is on line 24/7/365 or my new wireless mobile fone thats plugged in down in the kitchen could be causing a prob.

The twisted terminated folded dipole in the attic with the coax run to my shack here in the basement is fairly quiet most of the time.

I love it when the power goes out. Things get real quiet.

regards,
N9NEO

Just say NEO!

Of course, very few receivers of 30 years ago and before had bandpass
tuning either.

I can't speak for Lisa Simpson however I suspect that Lisa got into
radio by first using a radio that has PLL/digital tuning and it has to
do with being able to easily discern what frequency you are tuned to.
Anyone remember making cheat sheets what it says on the dial vs what
the frequency is, letting a receiver warm up then using a cyrstal
calibrator to get the initial set point for the bandspread??

The antenna and coax connections sound OK.

My best guess on the jumper is to not connect it since you have a
balanced antenna connected to the radio. I would expect that you would
connect the jumper for a single wire antenna.

> 2. With this setup I lose the shielded lead - should I look for a 2

No. You have a good setup.

Ethernet cables for sure generate QRM. I'm not so sure about your phone
line presuming there is no DSL on it.

But on that level of receiver, it wasn't just a matter of "well the station
is closer to the 5 than the 4.5" but the 5 wasn't even where it should
have been.

My first receiver, a Hallicrafter's S-120A (the "A" is significant
because it was transistorized), I bought in July of 1971 and I spent all

my accumulated allowance and birthday money on it. It was such a low end receiver that it didn't even have a place for a crystal calibrator.

They were horrible receivers back then, and they still are, yet I think there is something special about them compared to the fancy receivers everyone has nowadays.

Mihael

2454. Firedrake recordings?

Newsgroup: rec.radio.shortwave
Date: 2006-09-22 06:46:35 UTC
From: weatherall <weatherall.2ej4ib@news.radiobanter.com>
Message-ID: <weatherall.2ej4ib@news.radiobanter.com>
Source record: 92486

Does anyone here have any recordings of China's firedrake signal? The only recording device I have is my computer, and it introduces too much RF interference when plugged into one of my radios. I just can't find an inexpensive tape recorder with an unamplified line-in.

I'd like to hear the recordings to confirm what I've been hearing. If you made such a recording yourself, please let me know which radio/antenna you used, along with your location.

Brian - I Am Glad You Asked !

- My questions are

- 1. Is this the proper way to hook up this antenna?

R - Yes

- It runs to the A1and A2 connection points on the back of the
- receiver and the jumper from gnd to A2 has been removed.

R - That would be right connections for your Radio
and the Dipole Antenna.

- 2. With this setup I lose the shielded lead

R - No the Outer-Shield of the Coax Cable functions
as 1/2 of the feed-in-line for the Dipole Antenna.

- should I look for a 2 lead shielded cable?

R - No - You have connected things right.

- I will have more questions
- I hope not to pester.
-
- Thanks
- Brian

FWIW - The 70 Foot Tip-to-Tip (35 Foot per Arm) Dipole
Antenna would be resonant about 6.7 MHz and generally
tend to receive better Off-the-Sides vice the Ends.

* Windom Antenna -vice- Dipole Antenna
An alternate Shortwave Listening (SWL) Antenna design
that could be rigged in the same space would be a
Windom Antenna (Off-Center-Fed-Dipole) of 70 Foot
Tip-to-Tip with a Short-Arm of 27 Feet {8.7MHz} with a
Long-Arm of 43 Feet {5.4 MHz}; and Tip-to-Tip of 70
Feet {6.7 MHz}. The Windom Antenna would give you
a little better broadband Characteristics then the Dipole
Antenna.

* Use a Balun with a Dipole Antenna
Another 'improved' Shortwave Listening (SWL) Antenna
design would use a Balun {Matching Transformer} between
the Dipole Antennaand the Coax Cable feed-in-line. This
is most often a 4:1 {Four-to-One} Matching Transformer.
Using the Balun will better 'match' the Dipole Antenna to
the Coax Cable feed-in-line and the Receiver across a
wide frequency range then simply using a Dipole Antenna
that is directly connected to the Coax Cable.
- - - The direct conneted Dipole Antenna is great for Hams
working on a single Shortwave (HF) Frequency Band.
+ + + The Dipole Antenna using a 4:1 Balun is better for
Shortwave Listeners (SWLs) who are Listening to a
variety of Frequencies across the Shortwave Band.

Very informative ad. I never knew the R8B was not as good as the
original R8. ;-)

It's this balun similar to the ones used to connect 75ohm coax to the screw connects on the back of a TV?

Ditto! I hear a lot of references to different type of jammers, and
would love to see some soundsamples of them so I know for sure what is
being called what. Its too easy to mix them up otherwise....

If it hadn't been for the subversive influence of the American people we
might still be enjoying the Vietnam war today. The will of the people
must be suppressed at all costs!

Please correct me if I am wrong...

I thought the simple dipole had a 75 ohm feed where a folded dipole had
a 300 ohm feed and would need a 4:1 balun.

What would the Balun do with the dipole I rigged up?

Yup, quite true. Not against older receivers, like my DX-302, but
bandSPREAD (yes, I incorrectly said bandPASS earlier, I spologize to those
of you that can't seem to get past that) is just stupid.

2474. Re: DXpedition loggings - Conrad Meadows, Okanogan-Wenatchee National Forest, WA

Newsgroup: rec.radio.shortwave
Date: 2006-09-22 14:22:04 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1158934923.955402.193980@i42g2000cwa.googlegroups.com>
Source record: 92650

Guy Atkins wrote:
> For the first time in many years, I traveled inland within Washington rather than to a coastal site for a DXpedition. My intent was to concentrate on tropical band DXing for a change, as trans-Pacific MW DX is the primary target from the WA coast DXpedition locations such as Grayland and Ocean City State Park.
>
> Conrad Meadows is a beautiful spot in the Mt. Rainier area, and is the starting point for hikers and packhorse trips heading into the Goat Rocks Wilderness. I set up camp in a nearby "dispersed camping" area, where you are free to set up camp in whatever spot looks inviting. I picked a location a short stone's throw from the South Fork of the Tieton River, and between two conveniently-placed pine trees (for antennas).
>
> The area is green and lush during the spring, but this part of the state is bone-dry at the moment...still, it's a pleasant location to camp next to the burbling waters, string up some antennas, and DX completely free from local noise or interference sources. The photos on this individual's blog show what Conrad Meadows looks like in the month of May:
> http://www.moderndogweblog.com/photos/conrad_meadows/conradmeadowsfromabove.html
>
> This was the 3rd DXpedition I've used the PA0RDT Mini-Whip antenna, and it was great to find that it always equalled, and usually exceeded, my Wellbrook ALA 100. The Mini-Whip clearly performs best in a noise-free location and mounted as high as possible. At the campsite I was able to raise the Mini-Whip to a 40-foot level in the branches of a Ponderosa pine; the ALA 100 antenna was erected similarly, with the flat-top portion of an inverted delta loop also at 40 feet. Total loop circumference was 100 feet; probably overkill but the loop was still a fine performer.
>

It's weird that the mini-whip is so vulnerable to noise. Its creator says he designed it specifically for use in urban environments and so that he'd have an antenna for LF work that would be quieter than an active loop. And yet the reviews I read all talk about what a noise magnet the mini-whip is. I don't get it.

I have me an Idee,next time,let's us stay out of limeyland.(Canada too) Churchill once said America should have stayed out of World War Two.(I think there is a link about that at rense.com,I saw it somewhere a few days ago on the internet) The nazis would have rolled over limeyland,,,, untill,,,, untill,,,, the russkies got there.

y'all dont realize it,but it's like this,,, NO WAY!!! was U.S.A.going to let some of those European Countries fall to the nazis!!!,PERIOD!!!

A friend called Sony in South Korea, and they
do not carry it in Korea. At least, that is what my Korean colleague
said after calling Sony in Seoul. I was surprised. This lady told him
they don't import the radios. I may have to rely on e-bay or amazon.
I did see a SW ICF 11, but I have the impression it is not nearly as
strong, and I am puzzled why Sony would say they don't sell it, when I
saw the 11 radio. I appreciate your feedback. The antenna sounds
like a good idea.
I will read upon it and maybe buy the radio off the net and have it
shipped here.

From the official Web site:

" They Call Me The Midnight Cowboy...
Late on the night of 9/20/06 (actually 9/21/06, 0528 UTC), Dan
Quintiliani, K3DRQ stumbled across a bizarre CB transmission while tuning
the dial on his IC-725 ham radio transceiver. The transmission went
something like this:

"They call me the Midnight Cowboy, the Midnight Cowboy,
They call me the Midnight, Midnight, Midnight, Midnight, Midnight..."

...over and over again.

So, Dan decided to record this transmission on his computer, and (soon
afterward) to make a techno remix of it."

>

I just put together a spread sheet and played with different
combinations of long leg and short leg lengths and I am missing
coverage with this dipole. I did find the 43 ft and the 27 ft combo
you suggested to be best and easiest for me to do. I did not mention
that the attic is L shaped. I used the 35' each leg thinking a balance
dipole meant the legs were of equal length. I can add upto another 7'
extension to the end of the revised 43' leg in the future. I popped my
knee last night while in the attic and will have to wait several weeks
for it to heal and strengthen before I do too much attic crawling.
Getting old sucks :(
Adding the extra 7' will add some coverage mainly in the 60m band.

Thanks for the advice.
Brian

Dear Basil,

Frankly, in my opinion, Sony is one of the most STUPID companies in the world with respect to its marketing. Here in the Sony ICF-SW7600GR, for example, they have the best, or certainly one of the best, small portable shortwave radios on the market. It is now over five years into its production and is still well-ahead of anything else that has been introduced (again, this is my opinion) and therefore it needs no re-designing or updating. Thus, its development costs by now are fully amortized and the radio only needs to be manufactured. WHY would Sony NOT advertise this radio? WHY would they NOT make it available officially in all countries?

Amazon sells this radio - and I gather that they sell quite a lot of them. I do not know if they will ship to Korea. You may have to buy from a Japanese dealer who will ship to Korea, if any such exists.

The AN-LP1 antenna is still being made, I believe, but is only available from Japanese dealers. If this is the case, WHY?

WHY, WHY, WHY ... ??? With regard to Sony, I ask lots of WHYs (and this applies to other products they sell, not just shortwave radios).

NONE of Sony's marketing policies make any sense to me - are they trying to DISCOURAGE sales of their products? If so, then they are doing a GREAT job!!!

If you look on Universal Radio's site, they state that Sony forbids them to accept online orders or even to post the prices of the Sony SW radios they sell. Yet Amazon, and most other online dealers, may freely post prices for Sony equipment!

How silly!

Just remember - whatever hurdles you must negotiate to obtain the ICF-SW7600GR and the AN-LP1 - the effort will be well-worth it.

Again I wish you the very best of luck.

Joe

< A friend called Sony in South Korea, and they
do not carry it in Korea. At least, that is what my Korean colleague said after calling Sony in Seoul. I was surprised. This lady told him they don't import the radios. I may have to rely on e-bay or amazon. I did see a SW ICF 11, but I have the impression it is not nearly as strong, and I am puzzled why Sony would say they don't sell it, when I saw the 11 radio. I appreciate your feedback. The antenna sounds

like a good idea.
I will read upon it and maybe buy the radio off the net and have it
shipped here.

> a little better broadband Characteristics then the Dipole
> Antenna.
>

I just put together a spread sheet and played with different combinations of long leg and short leg lengths and I am missing coverage with this dipole. I did find the 43 ft and the 27 ft combo you suggested to be best and easiest for me to do. I did not mention that the attic is L shaped. I used the 35' each leg thinking a balance dipole meant the legs were of equal length. I can add upto another 7' extension to the end of the revised 43' leg in the future. I popped my knee last night while in the attic and will have to wait several weeks for it to heal and strengthen before I do too much attic crawling. Getting old sucks :(
Adding the extra 7' will add some coverage mainly in the 60m band.

Thanks for the advice.
Brian

Internet Jihadis Discuss Nuclear Plot on the United States

Recent reports indicating al-Qaeda's preparations for a nuclear attack in the United States by al-Qaeda's alleged nuclear expert, Adnan El-Shukrijumah, has prompted conflicting reactions among Islamists in the jihadi forums. The jihadi forums described the possible nuclear attack... the debate revolved around whether Islam justifies killing innocent people with weapons of mass destruction. Other forums hailed the news of the possible nuclear attack by saying that "this is a good omen for all lovers of jihad".

Proponents of a nuclear attack on the United States reason that American civilians are not innocent bystanders. According to this view, American citizens are as guilty as the political and military leaders they freely elected who make the decisions to kill Muslims. The citizens are taxpayers, and the leaders use their tax money to implement anti-Muslim policies. They further justify mass killings by saying that "even though [American civilians] are not armed militants, they fund the militants and corroborate government actions." Another forum participant, nicknamed Mohannad Net, says that "we are longing for such an attack to break the back of the American camel...I pray to God that this plan does exist and will be implemented". The strongest argument comes from a participant with the nickname Sendbad Elmassery who refutes the notion that nuclear weapons are banned, quoting a verse from the Holy Quran that reads, "If ye punish, then punish with the like of that wherewith ye were afflicted".

Baghdad, Sep. 19 - Iran's consulate in the southern Iraqi city of Basra came under attack Tuesday morning.

The consulate compound came under mortar fire, reports said.

No one was injured in the attack.

None of the mortars managed to hit the main consulate building but did fall inside the compound's inner perimeter.

On June 14, some 500 Iraqis attacked Iran's consulate in Basra, torching parts of the compound.

The protest followed a similar one days earlier outside the Iranian consulate in the holy city of Karbala.

The participants in both demonstrations were supporters of prominent Iraqi Shiite Ayatollah Mahmoud al-Hassani, an outspoken critic of Iranian meddling in Iraq.

Tehran, Iran, Sep. 20 - A major gas supply line in western Tehran has caught fire, state television reported on Wednesday.

The pipeline caught ablaze 14 kilometres down the old Tehran-Karaj Highway at 11. 27 am local time, the report said.

The cause of the fire had not yet been determined, it added.

The pipeline supplies gas to all of western Tehran.

or why liberals will get us all killed.

Moral equivalence isn't so much the ability to see the truth in all sides as it is the inability to recognize evil, even when it jumps up and bites you on the buttocks.

Communism's Western apologists -- who were legion in academia, the media, politics, the bureaucracy and the cultural elite -- were only able to convince themselves the West was no better than the Soviet Union or China because they were willing to dismiss the gulags, famines, purges and psychiatric prisons while overemphasizing such comparatively trivial western inequities as the gap between rich and poor.

And so it is with jihad's current Western apologists. They obsess over America's secret prisons and its coercive interrogations at Guantanamo, while dismissing as mere propaganda western intelligence on the human rights abuses committed by terror groups and their state sponsors. They decry Israeli retaliation against Hamas or Hezbollah attacks while overlooking the initial terror attacks themselves.

This BALUN information is incorrect.

> It's this balun similar to the ones used to connect 75ohm coax to the
> screw connects on the back of a TV?

The dipole antenna is around the 72 ohm mark, which will vary with
height but is close enough that the BALUN is not needed. If you want to
improve the match with a BALUN you will need a fractional two core unit
to achieve this transform.

A better antenna in the same space would be a folded dipole, which would
use the common and cheap 4:1 transform used with FM and over the air TV
antennas.

If you are going to used a made for TV unit some do not work well at 3
to 30 MHz. Generally look for a unit with more heft due to the more
massive core inside. The units that do not work well from 3 to 30 MHz
use a capacitive matching circuit with a smaller core.

Yes.

A fractional two core. You might find a ham unit that has this transform.

Generally, the bigger the antenna the better it will work at a lower
frequency. Generally, the antenna will work well at the frequency it is
cut for (resonant at) and higher. There are a few exceptions to this
like when you are at two times the design frequency the antenna will
work poorly so when you cut the antenna for a certain frequency choose
a value that does not cause an even harmonic to fall on a higher
international band.

You got that backward and if we had let George S. Patton do his thing
Europe would be a different place.

The down side of the design is that it is a short E field antenna perfect for picking up those local noise fields.

The upside of the design is that it is small so if you can locate it away some distance from the local noise sources then it could have a low local noise floor. It might be possible to do this with a small antenna where you could not manage the same with a full size antenna on an urban lot.

You have obviously never used a radio with a proper bandspread.

My Hallicrafters S-120 does it the wrong way - a separate Bandspread tuner and knob that you use after tuning the main knob roughly where you want it.

My Grundig Satellit 2100 does it right. With the flip of a switch, it breaks out the standard shortwave meter bands - 25, 31, 41 etc . - and actually s p r e a d s them out, taking them from about 1 inch on the tuning dial to almost 6 inches each. The calibration is spot on, and it becomes easier than tuning in local FM stations. Where you had 5 stations in a quarter turn of the tuning knob, you now have 1 station in a half turn. Selectivity is incredible, and fading is largely eliminated - even without a sync - because you can get exactly centered on the signal so easily.

Mike

That makes no sense unless you are also using a BFO in some mode like
side band.

I continue to be amazed by peoples lack of appreciation for sync
detection.

You are undoubtedly correct! The way it's done on these Realistics is just asinine IMHO. Perhaps I need to experience a 2100. Do all the Satelit's have that feature?

Chris,

Normally I would agree that killfiles and delete buttons are certainly indicated in a case like this, but there is a certain amount of newsgroup etiquette that is warranted on your part, too. You can't just do whatever you want on a newsgroup with no accountability and expect everyone else to modify their behavior to accomodate yours. You even cite Usenet etiquette in your own post, so how about doing your share in applying said etiquette to yourself?

Regards,

Al

No, it makes perfect sense. Have you used such a radio? BTW, the 2100 has
no BFO anyways.

> I continue to be amazed by peoples lack of appreciation for sync
> detection.

I appreciate sync detection just fine, having 2 radios that use it - a Drake
R8 and a Satellit 800. The 800's sync is much better than the R8's because
the 800 has selectable sideband. The R8 is double only. Note I'm talking
about an original R8, NOT an R8B!

It makes perfect sense to have to guess at, or calculate, the frequency
you're tuned to, when it would have been just as easy to actually display
the actual frequency you're listening to?

Assuming you are talking about radios without digital displays, I should
point out that they weren't left off old radios for some vague reason.

They were left off because digital displays would require a huge chassis
for all the tubes to make the digital display, and of course that would
drive up the cost so it would be beyond the means of most people.

You could go with a mechanical digital dial, but you then either have
the National HRO (complete with plug-in coils for each band) which
was expensive, but still didn't give linear readout. It cost too
much, and was too complicated, to make each band linear, so the
fine numbers on the dial were just really good logging scales (and
reasonably decent readout).

There were expensive receivers like the R390 that had mechanical
digital dials. They fixed the problem by having the dial cover a fixed
and small range (500KHz), and then adding a converter ahead of it
to get all the bands. It was much easier to get linear tuning,
so the digital dial reflected the frequency accurately, with such
a scheme. But it cost money to pay people to get the tuning linear,
and thus no hobbyist could afford those receivers until they were
available in surplus.

Note that the same scheme did provide pretty good dials without
the mechanical digital readout. But again, it was far easier to
calibrate the dial every 1KHz (and be accurate) when the tuning
only covered a small range and didn't change when the band changed.

In the old days, dial accuracy and precision went up the more you
spent on a receiver.

What's misleading is that solid state electronics have made digital
dials easy and cheap and small, so much so that it's now easier
to use them than trying to do an analog dial. But just because
a receiver has a digital readout now doesn't actually mean it's a good
receiver. They are just as bad as the low end receivers of decades
ago, albeit with a better dial.

A good receiver can be expensive.

> the actual frequency you're listening to?

There is no guessing at all. The dial looks like this:

9 . . . . 9.5 10

etc., and it's perfectly calibrated.

Yes, digital is better, but this is one the best analog tuning radios ever made. I *much* prefer tuning an analog radio to a digital one. Way less noise, and just a better "feel".

Look, I have lots of radios here: E. H. Scott Allwave 23, a Drake R8, Grundig Satellits 650, 700, 800, 2100, Grundig YB400, Grundig S350, Tecsun BCL 2000, Kaito/Degen 1102s, Panasonic RF-2200, etc. etc. Digital radios are great for identifying a signal's exact frequency, but nothing beats an analog radio for just tuning around to see what's on!

Well last night I decided to fool around on MW just for the heck of it. I was tuning around and found a station on 850, weak but definitely listenable. Eventually I heard an ID: it was WYLF out of Penn Yan, NY. Penn Yan is on the other (i.e., the western) side of NY State, not far from Lake Ontario. Not exactly DX, but I looked this station up in the FCC database and its nighttime power is a humble 0.045 KW. During the day they get to crank it up to 1 KW.

Perhaps they forgot to cut the power. I've read some things of late that indicate that some of those stations fail to cut their power at night for whatever reason, sometimes apparently if they have some local sports games on they will keep the power up to keep the local populace happy. The FCC apparently turns a blind eye.

At any rate an interesting catch, and an interesting town name as well, almost has an Asian sound to it.

Indeed, WYLF was fined $11,000 in 2005 for violations including
excessive power. (not only was it running excessive power at night, but
it was also running too much during the day! - nighttime power
violations are common but daytime violations are quite rare)

http://www.fcc.gov/eb/Orders/2005/DA-05-680A1.html

The owner of a daytime-only station recently sent a message to several
AM DX mailing lists indicating that there is in fact a FCC "blind eye"
towards stations that stay on daytime facilities to carry Friday-night
high-school football games. I would be very surprised if anyone at the
Commission would acknowledge such a policy, but I'm coming to believe
such a policy does exist - as the FCC would have very little trouble
finding night power violations on any given Friday night!

Oh. Of course, what this means is that Friday evenings between local sunset and whenever the football games end (say, 8-9pm local time at the station?) can be a VERY productive time to put some smaller AM stations in your log. Especially as they're likely to be running lots of local advertising and mentioning the names of the schools frequently.

2598. Firedrake

Newsgroup: rec.radio.shortwave
Date: 2006-09-23 14:15:58 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <4515419E.C564B118@milestones.com>
Source record: 92774

The Chinese jammer 'Firedrake' was reported recently on 10200 but now seems to have moved to 10400. Noted here at 1410 with a good signal.

Most likely jamming a Sound of Hope outlet. Other reports would seem to indicate that SoH has abandoned their transmissions in the 20 meter amateur bands and therefore no more 'Firedrake' jamming noted there, at least for the time being.

The set is nowhere near a 50-75 ohm input. Especially if the RF gain
isn't fully on.

Looking at the schematic of the DX-160, the antenna inputs feed a 2k
ohm potentiometer, (the RF gain control), (with a back to back pair of
protection diodes from the wiper to ground), and then are switched to
the input windings of the first tuned circuit.

Next, there's a cascode FET RF amplifier and another tuned circuit feeding
the mixer. Both tuned circuits are tuned with the main and bandspread
variable capacitors. And the input coil is tuned with an antenna trim
control, too. (There's plenty of places to mis-tune this RF amp, if the
unit seems a little deaf). Then to a mixer and a 455(?) kHz ceramic
IF filter.

I would try a folded dipole direct to the balanced A1-A2 inputs. The set
doesn't need a balun.

Or Google up RHF's posts from a year or three ago about using a room
sized loop on a ceiling or wall with the DX-160.

> cash only...because it is the only way others will deal with them.

I got in the habit of paying in cash about 35 years ago when I owned
a business, and my suppliers gave a 1.5% discount for paying cash within
10 days of the monthly statement being mailed. I paid cash for vehicles
whenever possible to save the finance charges. In 54 years I have
financed one new truck, and one home, 30 years ago. I have no need for
credit, because if I can't afford something, I'll do without it. The VA
takes care of all of my medical needs, and everything else is paid for.
I'm getting old and with my health problems I have no idea how long I'll
be around. Its not the big deal it was when I was 20 years old.

If your antenna is fed with coax you don't need a balun. The 50 ohm
coax is close enough to the 70-or-so ohms of a plain dipole.

I applied for a credit card in 1972 and was turned down because I
was an E2 in the US Army. You had to be an E6 with five years to
qualify, so I decided I was never going to waste my time applying
again. The credit card companies have probably spent more trying to get
me to apply for a card since them, than I would have used that Chevron
card for.

I really can't travel very far, so I have no need to rent a car. In
fact, my truck was out of commission for over a week before I was able
to crawl under it and cut the damaged exhaust system apart and fix it.
I asked the young man who volunteers for the "Computers for Disabled
Veterans" project get me a few groceries, but otherwise I didn't miss
the truck. He is learning computer repair, in exchange for helping me
finish more computers.

I have always lead a simple lifestyle. Sure there are lots of things
around, but I rarely buy anything new. Only when I can't fix something,
or build it from what I can find. Its very satisfying to look at
something you've built and have someone ask, Wow! Where did you buy
that? :)

I have picked up a couple truckloads of free angle iron bed frames to
build some work carts, but first, I have to build a welding table. I
have a lead on free reject sheets of plywood from a local mill to make
shelving out of. Any sheet that has a splice, or is missing any glue is
rejected. I want to build some shelving to store the spare computer
parts, and wood trays to hold Hard drives, CDROM drives and Floppy

drives. That way they can be sorted, tested, and ready to drop into a computer, as needed.

BTW, I was given another Compaq like yours with the VGA connector sheared off the motherboard. It works with a replacement AGP card, but you know me. I'm going to replace the connector so I can see if the onboard video is still ok. ;-)

Please explain how precisely tuning in a station improves reception
during selective fading. This makes no sense to me.

Well, an R8B would be the best. My R8 is not the best radio I have.

> Please explain how precisely tuning in a station improves reception
> during selective fading. This makes no sense to me.

I can't explain it. All I know is that the 2100 using the bandspread
sometimes gives me a better signal than the 800 using the sync. They are
both using their internal whip antennas, and are side by side on the table.
The 2100 performs *much* better than the 800 without using the 800's sync.
Selective fading is much less drastic. Turning on the sync on the 800
usually makes it perform better than the 2100, but not *always*.

I live in the area. Yes, WYLF was fined for excessive power, and also because the fence around their tower was in bad shape and not secured. The excessive power citation came after at least two previous warnings, so it's not like the FCC blasted them with a big fine for a single instance of accidentally (or deliberately) "forgetting" to reduce power at night. The violation fell into the "willful and deliberate" category since it was at least the third time they had been caught doing it.

About four years ago, WWLZ (820) in Elmira was cited for the opposite problem... being on their nighttime directional pattern (and *reduced* power) during the middle of the day. 700 watts instead of their authorized daytime power of 5 KW. That came to light during a surprise station inspection by an FCC field engineer. No fines were levied - just a warning - as it was determined the mistake was due mainly to inadequately trained staff at the station. The automatic time-of-day-based power/pattern switching function in the transmitter remote control was either inop, or mis-programmed.

The board ops were dutifully and accurately entering the transmitter readings in the log as required, but apparently no one had any clue as to what the numbers actually signified. I wonder if they had noticed that their electric bills had gone down?

It's what happens when stations have no engineering staff. Most smaller operations use contract engineers who only get called in when something is seriously amiss (like being completely off the air.)

By Doreen Carvajal
International Herald Tribune
September 24, 2006
Paris

Perhaps it is fitting that a 50-second video clip of an ear-shattering explosion of 13 shortwave radio antenna towers on the Spanish Costa Brava is getting viewers on the Web site YouTube.

It took 32 pounds, or 14.5 kilograms, of dynamite to fell the massive antennas, which long relayed news from the United States to the former Soviet Union. But the most powerful force behind the demolition was the rapidly shifting landscape of radio, where listeners are migrating toward MP3 players, Internet radio and podcasting.

The felling of the towers was the latest noisy outburst of a cost-cutting trend that is silencing the familiar and crackly shortwave voices that leap across the globe through the clear night sky in times of crisis and Cold War, tsunami and Thai coup.

In January, the Finnish public broadcaster YLE will end all of its shortwave broadcasts with the goal of saving money and diverting resources to online news services.

Next month, Germany's public broadcaster, Deutsche Welle, will end its German-language shortwave broadcasts aimed at Canada and the United States.

The Japanese public broadcaster, NHK, and the Korean Broadcasting System are also reducing shortwave services.

The leading international broadcaster, the BBC World Service, is pursuing a diversification strategy that regards the future in stark terms. "Audience needs are changing and technology is moving rapidly," reads the news service's explanation of its strategy through 2010. "Shortwave is also declining at a fast pace and if we don't change, we will die."

Critics of the retreat warn, however, that shortwave is the most reliable communications medium of last resort. They point out that it can allow determined broadcasters to reach across borders even when repressive national regimes halt FM broadcasts, block Internet sites and jam television programming.

"Shortwave does not respect boundaries and reaches the rich and poor," said Graham Mytton, former head of the BBC's audience research unit and now a media consultant. "Most international broadcasters think things are driven by technology, but not entirely. They're driven by politics and local media

circumstances. Their mistake is they downplay shortwave because they're living in developed societies. But they don't go to rural areas like Nigeria, where everyone has a shortwave radio."

Smaller international broadcasters with more limited resources are phasing out shortwave entirely. Slovak Radio silenced its shortwave programming in July, and Swiss Radio International ended shortwave broadcasts two years ago to transform into an online news service, www.swissinfo.org.

In the meantime, all of the world's largest international broadcasters, from the United States, France, Germany, England and the Netherlands, are cutting back or reviewing precious resources devoted to shortwave radio.

"The future of shortwave radio is quite clear," said Guido Baumhauer, director of strategy and distribution for Deutsche Welle, or DW, in Germany. "It's all going down when it comes to the consumers."

With the average age of its shortwave listeners hovering at about 50, DW expects to save more than ?10 million, or $12.78 million, a year by reducing shortwave services, according to Baumhauer, who said the money would be invested in other services like Internet radio and podcasting.

The state-subsidized broadcaster is phasing out shortwave programs for North America and the Balkans and reducing daily transmissions of shortwave programs to 160 hours from 200.

"In the U.S., if people are really into German they have so many other ways to get consumer information," Baumhauer said. "Considering the costs related to the transmission, there's no point in continuing."

The history of shortwave radio dates to 1927, when Philips Laboratories of the Netherlands transmitted shortwave broadcasts from Eindhoven to the Dutch East Indies.

The BBC trailed behind with the founding of the BBC Empire Service in 1932.

Shortwave radio provided a vital alternative voice in wartime Europe. Radio Oranje, for example, was set up in London after the German occupation of the Netherlands to broadcast uncensored news. Through the Cold War years, international broadcasters used shortwave to shout over the Iron Curtain.

While held in his luxury villa during an attempted coup d'état, the former Soviet leader Mikhail Gorbachev listened to shortwave transmissions of the BBC and Voice of America.

But after the Berlin Wall fell and new media forms flourished, there was less need for shortwave transmissions in developed countries.

International broadcasters like RFI of France and the BBC started striking hundreds of partnership agreements with local FM stations to rebroadcast their programs with clearer sound.

With the advance of technology, it has also become increasingly difficult to say what a radio is, since it can be distributed through digital television,

mobile phones, computers or satellite radio, according to Michael Mullane of the European Broadcasting Union for public broadcasters in Geneva.

The BBC eliminated its North American shortwave transmissions in 2001, when there were still an average of more than two million listeners.

But with FM rebroadcast agreements with local stations, the BBC now has five million listeners in Canada and the United States, according to Michael Gardner, a spokesman for the BBC.

The BBC is constantly reviewing its expenses in connection with shortwave radio, he said, but in the meantime, the news service still reaches two-thirds of its weekly 163 million radio listeners through shortwave.

This year, the BBC actually posted an increase of about five million shortwave listeners in rural areas of Africa and Asia, but Gardner says the increase amounted to existing listeners who were surveyed for the first time in Myanmar.

David Hollyer, former managing director in Spain for the U.S. government's Radio Free Europe and Radio Liberty, is wistful about the long-term consequences of mothballing and destroying shortwave transmitters.

The transmitters in Spain, he argued, could have been deployed to broadcast to Central Asia to reach a Muslim population.

Instead, with the changing political climate, U.S. authorities closed the station in 2003, ended its lease, and turned over the towers to Spain.

When Hollyer watches the amateur YouTube video of the familiar towers crumbling in clouds of smoke, it reminds him of an Edwin Markham poem.

"To paraphrase," he said, "the towers went down with a great shout upon the hills and left a lonesome place against the sky."

Source record: 92718

Greetings. Hope this formats ok.

I was taking a shower this morning and I slipped and I fell and I hit my head on the tub. I hit it pretty hard

too and I think I must have been lying there for quite a while. Ya see, I missed church I was lying there so

long. Mass was at 10 o'clock this morning and I'm fairly certain I woke up at 6 am. I have this little Degen

DE1103 shortwave radio with a built in alarm clock that wakes me up everyday at the same time. 6 am.
When I finally woke up I had a splitting headach, probably the worse one I ever had in my whole life, and

these visions of potatos wrapped in tin foil and cooking on the manifold of my battleship grey 1986 Dodge

D100 pickup truck. Hell, if I had a pistol in my hand I probably woulda stuck that thing in my mouth and let

one rip just to get rid of that doggone headache. Anyway, trucks got one of those slant six motors that

everybody says'll go a million miles. So with that slant six there is only one exhaust manifold. It's kinda stuck

up there near the top of the motor with the intake manifold. Ya following me so far? This truck here I'm

speaking of - it's not all battleship grey. A lot of it is, but there still remains most of the passenger side to

paint which is still the color it was when I got it from Linda Brown. A darker flavor of grey, quite a bit

darker. Linda Brown works over in the accounting department where I work. Anyway back to... Oh,

sorry, sorry, the truck, one thing I wanted to tell ya., it's not really battleship grey either. It's some color that

looks an awful lot like battleship grey. I know this because I used to paint large navy vessels. I was a

sonarman, but when I got busted for smoking dope they made me a Bosn'mate. Later on they changed their

mind and let me back into the sonar gang, but when I got busted for dope the second time with an ounce of

hashish they made me a deck ape again and told me that was final. Bosn'mates take care of painting the

ship, tying knots, keeping things looking good, driving the ship and standing lookout watches and so forth.

They're REAL sailors. Not those sailors that hang inside drinking coffee and refusing to step into the

daylight at the first sign of a cloud in the sky. Anyway, like I said, I know battleship grey.

So there I was laying half in the tub and half on the floor with this splitting headache and these visions of

potatoes cooking up on the exhaust manifold dancing thru my skull. I dragged myself outta the tub and got

dressed and went down to the kitchen and made myself a cup of coffee. My wife, her name is Megan and I

really really like her a lot, she bought me some of those coffee bags to make my coffee, and let me tell you,

I really like them. Plenty strong enough and real easy to deal with. Just like a tea bag - ya know what I

mean?? Megan got em for me cause I'm going on this cross country MW DXpedition. I'm going to try and

log as many little1kw and smaller AM broadcast radio stations as I can on the way out to California. I figure

I'll head out to St Louis and take a left and head down old Rt 66. Now Rt 66 is a little difficult to find these

days. A lot of it is gone, so when you go down Rt 66 you might not be really going down Rt 66.

Sometimes you are, but other times you aren't. So you really need a good set of maps to get yourself down

there. I got some in the mail a few weeks ago. I ordered them from some guy on the world wide web. I

ordered them on a Sunday, he popped em in the mail on Monday and I had them by Friday. I paid good

money for these things, but you gotta have em.

So I go outside with my coffee and I look up at the sky and it aint lookin so hot. I'm supposed to be

painting the truck but it looks like rain. So I open the hood up on the truck and damn if it doesn't look an

awful lot like what I was seeing in those visions that I was suffering from the bump on my head. Back in the

house for some tinfoil and a potato. So I get this nice big spud all wrapped up and shove it between two of

the intake manifold pipes. One of the exhaust pipes is directly under the potato so I'm thinking this thing is

gonna cook up nice. I close the hood and get to work on the inside compartment. Today I gotta get all the

electronics situated. I'm taking this old pickup all the way out to California next week, so I'm going to have

to keep myself occupied. I'll probably end up spending about 100 hours in that cabin over the next couple

of weeks and no one can be expected to just listen to an AM radio for that long. And as far as

concentrating on driving - you can only take that so far too. Ya following me here? So I picked up some

little connectors called power poles. They're little red and black do-dads that you can stick on a wire and if

your other wire has one you can stick em together and make a electrical connection. I bought em at a ham

radio event a few weeks back. They're colored cause you don't want to mix up the positive and negative

polartities when your messing with car batteries.

I got another story about a base cop in Pearl Harbor, some beer, some good dope, and a battery hooked

up backwards that you may find really really funny. If you get me high someday I'll tell you the story. I don't

get high very often anymore, but if you show up with a joint I'll help ya smoke it.

So I got this Little Degen DE1103 radio I told you about. It's a really nice little radio but the audio sucks if

you don't use headphones. So this guy in work turns me on to some amplified speakers that run off a wall

wart. I've been using them down in my ham radio shack to listen to an Icom R-75 receiver. An R75 is a

nice little radio, but it has it's own set of quirks. Audio sucks like the worse thing I ever heard and the sync

detector doesn't work for shit, but there are some mods that'll make the thing work nice. Even all modded

up it still ain't no Drake R8B. I needed some cash so I sold the Drake.

Hey, wait a minute here. I'm listening to Timtron here and I know he's on Saturday night. No wonder I

didn't find anybody at church today, it's Saturday. Mass is tomorrow. Great! So I sold the Drake because

the wife needed a kidney transplant and had been bugging me for a long long time about it. Ya know how

girls can get. They get something in their head and they never stop. Yackity yak yak yak. Nothing a good

brain transplant wouldn't take care of - so I'll probably have to sell another radio soon. So I finally gave in

and sold the Drake - I hope she likes her new kidney.

So I open up these little amplified speakers Randy gave me and do a little re-wire job and stick some power

poles on it and away I go. I stick it on my battery eliminator and plug the Degen DE1103 into them babies

and now we got something we can listen to. So I velcro-ed the speakers to the dash. I'll probably stick

some velcro on top of my cap on the back of my truck for when I get to the campsite each day. My

daughter Robin is going to paint an American flag on top of the cap for me tomorrow to let them big rig

drivers know I'm just like them. Snatch the speakers off the dash and plop em down on the cap and I got

music to pitch a tent by. Not that the tent is going to take any time to get put up. You put up a tent lately? I

swear the tents they're selling these days can almost set themselves up. Gotta get em lashed down good

though cause they'll take off like a tumbleweed if ya turn your back on em. Now I got this Yeasu 2meter

ham radio that I'm going to bring along and a CB radio too. So I need to make all these connections. I got

a cell phone charger to bring too and this same dude Randy that gave me the amplified speakers gave me a

radar detector to bring too. I think I'll give him the radar detector back. I don't like driving fast anyway.

Especially when somebody is tailgating me. I slow way down and try to maintain two seconds between

vehicles when I get a tailgater on my ass. I especially like making right turns when a tailgater is on my ass. I

slow way way down and almost stop when I make a right turn. So far nobody has hit me but they usually

flip me off or start yelling F**K YOU or something like that. Heheh, one day one of those spincters is going

to run into me and finance my retirement. Nothing fancy, just a small place on a hill top with some big

antennas and a big metal barn that I can paint cars in.

So I made up this piece of plywood with a bunch of fuses and powerpoles stuck to it and so forth to plug all

this stuff into. And then I get the CB radio antenna and the 2m ham radio antennas stuck on and I'm good to

go. I was gonna head on up the hill by the highway and see how the radio works on ch 19. That's the

trucker channel, but I don't know if they even like talking to people who don't drive big rigs. I kinda ran out

of time so I didn't get the CB checked out. The little Degen DE1103 does a nice job even with the whip

antenna laying inside the truck across the dash. I'll try and get something rigged up a little better for an

antenna. Maybe I'll try and get the regular outside radio antenna hooked into the Degen. I think the

automakers still put these connectors on their antennas that wont connect to anything but a car radio. I have

a AM/FM radio in the dash, but AM doesn't work at all, and FM kinda sucks too. I like to listen to

Christan rock music on the Klove radio network, so I really need FM. I like the classic rock too so I'll just

mix it up as I go along. I don't think Classic rock will get you to heaven though. I had this Catholic priest

told me one time that it really didn't matter what you did here on earth. He said as long as you listened to

Christian music and hung up some of those "I Love Jesus" air fresheners in every one of your cars there was

no way you would go to HELL. I'm not too sure I'm going for that though and I think I'll behave myself just

in case, and besides, I think that priest may have had some issues with behavior himself.

So after I get the electronics pretty much situated I'm off to Wal-Mart for some supplies. I really like

Wal-Mart cause them left winger tax and spend liberals don't like em for some reason. Some kinda big

news today that Wal-mart is going to be selling prescription drugs at reduced rates to help people out so the

left wingers will be eating some more shit over that. They seem to be eating lots of shit lately, so I guess

maybe they've developed some kinda taste for it. Got some paint and stars for the cap at Wallyworld and

then over to the auto parts store for some window tint and a just in case bottle of stop leak for the radiator.

I don't really like people looking at me so the tint will keep em wondering. I got some issues with paranoia

myself and better not to have people looking at me. I'll stick some Harley decals on the back widow in the

cap. I ride a nice Black Anniversary Softail so I'm ok with sticking the Harley decals on the truck. I got a

skull and crossbone flag that I'm going to fly on the antenna and maybe a sign that says "GOT GUN?" on it

along with some NRA stickers. I got a big knife to hang on my belt and a black eyepatch too for when I go

into Waffle House. Thge eye patch was a good find by my daughter. Good thing it's close to Halloween.

Heheh, a guy would have to be a madman to want to mess with me. I think I'll bring a baseball bat and a

glove to make the bat legal.

We don't have any Waffle House restaraunts around here. I'm going to hit the one in Chambersburg, Pa for

sure. On the way home I stopped over to the Salvation Army for a small pot and some Bar-B-Que tools

and then back home. Up here in New England we call em Cook Outs. I really like going over to the

Salvation Army. The prices are good and the people that work there are very nice. I'm going to abandon

this truck and everything in it cept for the radios. when I get to the left coast so I can't see sinking a lot of

money into camping supplies. I'll probably try and find some migrant Mexican worker who needs a truck

and just hand it over. Jesus told me if I give the truck away when I get to Pacific side he will make sure I

have a safe journey. I really like that Jesus too. I got no idea why I'm painting it except I don't want

everyone I meet across America to think I'm TTT - total trailer trash. Also some Jose who gets the truck

maybe happier if his truck has a nice paint job on it.

One thing I reeeally reeeally hate is Mexicans thinking they can just waltz in here and start picking fruit and

vegatables on a whim. I once said we should break out the weapons and leave piles of dead Mexicans on

the border. Or invite em in and make real Mexican tacos out of em if you know what I mean. Perhaps set

up machine guns on the border that people could access over teh internet with credit cards. That line of

thinking is a little extream and I want to make a public apology for even saying it. The fault is with Clinton

and Bush and the gov't, not the poor Mexican trying to make a better life for his children. There is a large

and growing faction of Mexicano Pistoleros who are involved with drug trafficing that presents a totally

different problem. I think we should reak out the weapons and leave piles of dead Mexican Pistoleros on

the border.

You can see the difficult years on the faces of the shoppers over there at the SA - Salvation Army.. You just

know they have quite a struggle to eek a living out. I prey that Jesus will watch over those nice people.

Heheh, the lady in front of me at the check-out line pulled a visa card out and charged almost 100 bucks for

clothes for her kid. As I was walking out of the store I could see her pull out of the parking lot in a brand

new SUV.

The wife was home when I got there and we went over to the local antique mall for a small wood box I'm

trying to locate. I build these big antennas called loops and they have a tuning capacitor mechanism that gets

hooked into the thing. I'm going to take a few loops with me on my journey, but only one tuning mechanism,

and I want to stick it in a nice box if I can find one. Some Anal Orafice that lives around the corner from

me is on my ass when I'm heading over to the antique mall. I gotta slow way way down to make a left turn.

Nobody in sight except the bunghole behind me. The wife giggles and tells me he had a scowl on his face

and didn't look too happy going by me. That douche bag needs to eat some bumper. Couldn't find the

exact box I needed so I told my wife she needs to build a woodshop in the extra room in the basement. I

got my electronic workshop, ham radio shack, and weight lifting room tying up the rest of the basment, but

there is enough room left for a nice little shop for her to do wood crafts. I think I will make it a point to

make sure she gets all set up there when I get back. She deserves a nice space to do what she likes. And I

need a place and a somebody to refinish old radio cabinets, so I'm all for a nice little shop over there. Hell, I

got her that damn kidney transplant so I figure she can pimp out a few radio boxes for me. Did see a nice

radio over there at Biz's father's booth in the antique mall. Damn if I can remember the name or model of

that radio though. Biz is the cutest little button of a girl you could ever meet. A real peanut. She used to

work for my wife at the Sir Charles Hallmark store before she went off to college. And her parent's are

very very nice as well. If ya ever feel the need to clone some people then these'd be the ones.

So when we get home the sun is peeking out so I grab a quart of my Rustoleum Battleship Grey equivalent,

and a small 4" roller with a 3/16" pile and get to work on the driver side. My compressor broke down so I

figured I'd give the roller topology a try. I sanded and rubbed out the hood last week and you would have a

hard time telling it was done with a roller. Got to reduce it 20% or so so it lays down nice and make sure it's

cool when you do roll it. I get the thing about rolled out and I have to pop open the hood to get the top of

the fender without painting the hood, which I painted last week, and what do you think I see? The shiny foil

gets my attention and I pull that potato out. I head into the kitchen and cut that baby open. I slobbered

some butter on that baby and let me tell you that was one of the best doggone baked potaters I ever had. It

wasn't cooked 100%, but I ate the 3/4 of that spud that was cooked all the way through with a big shit

eating grin on my face. I'll be cooking manifold potatos all across America starting next week.

I find myself owning more and more portable shortwave radios as time goes on.

Usually they are ones that I discover in my travels and after checking reviews, I end up owning them.

To approach this trend in a different angle, I thought I would ask the advice of the group of what radios are worth actively chasing?

In the group's opinion, what is (are) the BEST portable shortwave radios that have been manufactured in the last 30 years?

Thanks for your advice.

I had been on ebray since they billed via postal mail and gave $10.00 credit to start

you out.

Recently I had the wonderful experience of having paid my ebay via Payless Pal and when

I went to pay the small bill.. a few bucks. THEY made an 8 cent error in the

bill transfer and so I figured they would just bill it on the next months cycle.

BUT! What they did was to debit a closed bank account.

I had opened a checking account to get a Payless Pal account and closed

it so my real money was never in jeopardy. So what the idiots had done then was

to bill me an additional $15.00 for a bounced debit they should have never made.

In the mean time ebray has gotten so big I could not get any 'Real response from a

Real person' Like dealing with the government! I could find no Phone number to

call and explain THEIR ERROR.

I just kept getting junk Spam replies from ebray.

It makes them feel good telling me I can not use ebray. pftpftpft!

So I have since closed my ebray account.

AND my Payless Pal account a soon as I heard ebray had bought them.

For several months ebray kept billing me with additional "late charges"

HA HA ebray and Payless Pal get stuffed!

All over 8 cents they have lost a lot more than that in business since I am also

disabled and did shop over 100 items on ebray. It WAS convenient to use

and not walk through so many flea markets and hamfests. My rating WAS over 98%

Couldn't please everyone, and some sent me junk from trash cans smell and all . lol

Thanks for the vent.. off my soap box now and shopping elsewheres. :-p

2653. Jesus, Myth of history or Son of God ?

Newsgroup: rec.radio.shortwave
Date: 2006-09-24 17:58:10 UTC
From: Acrux <mailfree@lorenzocrescini.it>
Message-ID: <1159120690.617932.287190@m73g2000cwd.googlegroups.com>
Source record: 92729

My name is Lorenzo Crescini. I am a Captain of the merchant Navy now
on retirement.
When I was a secular missionary in an African leprosary, I wrote some
Flashes on the Holy Gospels which helped a lot of people by giving
them new trust and hope. You will find them in web site

www.lorenzocrescini.it/holygospels
E mail:
ricercapap@lorenzocrescini.it

Here are the first three Flashes as an example
1. There is the historical proof the myth could not invent the Cross .
If the Cross roused a "social orror" by the heathens ,it caused a
shocking religious dismay by the Jews. It is not a case that the first
christians in order to avoid that the preaching might be
jeopardised.,represented the Cross by an anchor ,a plough, a mast, a
man praying with open arms.How can we think that this way of dying was
put in the myth by the christians themselves ?

2. Should somebody tell us of having seen a dead person on the cross
resuscitated, nobody would believe him. But if the same person stating
that could also make miracles, then we would believe him. That happened
to the Apostles who got the power of making miracles in order to be
believed. Without that power, Christianity couldn't have been born.

3. Jesus says on the Cross: "My God ,My God ,why did You abandon me ?
Such words might even shock the reader. Why should they have been
written if they weren't true,then ?

2654. CFRX 6070- an easy QSL

CFRX 6070 khz uses a Harris !kw transmitter to relay the programs of
CFRB Toronto 1010 khz. QSL's are handled by
the Ontario DX Association, 155 Main St. N. , Apt 313
Newmarket, Ontario, Canada, L3Y 8C2
reports can also be sent by email to
<http://www..odxa@rogers.com>
CFRX is heard mainly in the north-east in daytime and goes long skip at
night but it is always on.
Their website is: <http://www.odxa.on.ca/> and it has lots of
information and links.

The website given below states that they use an Elcom-Bauer 701B-HF transmitter.

So you closed a bank account and didn't tell PayPal? This whole mess is
your fault.

eBay is the best. I've bought hundreds of items worth many thousands of
dollars. Most of it could never be found locally for the same price.
Anytime I'm looking to buy *anything*, I look at eBay first.

Most of the Bauers were kits, built on site by the station engineer. This
would indicate the transmitter is around 35 years old, and probably failing.

I've heard stories, though I can't remember if it was about the station that
relayed CFCF radio here in Montreal, or the Toronto station.

But I thought both stations would be off the air by now. I'd say it's
pretty definite for the Montreal relay, given that CFCF doesn't even
exist anymore.

But these sorts of relays likely have been around for decades, from
a time when they might have had some purpose, and just kept going
through lethargy. The company has likely changed hands a few
times, nobody around knows about it, etc, etc.

So yes, if it really is still transmitting, it likely gets
no attention and when something fails, likely that's it.

Michael

It must be very difficult never having ANYONE listen to you. That makes it very difficult to be an officer in the Navy (or in your case, the American Taliban). That life of quiet desperation has made you an evil and bitter old man.

At least you have the May 24th trash pickup to look forward to. I understand it's the high point of your social calendar.

In the mean time, you really should go here:

http://www.drug-rehabs.org/drug-rehab.php/Holland/Michigan

Taking cuhulin along for the trip is strongly recommended. The following explains why he now wears a size 'C' bra. Is that even LARGER than your own?

==========
In menï¿½ chronic heavy drinking causes imbalances in hormone levels. Alcohol effects the centers in the brain that trigger testosterone production, as well as liver problems which impairs the liverï¿½s ability to metabolize female sex hormones. As a result increased levels of female hormones and decreased levels of male hormones can lead to ï¿½feminizationï¿½ (breasts enlarge, testicles shrink, and thinning of body hair).

http://www.soc.ucsb.edu/sexinfo/?article=difficulty&refid=020
==========

You WILL thank me later.

mike

The radio input impedance is a separate issue.

Re-quoting RHF post I specifically object to the following.

> > * Use a Balun with a Dipole Antenna Another 'improved' Shortwave
> > Listening (SWL) Antenna design would use a Balun {Matching
> > Transformer} between the Dipole Antennaand the Coax Cable
> > feed-in-line. This is most often a 4:1 {Four-to-One} Matching

> > frequency range then simply using a Dipole Antenna that is directly
> > connected to the Coax Cable.

> > - - - The direct conneted Dipole Antenna is great for Hams
> > working on a single Shortwave (HF) Frequency Band.

RHF wrote about matching a dipole.
I wrote about matching a folded dipole in a follow up to his post.
A dipole is around 72 ohms and a folded dipole is around 300 ohms.

****

There are three items involved, antenna, transmission line, and radio input impedance. They all have to match. The 4:1 BALUN is incorrect to match a dipole to 50 ohm coax what is happening on the other end of the coax does not change this relationship. The closest easily attainable would be a 1:1 BALUN. All impedances need to match or you have reflections and the signal that the antenna picks up will only partially be used by the radio input.

If the 50 ohm coax to radio input is an issue then you need another transform between the coax and radio input. Most radios have a 50 ohm input. Generally, you can figure this out by the connector used. On most radios the radio input may not be right at 50 ohms but will be somewhere in that area over the 3 to 30 MHz input range.

> better than the 2100, but not *always*.

You are comparing two radios with different circuitry and
specifications. What you are seeing (hearing) is most likely a
difference in radio performance. Speculating for a moment I could guess
that the 2100 might have greater dynamic range or maybe a faster AGC
that can follow the a rapid fade over the SAT 800 but there is no way I
can understand the statement that precise tuning can equal using sync
detection. Using a standard AM detector and tuning a station spot on
compared to being slightly off tuned is not going to make an
improvement in a fading signal that using a sync detector is going to
make.

Generally, I have found that precise tuning allows a sync detector to
maintain lock on a weak signal.

Nope... closed account ebray opened with that was used long ago.
Was active via Payless Pal till they made a mess of it all so I closed that
account
so they couldn't rob me just for THEIR 8 cents MISTAKE. Plus their
withdraw
penalty, plus their late fees. UGH!
Had they replied with an 8 cent request there was more than 8 cents in
my Payless pal account at the time. Just as reasonable as the Gvnmt LOL

Just the same as auto deposit from anyplace... they have access to get what
ever they want and you have to litigate it to get your own money back.
Being on SS disab' I'd starve before I got my money back if any were taken.
I never trust them with my whole paycheck.... I wonder why anyone does.
Oh!.... That's so they can get in the news by being e-robbed. Phished etc.

Good luck Y'all

I also keep my Norton AV etc up to date and turned on ALLWAYS

To all radio enthusiasts and members of the group,
Hey guys and gals, you are all invited to join the "radio_programming"
group in yahoo groups. To subscribe, just sent an email to:
radio_programming-owner@yahoogroups.com

I'm the group moderator and as a reward, I'm giving away some freebies
here :)
http://groups.yahoo.com/group/radio_programming/files/
If what you are looking for is not in the list, don't hesitate to drop
us an email. We might be able to point you in the right direction to
get the latest software or programming utilities.

Also we have RADIOS FOR SALE ! We got radios from Kenwood (TK models),
Icom (IC models) and Motorola (HT & XTS APCO-25 models)
Contact us at radio.programming.owner@gmail.com for all your
programming needs and radio equipments!
Thank you for your time..

Pirate Radio Stations Challenge Feds
-by- Martha Mendoza - The Associated Press
Sunday, September 24, 2006; 12:28 PM
http://www.washingtonpost.com/wp-dyn/content/article/2006/09/24/AR2006092400290.html

http://www.washingtonpost.com/wp-dyn/content/article/2006/09/24/AR2006092400290_2.html
The FCC's beef, insisted spokesman David Fiske, is with neither the
public dissent nor the abundance of Frank Zappa music. The problem is
that pirate radio stations can make it impossible for the public to
listen to licensed broadcasting and can cut into air traffic control
communications, he said.

"We are completely complaint driven," he said. "If there are more
enforcement actions, that's because there have been more complaints."

2695. Kenwood R5000 lithium battery

Newsgroup: rec.radio.shortwave
Date: 2006-09-25 08:40:41 UTC
From: nospam@nospam.com
Message-ID: <q65fh2t6ahnsl11lhn4bhrp7o6obup5jiv@4ax.com>
Source record: 92875

Has anyone successfully used a CR2032 for the memory battery in the R5000? Similar questions have been asked and covered here and elsewhere, and while some said this one is not rechargable, I can't find any posts saying the CR2032 is OK.

The correct part is difficult to get here, and QST for July has an article covering adding solder tabs to a 2032 for use in a TS940, so if it will be OK that is a good option.

Guess that's kinda up in the air since the 701B was introduced in 1973 and hard to say whether they continued to make it or not. The company, Elcom-Bauer, continued at its California plant until 1993.

CFRX has had occasional problems over the years, and this is certainly not the first time they've been off for a bit.

After Chris Wallace asked a judgemental question on Fox News Sunday,
Bill Clinton showed Wallace for the uninformed neocon that he really is.
IT WAS WONDERFUL!!! Conservative TV was used to expose the truth about
neocons like Wallace, making the whole appearance deliciously ironic.

This morning, Fox is spinning the story like crazy. Bwa HAHAHAHAHAHA!

I'm looking to replace the computer at my listening post, and would like to find out if any certain brand of computer is known to have a low RF output. I get a lot of noise on the SW bands from my existing PC (Micron) and leave it off most of the time, which defeats the purpose.

What I'd like to do is replace with a low RF and acoustically quiet model, and then get a flat-panel LCD screen and wireless keyboard and mouse. Any problems with RF noise from wireless devices such as those?

Comments, experiences, etc. all welcomed.

And clueless wonders like you have nothing to say about the thousands of "judgemental" questions asked over the past oh-so-many-years by liberal TV and newspapers? It already appears the loony left is spinning Clinton's utterly classless appearance and doing their usual "conservative Fox" routine after saying zippo about biases in CBS, NBC, PBS, the NYT the WaPo, etc.,etc., etc., etc., etc. for years. After all, just because Clinton's response to terrorism was to bomb an aspirin factory is no reason for him to show the nation that he's a petulant baby .

2725. Degen DE11 vs Tecsun PL200, any opinions?

Newsgroup: rec.radio.shortwave
Date: 2006-09-25 20:17:15 UTC
From: dunxuk@aol.com
Message-ID: <1159215435.342170.259770@e3g2000cwe.googlegroups.com>
Source record: 92900

Ok, my PL200 is cheap and cheerful but has been a good pocket radio and I've had no problems with it but unfortunately it has been dropped too many times. SW is handy but it mainly gets used on MW.

I was thinking about getting another one but the Degen / Kaito looks very similar. Does anyone have any experience with one of these? I don't need stronger reception but the Tecsun is a bit clunky and awkward, and has bad hiss on AM though earphones. I was considering the DE1102 but I'd rather have a slightly more conventional radio at the cost of a little performance, and it's a bit larger.

Many thanks everyone!

Islamofascism ... Bush Is on to Something

By Daniel Mandel
Dr. Daniel Mandel is a Fellow in History at Melbourne University and author of
H.V. Evatt and the Establishment of Israel: The Undercover Zionist (Routledge,
2004).

When speaking of today's affairs, are historical analogies and allusions helpful? Several commentators think not, at least when it comes to US President
George W. Bush's recent references to "Islamofascism." Washington Post columnist
Eugene Robinson has argued that "the jihadists are pretty much sui generis - they aren't fascists or Nazis and certainly aren't communists." Center for Strategic and International Studies security expert Daniel Benjamin agrees - "
The people who are trying to kill us, Sunni jihadist terrorists, are a very, very different breed."

Very different, perhaps, but in what way? Dictionary.com defines analogy as "
Similarity in some respects between things that are otherwise dissimilar." The
key therefore is not that two things can be shown to be different, even very different, but rather that their similarities can be demonstrated to be significant.

Fascism differs from Islamism most obviously in its glorification of the state,
its sometimes covert but firm rejection of religion and its preoccupation with
racial exclusivity. It is for these reasons that some scholars of Islam have found it more useful to compare Islamism to Marxism-Leninism. Here, too dissimilarities exist - most obviously the Marxist-Leninist radical rejection of
religion.

However, where all three can be said to be similar is in their pursuit of a utopian re-ordering of the world; a willingness to use unbridled violence and
terror to bring it about; and in anchoring justification for the consequent barbarism in immutable, iron laws. Consequently, all three have claimed to know
where history is, or should be, headed and decreed the complete obliteration

of
all opponents - whether whole classes, peoples or states - as the necessary and
beneficent prelude to an epoch of orderliness and justice.

All this is reasonably well known and acknowledged today of fascism and
Marxist-Leninism, but was not at the time. An interesting analogy with the 1930s
therefore lies in the fact that today, too, it is hard to obtain similar
acknowledgment about Islamism.

In a penetrating but largely forgotten analysis of the mainsprings of
anti-Semitism entitled The Great Hatred (1940), Maurice Samuel observed that
liberals and conservatives in the 1930s commonly failed to see in anti-Semitism
anything more than an ordinary bigotry and political manoeuvre issuing from
certain local grievances and economic conditions. In fact, anti-Semitism was
central to Nazism's assault on the Judeo-Christian values under-girding Western
civilization.

Samuel argued that whereas Christianity can be subverted internally or uprooted
externally, the Jews stand for better or worse as eternal representatives of
that which totalitarians wish to destroy. Thus the extraordinarily lurid Nazi
hatred and fantasies about Jews - rife today in much of the Muslim world - that
would never obtain a hearing if spoken about any other people. A totalitarian
temptation seems built into modern life and thus the anti-Semitism common to
such ideologies has always found a certain receptivity even in democratic
societies.

The failure to comprehend this was perhaps the most profound factor in blinding
the democracies to the demonic quality and implacable belligerence of Nazi
Germany. But for this failure, the democracies in their own interest probably
would have moved swiftly to deter or defeat the Axis Powers when that course was
still relatively easy. They didn't, because they hadn't penetrated to the heart
of anti-Semitism and the danger inherent in it for themselves - much like
today's pundits, who similarly speak of the Middle East in 1930s terms of
"legitimate grievances," "self-determination" ad nauseam.

Putting aside a hundred Islamist sermons and speeches about destroying America
and subduing the West, the demonic quality of Islamist anti-Semitism should be
therefore an unmistakable warning signal.

When Iran's leadership prepares to arm with nuclear weapons and speaks openly of
Israel as its intended target; when Ahmadinejad speaks as Hitler did of destroying Jews collectively; when his Lebanese satrap, Hassan Nasrallah, observes that "If [the Jews] all gather in Israel, it will save us the trouble
of going after them worldwide", and when Hamas dedicates itself in its Charter
to the elimination of Israel (Article 15) and the murder of Jews (Article 7),
something more incisive and discerning is required than fastidious differentiation between ideologies.

Affirming that Islamists are totalitarian while discounting all past manifestations of totalitarianism as irrelevant empties the term 'totalitarian'
of any meaning that can inform readers of the danger and significance of Islamism.

Accordingly, for all its obvious shortcomings, Bush's reference to "Islamofascism" has merit. For reasons that are indeed similar to those of the
1930s, peace has proved elusive, conflict is brewing and the only question is if
the democracies will again allow themselves to be gulled into sleep on the eve
of a supreme test.

==========
\Greetings. Hope this formats ok.

I was taking a shower this morning and I slipped and I fell and I hit
my head on the tub. I hit it pretty hard

too and I think I must have been lying there for quite a while. Ya
see, I missed church I was lying there so

long. Mass was at 10 o'clock this morning and I'm fairly certain I
woke up at 6 am. I have this little Degen

DE1103 shortwave radio with a built in alarm clock that wakes me up
everyday at the same time. 6 am.
When I finally woke up I had a splitting headach, probably the worse
one I ever had in my whole life, and

these visions of potatos wrapped in tin foil and cooking on the
manifold of my battleship grey 1986 Dodge

D100 pickup truck. Hell, if I had a pistol in my hand I probably
woulda stuck that thing in my mouth and let

one rip just to get rid of that doggone headache. Anyway, trucks got
one of those slant six motors that

everybody says'll go a million miles. So with that slant six there is
only one exhaust manifold. It's kinda stuck

up there near the top of the motor with the intake manifold. Ya
following me so far? This truck here I'm

speaking of - it's not all battleship grey. A lot of it is, but there
still remains most of the passenger side to

paint which is still the color it was when I got it from Linda Brown.
A darker flavor of grey, quite a bit

If you could afford, get a Tempest certified PC, failing that, try to
find one that meets FCC Class B standards. The A standard is pretty
noisy, and I have never seen a CRT that says it is class A, actually
meet the Class A standard (and I've spent a lot of time on an FCC
certified Test range). CRT's are the main culprit. The saw tooth
horizontal oscillator output is a fabulous interference generator.

2736. Follow up on my RFI hunt info

I mentioned my noise probes once before.

A friend wanted real measurements instead of the vague discription.
OK.

My first unit is 29 turns of solid PVC insulated wire on a PM-10 (1
3/8"
diameter) pill bottle with a female BNC mounted in the top.

The next unit is 2 turns inside the same sized pill bottle with a BNC
in the cap.

One nice unexpoected aspect is the ability to use another pill bottle
screwed
on the no child proof cap threads, this makes a handy, but bvery cheap
handold for the probe.

The last one came about because I needed to find the noise source
inside a
linear power supply. This is a ferrite core 100uH in a "Sharpie Fine
Point" with
the coil at the blunt end and a BNC female in the open end where the
colored
plastic insert is force fited..This one is great for sniffing for RFI
at the component
level once the offended equipment is located.

There is nothing special about these coils, they where built with what
I had on
hand. Other values would very likely work as well. A 10Uh might well
have been
a better choice for the last probe, but I didn't have one at hand. I
ight build one
with the 10uH to see if there is any significant difference between the
100u and
the 10uH coils.

I tried Telemons suggestions of a simple stub probe, but found the
coils to
be more effective in my searchs.

I use a DX398 with a 6' 3.5mm to BNC coax.

I have found it useful to start at the fuse/breaker box and turn off
every breaker,
then turn them on one at a time, with the 19uH probe held near each
breaker

as I turn it on I can usually locate the noisest soruce. It may, so far always has,
take several passes to find every on home noise source.

This simple set of tools allows me to verify that my steps at RFI reduction are
effective. I have mentioned W1HIS Common mode PDF before, but I must say
Chuck has gone to a lot of trouble to solve "common mode noise". My simple
probe is usefull to see if I have knocked the noise down enough.

Here is a story I found today and thought I would share this with the group. Although I don't wholly agree with the article, you have to admit the pace of competing technologies is quickening.

Here is an IHT story predicting the end of short wave radio:

http://www.iht.com/articles/2006/09/24/business/radio25.php

Below is the full article:

Shortwave-radio era looks short-lived

By Doreen Carvajal International Herald Tribune

Published: September 24, 2006

PARIS Perhaps it is fitting that a 50-second video clip of an ear-shattering explosion of 13 shortwave radio antenna towers on the Spanish Costa Brava is getting viewers on the Web site YouTube.
It took 32 pounds, or 14.5 kilograms, of dynamite to fell the massive antennas, which long relayed news from the United States to the former Soviet Union. But the most powerful force behind the demolition was the rapidly shifting landscape of radio, where listeners are migrating toward MP3 players, Internet radio and podcasting.
The felling of the towers was the latest noisy outburst of a cost-cutting trend that is silencing the familiar and crackly shortwave voices that leap across the globe through the clear night sky in times of crisis and Cold War, tsunami and Thai coup.
In January, the Finnish public broadcaster YLE will end all of its shortwave broadcasts with the goal of saving money and diverting resources to online news services.
Next month, Germany's public broadcaster, Deutsche Welle, will end its German-language shortwave broadcasts aimed at Canada and the United States.
The Japanese public broadcaster, NHK, and the Korean Broadcasting System are also reducing shortwave services.
The leading international broadcaster, the BBC World Service, is pursuing a diversification strategy that regards the future in stark terms. "Audience needs are changing and technology is moving rapidly," reads the news service's explanation of its strategy through 2010. "Shortwave is also declining at a fast pace and if we don't change, we will die."
Critics of the retreat warn, however, that shortwave is the most reliable communications medium of last resort. They point out that it can allow determined broadcasters to reach across borders even when repressive national regimes halt FM broadcasts, block Internet sites and

jam television programming.
"Shortwave does not respect boundaries and reaches the rich and poor," said Graham Mytton, former head of the BBC's audience research unit and now a media consultant. "Most international broadcasters think things are driven by technology, but not entirely. They're driven by politics and local media circumstances. Their mistake is they downplay shortwave because they're living in developed societies. But they don't go to rural areas like Nigeria, where everyone has a shortwave radio."
Smaller international broadcasters with more limited resources are phasing out shortwave entirely. Slovak Radio silenced its shortwave programming in July, and Swiss Radio International ended shortwave broadcasts two years ago to transform into an online news service, www.swissinfo.org.
In the meantime, all of the world's largest international broadcasters, from the United States, France, Germany, England and the Netherlands, are cutting back or reviewing precious resources devoted to shortwave radio.
"The future of shortwave radio is quite clear," said Guido Baumhauer, director of strategy and distribution for Deutsche Welle, or DW, in Germany. "It's all going down when it comes to the consumers."
With the average age of its shortwave listeners hovering at about 50, DW expects to save more than ï¿½10 million, or $12.78 million, a year by reducing shortwave services, according to Baumhauer, who said the money would be invested in other services like Internet radio and podcasting.
The state-subsidized broadcaster is phasing out shortwave programs for North America and the Balkans and reducing daily transmissions of shortwave programs to 160 hours from 200.
"In the U.S., if people are really into German they have so many other ways to get consumer information," Baumhauer said. "Considering the costs related to the transmission, there's no point in continuing."
The history of shortwave radio dates to 1927, when Philips Laboratories of the Netherlands transmitted shortwave broadcasts from Eindhoven to the Dutch East Indies.
The BBC trailed behind with the founding of the BBC Empire Service in 1932.
Shortwave radio provided a vital alternative voice in wartime Europe. Radio Oranje, for example, was set up in London after the German occupation of the Netherlands to broadcast uncensored news. Through the Cold War years, international broadcasters used shortwave to shout over the Iron Curtain.
While held in his luxury villa during an attempted coup d'ï¿½tat, the former Soviet leader Mikhail Gorbachev listened to shortwave transmissions of the BBC and Voice of America.
But after the Berlin Wall fell and new media forms flourished, there was less need for shortwave transmissions in developed countries.
International broadcasters like RFI of France and the BBC started striking hundreds of partnership agreements with local FM stations to rebroadcast their programs with clearer sound.
With the advance of technology, it has also become increasingly difficult to say what a radio is, since it can be distributed through digital television, mobile phones, computers or satellite radio, according to Michael Mullane of the European Broadcasting Union for

public broadcasters in Geneva.
The BBC eliminated its North American shortwave transmissions in 2001, when there were still an average of more than two million listeners. But with FM rebroadcast agreements with local stations, the BBC now has five million listeners in Canada and the United States, according to Michael Gardner, a spokesman for the BBC.
The BBC is constantly reviewing its expenses in connection with shortwave radio, he said, but in the meantime, the news service still reaches two-thirds of its weekly 163 million radio listeners through shortwave.
This year, the BBC actually posted an increase of about five million shortwave listeners in rural areas of Africa and Asia, but Gardner says the increase amounted to existing listeners who were surveyed for the first time in Myanmar.
David Hollyer, former managing director in Spain for the U.S. government's Radio Free Europe and Radio Liberty, is wistful about the long-term consequences of mothballing and destroying shortwave transmitters. The transmitters in Spain, he argued, could have been deployed to broadcast to Central Asia to reach a Muslim population.
Instead, with the changing political climate, U.S. authorities closed the station in 2003, ended its lease, and turned over the towers to Spain. When Hollyer watches the amateur YouTube video of the familiar towers crumbling in clouds of smoke, it reminds him of an Edwin Markham poem. "To paraphrase," he said, "the towers went down with a great shout upon the hills and left a lonesome place against the sky."

Does the name Rick Upchurch ring a bell with any of you?
A little known fact is that when she was attending the University of
Denver, Condoleezza dated the Denver Broncos receiver for a while.
Do a little research, it is real easy to find facts on the Internet.

Then why, according to the latest CNN poll do 60% of the American
people still prefer him to Bush at 42%! I would have thought that
after 12 years of mismanaging the country and 6 years of mismanaging
the White House that you and the other neocons would get that the
people are tired of you.

Source record: 92940

- Yes - Basically the 300 Ohm to 75 Ohm
-TV type Matching Transformer is a Balun.
-
- iane ~ RHF

And... yes some Shortwave Listeners (SWLs) have made a
very low cost and basic Shortwave Listening (SWL) Antenna
from TV type Parts :

1 - Wire Antenna Element - Using 300 Ohm Twin Lead.

Configured as {Shaped Like} :
* Dipole Antenna with Two Equal 50% / 50% Arms
* Windom Antenna with a Long 62% Arm and Short 38% Arm.
* Loop Antenna and wired as either a Series Two Turn Loop
-or- a Parallel Two {Twin} Wire Loop.
* Horizontal {Flat} Antenna
* Inverted "L" Antenna with an Up-Leg 33% and Out-Arm 67%
- - - All of these Antennas are for the most part built to fill the
Avaliable Space and thus are simply Random Wire Antennas.

2 - Balun - Using a 300 Ohm to 75 Ohm TV type
Matching Transformer.

3 - Feed-in-Line - Using 75 Ohm Coax Cable with "F"
Connectors as the Antenna's feed-in-line.

4 - Using an "F" Connector to PL-259 Plug Adapter to connect
the 75 Ohm Coax Cable to the Shortwave Radio's SO-239 Jack.
-or- Using a second TV type 75 Ohm to 300 Ohm Matching
Transformer to connect the 75 Ohm Coax Cable to the Shortwave
Radio's Twin {HI-Z} Terminals.

yes it is that simple - iane ~ RHF

2769. Shortwave Listener (SWL) Newbee Question - Is My Dipole Antenna Set-Up Right ?

Newsgroup: rec.radio.shortwave
Date: 2006-09-26 03:13:01 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1159240381.896382.45690@h48g2000cwc.googlegroups.com>
Source record: 92944

- The radio input impedance is a separate issue.
-
- Re-quoting RHF post I specifically object to the following.
-
> > * Use a Balun with a Dipole Antenna Another 'improved' Shortwave
> > Listening (SWL) Antenna design would use a Balun {Matching
> > Transformer} between the Dipole Antennaand the Coax Cable
> > feed-in-line. This is most often a 4:1 {Four-to-One} Matching
> > Transformer. Using the Balun will better 'match' the Dipole Antenna
> > to the Coax Cable feed-in-line and the Receiver across a wide
> > frequency range then simply using a Dipole Antenna that is directly
> > connected to the Coax Cable.
> > - - - The direct conneted Dipole Antenna is great for Hams
> > working on a single Shortwave (HF) Frequency Band.

- RHF wrote about matching a dipole.
- I wrote about matching a folded dipole in a follow up to his post.
- A dipole is around 72 ohms and a folded dipole is around 300 ohms.
-
- ********
-
- There are three items involved, antenna, transmission line, and radio

- input impedance. They all have to match. The 4:1 BALUN is incorrect
to
- match a dipole to 50 ohm coax what is happening on the other end of
the
- coax does not change this relationship. The closest easily attainable

- would be a 1:1 BALUN. All impedances need to match or you have
- reflections and the signal that the antenna picks up will only
- partially be used by the radio input.
-
- If the 50 ohm coax to radio input is an issue then you need another
- transform between the coax and radio input. Most radios have a 50 ohm

- input. Generally, you can figure this out by the connector used. On
- most radios the radio input may not be right at 50 ohms but will be
- somewhere in that area over the 3 to 30 MHz input range.
-
- --
- Telamon
- Ventura, California

Telemon,

Everything that you say is true -HOWEVER-

1 - The Dipole Antenna is very good for a specific single frequency
-and- most Shortwave Listeners (SWL) are tuning across the
entire range of the Shortwave Band (HF) from 1.8 MHz to 30
MHz and the majority are also using the same Antenna for
AM (Medium Wave) 530 kHz to 1700 kHz Listening too.

2 - The Folded Dipole Antenna is a good choice for the Shortwave
Listener (SWL) -but- it is effectively a 'spoiled' Antenna : Not Very
Good on any one frequency -bu-t some-what-good across the entire
range of Shortwave Frequencies.

3 - This is where the use of a Matching Transformer comes into
play with a : Dipole Antenna, Inverted "L" Antenna, Sloper Antenna,
Random Wire Antenna, Windom Antenna or a Loop Antenna.
- - - The Matching Transformer be it a Balun or UnUn can take
a good single frequency Shortwave Antenna and 'transform' it into
a Not Very Good on any one frequency -but- some-what-good
across the entire range of Shortwave Frequencies Antenna.
- - - The Matching Transformer effectively 'spoils' the Antenna.

Note - The Sensitivity and dynamic-range of most modern
Shortwave Radio makes up for this 'spoiled' Antenna.

FWIW - What I am saying (writing) is not the pure science
of Shortwave Antennas and clearly is not technically correct.
-But- For the Shortwave Listener (SWL) it generally provides
a single Shortwave Listening (SWL) Antenna that 'works'
reasonably well across the enter Shortwave (HF) Band.

LOW NOISE ANTENNA DESIGN CONCEPTS:
Uses a Random Wire Antenna Element coupled via a 9:1
Matching Transformer at the Near-End of the Antenna with
a Ground Rod and Coax Cable feed-in-line to the Receiver.
This is basically an Antenna that uses the "Low Noise Antenna"
'design concepts' that were popularized -by- John Doty.

---

1. You do realize that "polls" can be "directed" any way they want the
numbers to show.

2. I do not believe those poll numbers at all.

3. Most people I am around (midwest) are so sick of hearing about
Clinton they could spit.

4. I have my beefs with Bush too, but on the war on terrorism I believe
it must be won.

5. We are in the best economy in this country in many years.

6. It has been over 5 yrs. since this country was attacked (coincidence)?
I dont think so.

7. Much of what Clinton said in that interview was patently false.
i.e. Richard Clark was not demoted, fired or anything else.
Hint: its in the book.

8. Those poll numbers you cite are nothing more than proof of how
easy it is to fool people, of which Clinton was a master of.

9. Clinton lied again in the interview. He said Al Queda wasnt even
known about during most of his presidency.... Uhhhh the WTC
was bombed in 93 by people with links to Al Queda. The USS
Cole almost sunk by members of Al Queda. Which just confirms
that he is/was a pathological liar... since he believes his own BS

10. His basically allowing the Chinese to gain access to our W 51 missile
targeting technology is traitorous. Im sure he got a huge chunk of
cash from the Chinese for that one. I could go on and on but why
bother.

I think the price of the DE11 is too high based on what it gives you. The Tecsun PL200 is full-featured, receiving all of the 3-30 mhz shortwave spectrum, but it is a single-conversion radio.

The Degen 1102 and 1103 are near the price of the Tecsun PL200. The 1102 and 1103 include dual-conversion reception (to eliminate wrong-frequency images), and ssb (to decode amateur, utility, and various other broadcast modes). To learn more about some of these radios, see the reviews section at www.radiointel.com .

A textbook definition of cowardice
Keith Olbermann comments on Bill Clinton's Fox News interview
By Keith Olbermann
MSNBC

The headlines about them are, of course, entirely wrong.

It is not essential that a past president, bullied and sandbagged by a monkey posing as a newscaster, finally lashed back.

It is not important that the current Presidentï¿½s portable public chorus has described his predecessorï¿½s tone as ï¿½crazed.ï¿½

Our tone should be crazed. The nationï¿½s freedoms are under assault by an administration whose policies can do us as much damage as al Qaida; the nationï¿½s marketplace of ideas is being poisoned by a propaganda company so blatant that Tokyo Rose wouldï¿½ve quit.

Nonetheless. The headline is this:

Bill Clinton did what almost none of us have done in five years.

He has spoken the truth about 9/11, and the current presidential administration.

"At least I tried," he said of his own efforts to capture or kill Osama bin Laden. "Thatï¿½s the difference in me and some, including all of the right-wingers who are attacking me now. They had eight months to try; they did not try. I tried."

Thus in his supposed emeritus years has Mr. Clinton taken forceful and triumphant action for honesty, and for us; action as vital and as courageous as any of his presidency; action as startling and as liberating, as any, by any one, in these last five long years.

The Bush Administration did not try to get Osama bin Laden before 9/11.

The Bush Administration ignored all the evidence gathered by its predecessors.

The Bush Administration did not understand the Daily Briefing entitled "Bin Laden Determined To Strike in U.S."

The Bush Administration did not try.

Moreover, for the last five years one month and two weeks, the current administration, and in particular the President, has been given the greatest ï¿½passï¿½ for incompetence and malfeasance in American history!

President Roosevelt was rightly blamed for ignoring the warning signsï¿½some of them, 17 years oldï¿½before Pearl Harbor.

President Hoover was correctly blamed forï¿½if not the Great Depression itselfï¿½then the disastrous economic steps he took in the immediate aftermath of the Stock Market Crash.

Even President Lincoln assumed some measure of responsibility for the Civil Warï¿½though talk of Southern secession had begun as early as 1832.

But not this president.

To hear him bleat and whine and bully at nearly every opportunity, one would think someone else had been president on September 11th, 2001 -- or the nearly eight months that preceded it.

That hardly reflects the honesty nor manliness we expect of the executive.

But if his own fitness to serve is of no true concern to him, perhaps we should simply sigh and keep our fingers crossed, until a grown-up takes the job three Januarys from now.

Except for this.

After five years of skirting even the most inarguable of factsï¿½that he was president on 9/11 and he must bear some responsibility for his, and our, unreadiness, Mr. Bush has now moved, unmistakably and without conscience or shame, towards re-writing history, and attempting to make the responsibility, entirely Mr. Clintonï¿½s.

Of course he is not honest enough to do that directly.

As with all the other nefariousness and slime of this, our worst presidency since James Buchanan, he is having it done for him, by proxy.

Thus, the sandbag effort by Fox News Friday afternoon.

Consider the timing: the very weekend the National Intelligence Estimate would be released and show the Iraq war to be the fraudulent failure it isï¿½not a check on terror, but fertilizer for it.

The kind of proof of incompetence, for which the administration and its hyenas at Fox need to find a diversion, in a scapegoat.

It was the kind of cheap trick which would get a journalist firedï¿½but a propagandist, promoted:

Promise to talk of charity and generosity; but instead launch into the lies and distortions with which the Authoritarians among us attack the virtuous and reward the useless.

And donï¿½t even be professional enough to assume the responsibility for the slanders yourself; blame your audience for ï¿½e-mailingï¿½ you the

question.

Mr. Clinton responded as you have seen.

He told the great truth untold about this administrationï¿½s negligence, perhaps criminal negligence, about bin Laden.

He was brave.

Then again, Chris Wallace might be braver still. Had I in one moment surrendered all my credibility as a journalist, and been irredeemably humiliated, as was he, I would have gone home and started a new career selling seeds by mail.

The smearing by proxy, of course, did not begin Friday afternoon.

Disney was first to sell-out its corporate reputation, with "The Path to 9/11." Of that companyï¿½s crimes against truth one needs to say little. Simply put: someone there enabled an Authoritarian zealot to belch out Mr. Bushï¿½s new and improved history.

The basic plot-line was this: because he was distracted by the Monica Lewinsky scandal, Bill Clinton failed to prevent 9/11.

The most curious and in some ways the most infuriating aspect of this slapdash theory, is that the Right Wingers who have advocated itï¿½who try to sneak it into our collective consciousness through entertainment, or who sandbag Mr. Clinton with it at news interviewsï¿½have simply skipped past its most glaring flaw.

Had it been true that Clinton had been distracted from the hunt for bin Laden in 1998 because of the Monica Lewinsky nonsense, why did these same people not applaud him for having bombed bin Ladenï¿½s camps in Afghanistan and Sudan on Aug. 20, of that year? For mentioning bin Laden by name as he did so?

That day, Republican Senator Grams of Minnesota invoked the movie "Wag The Dog."

Republican Senator Coats of Indiana questioned Mr. Clintonï¿½s judgment.

Republican Senator Ashcroft of Missouriï¿½the future attorney generalï¿½echoed Coats.

Even Republican Senator Arlen Specter questioned the timing.

And of course, were it true Clinton had been ï¿½distractedï¿½ by the Lewinsky witch-hunt, who on earth conducted the Lewinsky witch-hunt?

Who turned the political discourse of this nation on its head for two years?

Who corrupted the political media?

Who made it impossible for us to even bring back on the air, the counter-terrorism analysts like Dr. Richard Haass, and James Dunegan,

who had warned, at this very hour, on this very network, in early 1998, of cells from the Middle East who sought to attack us, here?

Who preempted them in order to strangle us with the trivia that was, ï¿½All Monica All The Timeï¿½?

Who distracted whom?

This is, of course, whereï¿½as is inevitableï¿½Mr. Bush and his henchmen prove not quite as smart as they think they are.

The full responsibility for 9/11 is obviously shared by three administrations, possibly four.

But, Mr. Bush, if you are now trying to convince us by proxy that itï¿½s all about the distractions of 1998 and 1999, then you will have to face a startling fact that your minions may have hidden from you.

The distractions of 1998 and 1999, Mr. Bush, were carefully manufactured, and lovingly executed, not by Bill Clinton, but by the same people who got you elected President.

Thus, instead of some commendable acknowledgment that you were even in office on 9/11 and the lost months before it, we have your sleazy and sloppy rewriting of history, designed by somebody who evidently read the Orwell playbook too quickly.

Thus, instead of some explanation for the inertia of your first eight months in office, we are told that you have kept us "safe" ever sinceï¿½a statement that might range anywhere from zero, to 100 percent, true.

We have nothing but your word, and your word has long since ceased to mean anything.

And, of course, the one time you have ever given us specifics about what you have kept us safe from, Mr. Bush, you got the name of the supposedly targeted Tower in Los Angeles wrong.

Thus was it left for the previous president to say what so many of us have felt; what so many of us have given you a pass for in the months and even the years after the attack:

You did not try.

You ignored the evidence gathered by your predecessor.

You ignored the evidence gathered by your own people.

Then, you blamed your predecessor.

That would be a textbook definition, Mr. Bush, of cowardice.

To enforce the lies of the present, it is necessary to erase the truths of the past.

That was one of the great mechanical realities Eric Blairï¿½writing as George Orwellï¿½gave us in the book ï¿½1984.ï¿½

The great philosophical reality he gave us, Mr. Bush, may sound as familiar to you, as it has lately begun to sound familiar to me.

"The Party seeks power entirely for its own sake. We are not interested in the good of others; we are interested solely in power...
"Power is not a means; it is an end.

"One does not establish a dictatorship to safeguard a revolution; one makes the revolution in order to establish the dictatorship.

"The object of persecution, is persecution. The object of torture, is torture. The object of powerï¿½ is power."

Earlier last Friday afternoon, before the Fox ambush, speaking in the far different context of the closing session of his remarkable Global Initiative, Mr. Clinton quoted Abraham Lincolnï¿½s State of the Union address from 1862.

"We must disenthrall ourselves."

Mr. Clinton did not quote the rest of Mr. Lincolnï¿½s sentence.

He might well have.

"We must disenthrall ourselves and then we shall save our country."

And so has Mr. Clinton helped us to disenthrall ourselves, and perhaps enabled us, even at this late and bleak date, to save our country.

The "free pass" has been withdrawn, Mr. Bush.

You did not act to prevent 9/11.

We do not know what you have done to prevent another 9/11.

You have failed usï¿½then leveraged that failure, to justify a purposeless war in Iraq which will have, all too soon, claimed more American lives than did 9/11.

You have failed us anew in Afghanistan.

And you have now tried to hide your failures, by blaming your predecessor.

And now you exploit your failure, to rationalize brazen torture which doesnï¿½t work anyway; which only condemns our soldiers to water-boarding; which only humiliates our country further in the world; and which no true American would ever condone, let alone advocate.

And there it is, Mr. Bush:

Are yours the actions of a true American?

2781. Shortwave Listener (SWL) Newbee Question - Is My Dipole Antenna Set-Up Right ?

Newsgroup: rec.radio.shortwave
Date: 2006-09-26 07:43:41 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1159256621.569750.4120@k70g2000cwa.googlegroups.com>
Source record: 93006

- If your antenna is fed with coax you don't need a balun.
- The 50 ohm coax is close enough to the 70-or-so ohms
- of a plain dipole.
-
- bob
- k5qwg

And . . . That 'plain' Dipole Antenna is by-design
best used for a single specific frequency.

Very Good for Amateur Radio single band operation.

Not-So-Good for a Shortwave Listener (SWL) who
intends on using the Dipole Antenna across the
entire Shortwave (HF) Band from 1.8 MHz to 30 MHz.

1 - Make the Dipole Antenna into a Windom Antenna
(Off-Center-Fed-Dipole) for better Multi-Band use from
a single Antenna.

2 - Use a 4:1 Matching Transformer {Balun} for improved
Broad-Band characteristics for Across-the-Band Shortwave
Radio Listening (SWL) at the expense of single frequency
performance.

The "Best" Antenna is not always the 'best' antenna.

theoretically speaking - it should not work,
but hey... What Works. WORKS ! - iane ~ RHF

The DE-11 is $35.99+$20 shipping on eBay (Liypin). It does not seem to be dual conversion, which is probably why it is less expensive than the DE-1105. All the dual conversion radios say dual conversion on Degen's website (do a web translation of their website). This radio does not. The same with Liypin's ads. Liypin never replied whether it was dual conversion or not.

The DE-11 doesn't have a tuning knob -- but does have an antenna jack. The DE-11 also shows the time at the same time as showing the frequency.

> be dual conversion, which is probably why it is less expensive than the
> DE-1105."

That may have a small part to play in the price difference. I suspect
there are other reasons though.

> All the dual conversion radios say dual conversion on Degen's
> website (do a web translation of their website). This radio does not.
> The same with Liypin's ads. Liypin never replied whether it was dual
> conversion or not.

Those are several very good indicators that the radio does not have
dual conversion. Which is not that big a deal on inexpensive radios
anyway. The DE1103 has images a-plenty and it is dual conversion.

> The DE-11 doesn't have a tuning knob -- but does have an antenna jack.

Missing tuning knob is a decided minus.

> The DE-11 also shows the time at the same time as showing the frequency.

That's nice.

It's an inexpensive radio. To be honest I would look at one of the
Redsun receivers.

Avoid the wireless KB and mouse..
My last set splattered "digital" pulse noise all over the place. Ugh!
I could clearly hear the mouse splatter in the 10/11M bands everytime I
moved the mouse.

www.devilfinder.com How did Nikola Tesla make his car run?

The part about,,,, in the Korean War,sometimes people would stand in front of Radar Towers to warm themselves up,basicaly microwaving themselves.
That,I definetly believe.In World War Two in England,a Radar was aimed too close to a wooden Aircraft Hanger.Them nails started popping and getting red hot.
So,what is so special about 70L7 Vacuum Tubes as mentioned Nikola Tesla used in his amazing Pierce Arrow car?

No damaged traces, but someone covered the exposed terminals with
black electrical tape over the HDE15 knockout. The 15 pins aren't too
hard, but removing the two spring loaded mounting clips is the bear. If
the onboard video is bad, I'll remove it and put one of the old DE-9
filler plates over the hole.

Only if you want a fire. The R-5000 uses a RECHARGEABLE battery. Replacing
it with a regular one will cause it leak and possibly explode.

> You might also check the Kenwood R5000 group on Yahoo.

Good advice. Look in the archives for this exact subject.

Geoff.

2820. Cable Ohm Question

Newsgroup: rec.radio.shortwave
Date: 2006-09-26 18:49:49 UTC
From: amyotte@personainternet.com
Message-ID: <1159296589.458391.311910@k70g2000cwa.googlegroups.com>
Source record: 93046

I am aware of the 50 and 75 ohm coax and the 300 ohm twin lead BUT I am not sure what this means.

I know about ohms as resistance in resistors but how does that pertain to cable.

Example - If I have 50 feet of 300 ohm twim lead ribbon cable and 50 ft of 75 ohm coax could I measure this ohm reading with a meter?

Just a question that has bugged me for a while.

Thanks
Brian

2821. Re: Metal Roof

Newsgroup: rec.radio.shortwave
Date: 2006-09-26 19:15:14 UTC
From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <efbuc6rro1@ctb-nnrp2.saix.net>
Source record: 93047

Metal roofed houses in South Africa are very common. They act like a Faraday cage and blot out all radio signals. But you can still get reasonable reception on a portable if you put it against a window in the direction of the signal you want to hear. Mostly though you have to put up a decent outside antenna higher than the metal roof (and away from it).

Also Sprach Dubya:

But the true threats to stability and peace are these nations that are not
very transparent, that hide behind the...that don't let people in to take a
look and see what they're up to. They're very kind of authoritarian regimes.
The true threat is whether or not one of these people decide, peak of anger,
try to hold us hostage, ourselves; the Israelis, for example, to whom we'll
defend, offer our defenses; the South Koreans.
-- Media roundtable, Washington, D.C., March 13, 2001 (Thanks to Peter Sagal)

Damn, you would think in 2006 that single-conversion radios were not
even being made! I have an old S-38 and an HE-10, both single
conversions, but they were made in the '40's and '50's! They still
pull in great DX on the BCB though and the tubes keep my room warm in
the winter!

>Example - If I have 50 feet of 300 ohm twim lead ribbon cable and 50 ft
>of 75 ohm coax could I measure this ohm reading with a meter?

50, 75, and 300 ohms refer to the characteristic impedances of the cables.
In simple terms, impedance can be thought of as AC resistance (an ohmmeter
measures DC resistance).

The length of the cable doesn't affect its characteristic impedance, but it
does affect signal loss. Fortunately, most cables have low loss at
shortwave frequencies.

NBC news showed an 18-page document tonight given to Ms. Rice by the
previous administration. It was a comprehensive strategy for fighting
al-Qaida.

The charging circuit is connected to the battery via a small connector.
Disconnect the charger and the regular lithium will be just fine and last as
long as it would in any of the other Kenwood rigs which don't use
rechargeables. I don't have mine anymore so I can't give you details of the
connector location, but if you can read a circuit diagram and board layout
it is easy to find.

>
> And . . . That 'plain' Dipole Antenna is by-design
> best used for a single specific frequency.

It's pretty much good for a band (1 to 2 MHz wide) cut at the center
frequency not just one channel.

Like most antennas for receiving it will work well at higher frequencies
above the resonant frequency with some exceptions such as 2 times the
fundamental.

> Very Good for Amateur Radio single band operation.
>
> Not-So-Good for a Shortwave Listener (SWL) who
> intends on using the Dipole Antenna across the
> entire Shortwave (HF) Band from 1.8 MHz to 30 MHz.

Well that depends. If you have one resonate at around 1.8 MHz it will
work well up to 30 MHz with a few noted exceptions. You can of course
make the antenna resonant at a frequency so that the even harmonics do
not fall on a broadcast band.

> 1 - Make the Dipole Antenna into a Windom Antenna
> (Off-Center-Fed-Dipole) for better Multi-Band use from
> a single Antenna.

This won't buy you much.

> 2 - Use a 4:1 Matching Transformer {Balun} for improved
> Broad-Band characteristics for Across-the-Band Shortwave
> Radio Listening (SWL) at the expense of single frequency
> performance.

Wrong, wrong, wrong, just plain wrong.

> The "Best" Antenna is not always the 'best' antenna.

Some advise is not always the best advice.

> theoretically speaking - it should not work,
> but hey... What Works. WORKS ! - iane ~ RHF

Theoretically speaking using the wrong BALUN for an application will not cause the antenna not to work, just not to work as well as it could.

One of many paid liars that makes up the new American Nazi Party AKA the republicans. How many times does she have to say something false or just outright stupid before even simpletons catch on? The Condiliar. I guess it is that you don't care whether it is BS or not.

Maybe what she really means is that Bush cleared brush, golfed, fished et cetera. That's something. I'm sure he was doing plenty to line his pockets with cash. That's something. So there you go.

< Snip >

That's because the age of the design has nothing to do with whether it
is 1, 2, or 3 conversion. There were double and triple conversion
receivers back then.

What determines the number of conversions is cost.

Coax and twin lead cables are transmission lines so 50 ohm coax, 75 ohm
coax, and 300 ohm twin lead refer to the complex impedance not
resistance. Look up transmission line theory.

You could use a network analyzer or TDR (time domain reflectometry) to
measure transmission line impedance. A DVM only measures resistance at
DC.

Thanks for the info guys. I signed up for the R5000 Yahoo group and
looked all through the posts, and while a number asked the same
question, there wasn't a definitive answer :-)

A couple of posts by me didn't make it through to the group (your
first 3 are vetted first), so it appears the group isn't currently
being moderated.

Anyway I did download the service manual from another site, and along
with the changeover procedure from the Yahoo group and this tip to
disconnect the charging circuit (which I recall I saw on the board
layout), it sounds like we're in business.

Thanks again ....

Interesting. You'd think they could compare audio recordings of Tokyo Rose with recordings of Iva Toguri D'Aquino, analyze the results and say with a fair amount of certainty whether the voices match or not. At any rate, I thought they could do this, but maybe it's not so straightforward.

Steve

Source record: 93073

"Islam isn't in America to be equal to any other faith, but to become dominant. The Koran should be the highest authority in America, and Islam the only accepted religion on earth."

Do you have any idea who said this?

It was Omar Ahmad,
http://www.discoverthenetwork.com/individualProfile.asp?indid=967

the chairman of the board of CAIR, the Council on American-Islamic Relations.
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6176

CAIR's spokesmen appear regularly in the media complaining about the treatment of Muslims and giving us the message that 'Muslims are part of the fabric of this great country and are working to build a better America.'

But when speaking to a Muslim audience, as Omar Ahmad was, the message is not so benign.

I'm certain you didn't know who made this statement. The media are too eager to portray Islam just as Muslims wish them to.

Read Robert Spencer's book "The Politically Incorrect Guide to Islam" and his other books. He has studied Islamic theology, law and history for decades. He has been a consultant to the U.S. State Department, U.S. Central Command, the Department of Homeland Security and the German Foreign Ministry on Islam and Jihad, and has appeared on the BBC, the VOA, CNN, and numerous other TV and radio outlets to discuss Jihad and terrorism.

Robert is not afraid to tell the truth - even though it has led to his being targeted with death threats by militant Muslims. In a recent Al-Qaeda videotape, he was actually mentioned by name as one of four people the terrorist groups regards as its most formidable enemies. And here's one of the more colorful threats he received:

"May Allah rip out his spine from his back and split his brains in two, and then put them both back, and then do it over and over again...Amen."

That's supposed to be a prayer! Have you noticed any Christian or Jewish prayers like that? And if you received that kind of threat - along with many others - would you continue to dig up and publicize the truth about Islam? Robert Spencer does, even though he has to conceal where he lives and some things about his identity to protect his family.

I know that many Americans do not want to face unpleasant facts. Too many refuse to admit that Islamic jihad is out to destroy America and is already influencing much that goes on in the media, the entertainment industry,

schools, libraries, and other institutions.

Imagine a liberal feminist submitting to wearing a head scarf, or giving up contact with unrelated men. Imagine the Koran as the ultimate authority over our daily lives. That's so hard to think about that it appears unreal. Yet that is the exact goal of the jihadists' Holy War.

>
>

Why shouldn't single conversion receivers still be made? They still work well enough for people to buy them.

The only real problem with single conversion is image rejection, and older higher quality single conversion radios obtained increased image rejection with additional tuned RF circuits. Hallicrafter's top of the line radio for 1947, the $275.00 SX-42, was single coversion (tuned antenna and two tuned RF stages) with an IF of 455 kc through 30 Mc. The second in line, the dual conversion (on six meters) SX-43 (tuned antenna and one tuned RF stage), cost $169.50. The S-38 (tuned antenna stage only) cost only $47.50. As a comparision in complexity, the SX-42 used a 10 wafer bandswitch, as long as the radio, to switch the oscillator and RF coils in and out. The S-38 used a stubby 2 wafer bandswitch.

Here's an article about the restoration of a SX-42, with a particular emphasis on the bandswitch:

http://antiqueradio.org/halli07.htm

For the same image rejection at high frequencies, a high IF converted to a lower IF will be cheaper than that lower IF with multiple tuned RF stages. However, conversion stages are noisier and potentially less linear than amplifier stages. I suspect Hallicrafters went with the more expensive single conversion scheme in order to sell an amateur radio with low noise, low distortion high fidelity ability all the way from the AM broadcast band, through SW, low VHF to the FM broadcast band. Hallicrafters soon replaced the 42 with more specialized amateur receivers, and reskinned it as the SX-62 (still expensive!) single conversion SWL radio. The SX-62 was around 'till 1965.

If anyone ever manages to design an inexpensive narrow bandwidth filter with an excellent shape factor at 45 Mhz or so, we can pretty much say goodby to the multiple conversion radio. Skip all those troublesome conversion stages! Exept there might still be a few radios with extra conversion stages. If so, there will surely be somebody saying "I can't believe

they're still using that old 20th century technology!!" Of course, the manufacturer might be doing it to distribute gain at different frequencies in order to avoid oscillation. But that's whole 'nother bit of radio design trivia.

Yes, but back then, multiple conversion was just downconversion. After the crystal controlled synthizers got cheap enough, the current popular up/downconversion scheme became practical. This way is particularly inexpensive, because the images can be attenuated with a low pass or bandpass filter.

>
> What determines the number of conversions is cost.

And it's cheaper to hit a particular image rejection target across a wide band with multiple conversion.

Source record: 93084

"I`ve been a member of the Intelligence Community (IC) for just under 30 years. I too noticed the fact that individuals from the IC put their personal political views before the oath they took when the were hired.

"From 1993 through 2001 [during the Impeached Klintoon dictatorship], there were issues I was aware of that might have been embarrassing had they come to light. I did not feel compelled to find a reporter (but then again (facetiously)where might I have gone?) and it no one else did.

"Were I D/CIA General Hayden, I`d take a page from the Left`s book and conduct a rather exhaustive purge.

"I think there are large segments of the CIA that cannot see the threats our country faces, primarily because of their left wing and I dare say, anti-American bias.

"These biases are carefully concealed in intelligence publications, but they show up in discussion databases. Perhaps the most telling way to gauge the bias is by what reports are not written i.e. which subjects are taboo to address.

"I`m not surprised that our fighting Islamist terrorists has made us more enemies. Seems to me that Islam`s 11 September 2001 attack on the United States brought a lot of fighters to our country`s side. If the pinnacle of the IC`s analysis is trumpeting discovery that our fighting Islamists creates more enemies, perhaps it`s time to find some better analysts.

"One thing does perturb me (and a friend who is in the process of deserting the Left) is that no one on the Conservative side (in politics)is articulating the extent of the threatterror (suicide and remote-controlled) bombings, continued "random" murders by "disturbed" Muslims, and culmination in a (series?) of WMD attacks in the United States and how we should deal with it. We should not be waiting for these attacks to come to have a dialogue on how we should respond.

"I am afraid that if we wish to prevail, we may have to return to the firebombing, area bombing attacks we employed against the Axis powers during WWII. I fear that only if we threaten the Islamic world with its very survival can we induce Muslims to control their Jihadist impulses. And if they cannot, we may have to at the very least consider some form of "Cordon Sanitaire" or a more dire solution that I hope remains unmentionable.

You couldn't read the resistance with a multimeter, at least not in any practical way. But, a DC meter would read the characteristic impedance of an infinitely long transmission line.

Imagine that!

If you're still curious, you'll find good explainations in the ARRL handbooks and the ARRL antenna books. There might be something at your local library.

Have you never seen a Bush press conference? Seriously. Bush terrifies his own staff. Is it good enough for you that most of his bizarre behavior is hidden? Somehow then it is ok, but when slimers like Wallace do the bidding of reptiles like Cheney, and Clinton does what any honest person does, he is a schmuck?

Its sad that the talk radio machine starts parroting these exact words and the trained drolling Lennys of the world simply think what they are told. Standing up to disgusting traitors like Roger Ailes and that awful Chris Wallace is something that is good.

Its not hard to figure out. Start by reading the phrase "new American Nazi Party." Now tell me how that doesn't match up with your comment about the old American Nazi Party? Is that a big enough clue?

Not surprised that you edited out the part about the habitual liar Condi Rice, Enron whore.

Bush did nothing. He is still worshiped by the republicans.

2919. What Impeached Klintoon Didn't Do . . .

Newsgroup: rec.radio.shortwave
Date: 2006-09-27 16:19:44 UTC
From: Der Fuehrer Mahmoud Ahmadinejad <dr-ahmadinejad@president.ir>
Message-ID: <efe8ab$he0$1@emma.aioe.org>
Source record: 93094

. . . .and when he didn't do it.

Impeached Klintoon's outburst on Fox News was something of a public service, launching a debate about the antiterror policies of his administration. This is important because every George W. Bush policy that arouses the ire of Democrats--the Patriot Act, extraordinary rendition, detention without trial, pre-emptive war--is a departure from his predecessor. Where policies overlap--air attacks on infrastructure, secret presidential orders to kill terrorists, intelligence sharing with allies, freezing bank accounts, using police to arrest terror suspects--there is little friction. The question, then, is whether America should return to Impeached Klintoon's policies or soldier on with Mr. Bush's.

It is vital that this debate be honest, but so far this has not been the case. Both Impeached Klintoon's outrage at Chris Wallace's questioning and the ABC docudrama "The Path to 9/11" are attempts to polarize the nation's memory. While this divisiveness may be good for Impeached Klintoon's reputation, it is ultimately unhealthy for the country. What we need, instead, is a cold-eyed look at what works against terrorists and what does not. The policies of the Impeached Klintoon and Bush administrations ought to be put to the same iron test.

With that in mind, let us examine Impeached Klintoon's war on terror. Some 38 days after he was sworn in, al Qaeda attacked the World Trade Center. He did not visit the twin towers that year, even though four days after the attack he was just across the Hudson River in New Jersey, talking about job training. He made no attempt to rally the public against terrorism. His only public speech on the bombing was a few paragraphs inserted into a radio address mostly devoted an economic stimulus package. Those stray paragraphs were limited to reassuring the public and thanking the rescuers, the kinds of things governors say after hurricanes. He did not even vow to bring the bombers to justice. Instead, he turned the first terrorist attack on American soil over to the FBI.

In his Fox interview, Impeached Klintoon said "no one knew that al Qaeda existed" in October 1993, during the tragic events in Somalia. But his national security adviser, Tony Lake, told me that he first learned of bin Laden "sometime in 1993," when he was thought of as a terror financier. U.S. Army Capt. James Francis Yacone, a black hawk squadron commander in Somalia, later testified that radio intercepts of enemy mortar crews firing at Americans were in Arabic, not Somali, suggesting the work of bin Laden's agents (who spoke Arabic), not warlord Farah Aideed's men (who did not). CIA and DIA reports also placed al Qaeda operatives in Somalia at the time.

By the end of Impeached Klintoon's first year, al Qaeda had apparently attacked twice. The attacks would continue for every one of the Impeached

Klintoon years.

. In 1994, Khalid Sheikh Mohammed (who would later plan the 9/11 attacks) launched "Operation Bojinka" to down 11 U.S. planes simultaneously over the Pacific. A sharp-eyed Filipina police officer foiled the plot. The sole American response: increased law-enforcement cooperation with the Philippines.

. In 1995, al Qaeda detonated a 220-pound car bomb outside the Office of Program Manager in Riyadh, Saudi Arabia, killing five Americans and wounding 60 more. The FBI was sent in.

. In 1996, al Qaeda bombed the barracks of American pilots patrolling the "no-fly zones" over Iraq, killing 19. Again, the FBI responded.

. In 1997, al Qaeda consolidated its position in Afghanistan and bin Laden repeatedly declared war on the U.S. In February, bin Laden told an Arab TV network: "If someone can kill an American soldier, it is better than wasting time on other matters." No response from the Impeached Klintoon administration.

. In 1998, al Qaeda simultaneously bombed U.S. embassies in Kenya and Tanzania, killing 224, including 12 U.S. diplomats. Impeached Klintoon ordered cruise-missile strikes on Afghanistan and Sudan in response. Here Impeached Klintoon's critics are wrong: The president was right to retaliate when America was attacked, irrespective of the Monica Lewinsky case.

Still, "Operation Infinite Reach" was weakened by Klintoonian compromise. The State Department feared that Pakistan might spot the American missiles in its air space and misinterpret it as an Indian attack. So Impeached Klintoon told Gen. Joe Ralston, vice chairman of Joint Chiefs of Staff, to notify Pakistan's army minutes before the Tomahawks passed over Pakistan. Given Pakistan's links to jihadis at the time, it is not surprising that bin Laden was tipped off, fleeing some 45 minutes before the missiles arrived.

. In 1999, the Klintoon administration disrupted al Qaeda's Millennium plots, a series of bombings stretching from Amman to Los Angeles. This shining success was mostly the work of Richard Clarke, a NSC senior director who forced agencies to work together. But the Millennium approach was shortlived. Over Mr. Clarke's objections, policy reverted to the status quo.

. In January 2000, al Qaeda tried and failed to attack the U.S.S. The Sullivans off Yemen. (Their boat sank before they could reach their target.) But in October 2000, an al Qaeda bomb ripped a hole in the hull of the U.S.S. Cole, killing 17 sailors and wounding another 39.

When Mr. Clarke presented a plan to launch a massive cruise missile strike on al Qaeda and Taliban facilities in Afghanistan, the Klintoon cabinet voted against it. After the meeting, a State Department counterterrorism official, Michael Sheehan, sought out Mr. Clarke. Both told me that they were stunned. Mr. Sheehan asked Mr. Clarke: "What's it going to take to get them to hit al Qaeda in Afghanistan? Does al Qaeda have to attack the Pentagon?"

There is much more to Impeached Klintoon's record--how Predator drones, which spotted bin Laden three times in 1999 and 2000, were grounded by bureaucratic infighting; how a petty dispute with an Arizona senator stopped the CIA from hiring more Arabic translators. While it is easy to look back in hindsight and blame Impeached Klintoon, the full scale and nature of the terrorist threat was not widely appreciated until 9/11. Still: Impeached Klintoon did not fully grasp that he was at war. Nor did he intuit that war requires overcoming bureaucratic objections and a democracy's natural reluctance to use force. That is a hard lesson. But it is better to learn it from studying the Klintoon years than reliving them.

Mr. Miniter, a fellow at the Hudson Institute, is author of "Disinformation: 22 Media Myths that Undermine the War on Terror" (Regnery, 2005).

I saw an incredible show on UK television last night. Incredible because it took the left to task for supporting terrorism.

The show was "Don't get me started" on channel five at 7:15 pm. In it, David Aarononvitch exposed how the left is supporting Muslim terrorists around the world and undermining the war on terror. They named names too - Galloway and Pilger were denounced.

The show also exposed the false idea that Afgahanistan or Iraq are behind Muslim terrorism and noted the first attack on the WTC and 9/11 both preceded those wars. Likewise the myth that poverty breeds terrorism by pointing out the Muslim 7/7 terrorist came from well to do families.

The show detailed some of Hezbollah's terrorist activities and pointed out they started the latest Lebanon war, used human shields and acted as terrorists. While on the other hand Israel did its best to hit only military targets. But the left joined with the terrorists, marching to the tune of "we are all Hezbollah now".

I sat there gobsmacked. I never thought I'd see the bare truth laid out so well and the left exposed as the Muslim terror supporters they have become.

You will never see such a show on the BBC.

Scheuer, who wrote the book "Imperial Hubris," said he met every 10 days with top members of Clinton's anti-terror team and plans for an invasion were never presented or discussed.

Fran Townsend, a former top intelligence adviser in Clinton's Justice Department and now Bush's anti-terror czar, rolled her eyes when asked about Clinton's invasion plan.

"There were lots of things that seemed new" in Clinton's recollections on Fox, Townsend said.

Two sources that Clinton repeatedly cited in the Fox interview - the 9/11 commission report and Richard Clarke's book, "Against All Enemies: Inside America's War on Terror" - never mention plans to invade Afghanistan

Here's a BBC interview in 2004 by David Dimbleby with Bill Clinton. It's not just Fox News's Chris Wallace that Clinton bristles at being asked inconvenient questions.

Watch the video
http://news.bbc.co.uk/1/hi/programmes/panorama/3885521.stm

but here are some interesting things I heard.

9:40 Clinton says he wasn't thinking straight because of Ken Starr so he had an affair with Lewinsky. How does that square with his claim that he wasn't distracted away from al Qaeda by Starr's investigation?

10:58 and at other times Clinton talks about living parallel lives.

11:10 Clinton talks about his titanic fight with my demons. Again, how does that square with his claims that he wasn't distracted?

16:47 Clinton starts to attack Dimbleby like he did Wallace, wagging his finger and saying people like you.

And again at 17:55 people like you..finger wagging...you always help the far right....you like to hurt people...

26:40 Clinton makes an astonishing claim that when he bombed Iraq four times, he was not sure if he got all of saddam's wmd.

Compare this video to the Wallace video.

2934. Just about everything Klinton said in the interview with Wallace was a lie

From AllAccess.com

'FCC Will Split L.A. Ownership Hearing Between Two Locations

'The FCC has issued an agenda for its LOS ANGELES media-ownership public hearing, and the panel will be split between two locations. The afternoon session -- 1-4:30p (PT) -- will take place at USC's DAVIDSON CONFERENCE CENTER, and, after a dinner break, the evening session (6:30-10p) will be held at EL SEGUNDO HIGH SCHOOL near LAX.

'The afternoon session will feature a panel with the creative community on independent programming, and the evening session will have a panel on an overview of the LOS ANGELES market. No panelists have been yet named for the panels.'

Interesting FCC strategy, here, in light of recent revelations about previous ownership studies.

And this, I found most telling, especially given the warm feelings expressed here on the topic. This is far from an indictment of HD Radio. But does point to a possible, if not probable, perceptual obstacle that could impact the implementation strategy.

Considering that broadcasters have also been trying to implement digital strategies on shortwave, this study may provide at least a soupcon of illumination into that mess

Also from AllAccess.com

'Study: Listeners Confused About HD Radio

'Stations contribute to confusion when they say they are 'broadcasting in HD' without offering an explanation of what is required to receive it A new research study from MARK KASSOF & CO. reveals that 5% of 18-64s think they're receiving HD RADIO from at least one of the FM stations they listen to -- but they haven't actually purchased an HD-capable radio. Among these listeners, 46% say HD is "about the same" as regular FM radio, while 12% of them characterize HD as "a lot better" than regular FM.

'"Stations contribute to confusion when they say they are 'broadcasting in HD' without offering an explanation of what HD provides and what is required to receive it," company President MARK KASSOF. "As a result, some listeners wrongly think they are receiving HD."

'Just 1% of listeners say they've purchased an HD-capable radio, and two-thirds of those say HD is "a lot better" than regular FM. The findings are based on 752 telephone interviews completed from September

Gaping Holes in America's Security
http://www.newsmax.com/archives/articles/2006/9/25/204533.shtml?s=lh

A federal judge blew up the latest attempt to find out just how deep Communist Chinese espionage reached into the American political system by dismissing the Feds' case against Katrina Leung. Judge Florence-Marie Cooper, appointed to the bench by Impeached Klintoon in 1999 after an appointment to a state-level court by California Republican Governor Pete Wilson, insisted the prosecution's deal with Leung's FBI handler - and lover - James J. Smith had barred him from talking to defense attorneys, and as such hindered Leung's defense.

http://china-e-lobby.blogspot.com/2005/09/news-of-day-september-12-2005.html

No wonder Impeached Klintoon turned over everything to the FBI.

> about the old American Nazi Party? Is that a big enough clue?

No. I require logic in clues before attempting to dissect them. If you
want to back off your attempt at yet another tedious Nazi-Republican
analogy, that's fine, but no clue is necessary for that. Otherwise, you
need to educate yourself (a lot) about 1) Nazis and 2) Republicans.
>

But you are a big part of the clutter.

Five or six posts sometimes to the same thread, right after the other.

You can't even quote properly, so not only does your near random postings
often have no relevance, but we don't even have a clue what prompted
the post.

Ultimately, you are no different from the political posters, because
both you and they are treating this newsgroup as a "hangout", where you
post because you are already here. There are lots of newsgroups for
discussing political things, there are even newsgroups for people who
are lonely and haven't got a life, and that's where you are supposed
to go rather than drag the newsgroup down with your off topic posts.

London
September 28, 2006

Iva Toguri
July 4, 1916 - September 26, 2006

American citizen who was falsely accused of being the notorious Japanese propagandist 'Tokyo Rose'

She was, they said, the Lord Haw-Haw of the Pacific. Born in Los Angeles of Japanese parents, she renounced America and spent the war years taunting American servicemen on the radio, assuring them that their cause was lost and that their country's defeat was inevitable.

She became the most notorious traitor produced by America during the Second World War. In the eyes of the world she was the despicable "Tokyo Rose".

When she was finally tracked down in occupied Japan and brought home to the US to stand trial, the furore was immense. The tabloids and the airwaves were filled with hatred for a young woman who had commited the worst of crimes - that of being publicly and flagrantly anti-American in time of war.

The trial, in which the FBI and the American military, as well as the fourth estate, invested considerable time and energy, ended up with a price tag of nearly three quarters of a million dollars - a huge sum and a record for the period. When the accused was fined $10,000 and sentenced to ten years in prison, it was widely felt that too much leniency had been shown.

"Tokyo Rose", described at her trial as being the nom de guerre of the 30-year-old Iva Toguri, promptly disappeared into the US prison system and, in due course, was forgotten.

That was the legend. The truth, when it emerged, was very different. Indeed, it was so different that if a new trial were to be held today, those in the dock would mostly be journalists, agents and officials of the US Government.

For it was a combination of these three that whipped up the story of Tokyo Rose and then pinned the blame on Iva Toguri. Her story and the one concocted by them were separated by more than culture and language and the need, in the immediate postwar period, for traitors to be seen to pay for their crimes. They were separated by politics and cynicism and, most of all, by the intense desire of an unprincipled group of American reporters to secure the scoop of a lifetime.

The real story of Ikuko (Iva) Toguri did not emerge for many years. Her father, Jun Toguri, had arrived in the US from Japan in 1899. Her mother, Fumi, did not make the trip until 1913. The two were married and Iva was born (with some irony in the light of what was to transpire), on the Fourth of July, 1916.

The Toguris - one among thousands of JapaneseAmerican families in Southern California - were Methodists, and Iva was raised as a Christian. She attended schools in Calexico and San Diego, and then in Los Angeles, before enrolling as a zoology student at UCLA, from which she graduated in 1940.

She was well liked and had many friends. No one at the time saw her as anything but a loyal American. Among her favourite radio shows were The Shadow and Little Orphan Annie. She also enjoyed sport.

All the while, war was brewing between the US and Imperial Japan. One morning in the early summer of 1941 Iva's mother received news that her sister had fallen seriously ill in Tokyo. As her mother suffered from diabetes and could not easily travel, it fell to Iva, then 25, to make the long journey to Japan to be at her aunt's bedside.

Iva Toguri did not possess a passport and there was no time to get one. Instead, she secured from the State Department an identity certificate, which, she was assured, would guarantee her readmission into the country of her birth. Certainly, her intention as she set out aboard the steamship Arabia Maru on July 5, 1941, was to pay her respects, and those of her mother, to her ailing relative and then, after a suitable time, to return to Los Angeles to pursue a career in medicine.
But while she was paying her visit, on December 7, 1941, aircraft of the Imperial Japanese Navy attacked the US base at Pearl Harbor, destroying many ships and initiating three years and nine months of conflict.

Iva Toguri found that, like hundreds of other Japanese-Americans, she was stranded in what had suddenly become enemy territory. There was no means for her to make her way back to Los Angeles and she was forced to remain in Tokyo and somehow make a life for herself. She did not speak Japanese and she was a Christian in a Shinto society. More than that, she believed firmly in the American way of life and had no sympathy with either emperor worship or Japanese expansionism.

From the point of view of the Japanese authorities, individuals such as Toguri were of some slight practical importance. They knew the enemy and they knew the enemy's language. Thus it was that Iva, while refusing to renounce her US citizenship, was encouraged to study Japanese and to adapt to the culture of her ancestors. In 1942 she was recruited as a typist by the Domei News Agency, and then, a year later, by Radio Tokyo, the propaganda arm of the Japanese state broadcasting system.

Ironically, she was not taken on directly by the Japanese station bosses, but by an Australian prisoner of war, Major Charles Cousens, who had been forced by his captors to develop an English-language news and music service. Cousens, like Toguri, was no creature of the Japanese and sought to convey in his daily schedule a mixture of information and entertainment that would

cause as little offence as possible to Allied soldiers while still not bringing down on his head the wrath of his superiors.

There were at the time a number of English-speaking Japanese women broadcasters who specialised in playing up Japanese military victories and pouring scorn on their enemies, especially the Americans. They were chosen for their sexy-sounding voices and their presumed ability to undermine the morale of their target audience. GIs took to calling these women by the generic name, Tokyo Rose.

But Iva Toguri was not one of these. Her broadcasts, scripted by Cousens, and put out under the name "Orphan Ann"were bland and almost factual. She used the money she earned to help to feed and clothe Allied prisoners, and she even managed to insert into her broadcasts subtle indicators that the war was not in fact going Japan's way. In April 1945 she married a Portuguese citizen of Portuguese-Japanese ancestry, Felipe d'Aquino.

At the Japanese surrender tabloid reporters combed the country in the search for "Tokyo Rose" and eventually, through bribes, secured the name of Iva Toguri. The press, backed by various radio stations, now "revealed" that Toguri was the infamous Tokyo Rose. At first, the accusations did not seem to warrant prosecution and she was released after questioning. But a growing public furore led to her re-arrest and she was brought back to the US for trial.

The FBI, under pressure from Washington, was only too glad to back the allegations, even to the extent of paying Japanese "witnesses" to perjure themselves in court. The trial was a sensation. The evidence was either scant or false. Witnesses said whatever they thought was expected of them. In the end, the only surprise was that the prisoner was not jailed for life, or even executed.

After serving six years of her ten-year sentence, Tiguri, a model prisoner, was freed. She joined her father, who had settled in Chicago, and continued to work in the family import business there until well into her eighties.

In 1976, after a second media campaign led by Bill Kurtis, of CBS, the news anchor Morley Safer produced an item about Iva Toguri on the mass-audience 60 Minutes show. This revealed not only the true nature of Toguri's enforced wartime occupation, but the extent of the perjury and tabloid feeding frenzy that had led to her arrest and conviction.

Toguri was pardoned by President Ford as his last act on leaving office in January 1977. She went to her grave without uttering a word of criticism against those who had persecuted her. The fine she paid was never returned.

Toguri's husband was never allowed to join her in the US, and they reluctantly divorced in 1980. He died in 1996.

Iva Toguri, the wartime "Tokyo Rose" of legend, was born on July 4, 1916. She died on September 26, 2006, aged 90.

I was listening to Omega One this morning at around 1340Z. Todd was doing some sort of monologue and looses it. Cussing, swearing, obscenities, calling the Bureau NAZI's. If Omega One was a REAL radio station, Todd would have lost his license for indecency. ROFL

How nice for an "insider" such as yourself, who apparently knows all about
Bush's "hidden" behavior, to give us the benefit of his wisdom. Oh wait, I
bet your mentors at MoveOn.org (you know, the loony equivalent of "the talk
radio machine") filled you in from *their* insider expertise. Oh, and
congrats for getting "Clinton" and "honest person" in the same sentence.
There really is a first time for everything.

Not to leave you out this, but most intelligent Americans (me, for example)
saw Clinton's petulant child routine for what it was--even without the
benefit of that all important "talk radio machine" (cue dramatic music!).
BTW, did you mean "drooling." The last time I saw anybody "drool" was at a
Howard Dean rally.

>What determines the number of conversions is cost.
You can make a fairly respectable single conversion receiver, but
there are a couple things you need to do to get reasonable image
rejection, and selectivity. Raise the IF frequency to several Mhz, and
put a tuned rf amp in front of the mixer. That usually required a
crystal filter for good shape characteristics and good selectivity.

Triple conversion is more about being able to put the final IF down
low enough that you can get very sharp skirts, and narrow passbands
without an especially high Q filter. I.E. a bandwidth filter with a Q
of 100 gives you a 10Khz passband at a 1Mhz IF, but at 50Khz, it is
only 500Hz wide, very suitable for CW, and an L/C filter costs a lot
less than a real multipole crystal filter.

Terrorism is so far non existant in the US. As far as your second
comment besides being idiocy deserves no comment what so ever.
People like you libs dont even know waht real torture is. let me
give you a hint what real torture is: going after somebody with a
blow torch and a pair of vise grips and maybe a 2lb hammer.

> But the sheer idiocy of thinking that you can engage in a "war" against
> a technique of combat is lunacy.

Yea lets pull out of the middle east and just sit on our hands and see
what happens,, kind of like what Clinton did and look at the mess
it created.

Well lets see the dow is at an almost all time high.
Unemployment is 4.7% which is virtual full employment.
Interest rates are low, so people are buying big ticket items
which is what fuels our economy.
Gas prices are way down. Yep its horrible out there

Yawn
>
> I could go on but why bother... Bush is a blatant traitor.

The chinese getting our W 51 missile targeting tech. is no fable.
At least one chinaman went to prison over it, when 25 yrs. ago he would
have been hung. Just how did someone with a relationship with a hostile
to the US country, ever get a security clearance of top secret or higher
to work in the facility????? I got my top secret clearance in 1970 and
back then you got a real anal exam. Back then NO one would have
gotten even a secret clearance if they had any ties to a hostile foreign
country. How did that get pushed thru????? Or were the right people
told from high up to look the other way.???

People like you rabid libs have such a hatred of Bush you cant see grass
from the trees. All this over a lousy president who was Impeached for
lying to Congress, was fined 100,000 for perjury in federal court.
Lost his license to practice law. Faced numerous charges of rape.
Sits in the oval office getting his knob polished by an intern while foreign
dignitaries were waiting for him. Didn't do anything in 93' when the WTC
was bombed the first time. Didn't do anything when an embassy was bombed
in 98. Didn't do anything when the USS Cole was almost sunk. All by Al
Queda. And you defend this crud????? Dot tell me let me guess,, you're
some little college puke that listened to his lib professors for 4 yrs.
You really arent worth any more of my time (killfiled)

I have seen Bush in several press conferences and not once have
I ever seen him get in someones face with his eyes bulging out pointing
his finger in a threatening manner. Bush terrifies his own staff huh...
and we know this how??? cites?? Clinton was 10 seconds away from
tossing his cookies he was so worked up. I guess you cant read body
language. He acted exactly like some little kid throwing a tantrum.
Jesus,, what a moron. Go back to your MM or Al Franken guide
book.

I'll throw out an answer: NO wmb's in Iraq. No connection to 9-11. No terrorists there, till we got there to make some. Torture is up. Terrorist recruiting all over the world is up. The Anbar Province is lost. Iran's worst enemy, Saddham, is outta power. Not much electricity or clean water. Oil production is shot. And pretty soon, the American soldiers lost in Iraq will exceed our 9-11 casualties.

My only other regret is I didn't buy Halliburton at $5 a share back in 2002, when they were meeting in secret with Bubba Cheney :-(

There were roughly a dozen females doing broadcasting for Japan's
propaganda radio services. D'Aquino was the only American, however. When
the FBI couldn't get any evidence of treason against her, they coached
two liars for a few weeks to gain a conviction. Even POWs who met her in
Japan had nothing incriminating to say about her, hence the false
witnesses by the US Government.

From: bazar radio <bazar@nomail.net>
Message-ID: <bazar-0C67A4.05155428092006@news.motzarella.org>
Source record: 93370

Just to compare:

- put your analogue radio on a DRM freq and observe the signal

- put your drm radio on a feq and look how good reception is

EG: for the 2010D/2001D sony: if the sig is about 3-4 leds, you would be able to hear an analogue station but the question is if the DRM signal can be decoded ???

Do you need a 6-7 led signal before DRM decoding is possible??
(experiment should be done when there is no interference from adjacent stations..)
in europe eg on ?? 6090-drm etc ... ??)

So, will it be feasable to listen to weak stations in DRM ????

bye,
PS I build my own AM loops 150khz-30Mhz (even lower)

Christianity is a religion for OTHERS to follow. The basic precepts
taught by Jesus seem to elude every self proclaimed Christian politician
in the US congress today. Death, deceit and dishonour are so embedded in
their souls they may never be able to recover and the rest of the world
will suffer for it.

The last Pope is said to have had suspicions that Bush is the
Anti-Christ. I see no reason to doubt his wisdom in this matter.

I mistakenly thought the double set of quotation marks would take care
of the assignation. I should have been more judicious in my clipping.

As for the fittings costing money, well....I was going to purchase only
a few every weekend until the goal was met. How hard can it be? Only two
couplings per roll of cable..shucks, I'll be done in no time.

I read a quiz concerning infinity years ago. It may have been by Martin
Gardner. The problem being that you own a hotel with an infinite number
of rooms. They are ALL occupied. A stranger appears at the registry desk
desperately needing a place to stay, You actually get them one of your
hotel rooms, empty.

How do you do it?

Please enlighten us further. I, for one, would be most grateful if you
would provide a list of "every self proclaimed Christian politician in the
US congress today" and how each one of them (individually please) has
"death, deceit and dishonour" in their souls. I'm aware that this may take
at least a little of your no doubt valuable time, but think of it as a
tutorial for those who may view your comments as made up chiefly of
unsupportable, overwrought generalizations primarily characterized by deceit
and dishonour. TIA.

As Dale mentioned the FCC has authorised some ham tests on the 600M band.
I heard part of what might be the NEED call he heard, but a lot of local QRM and
the QRN from lightning made listening roguh.
Terrry

>From <http://groups.yahoo.com/group/lowfrequency/message/189>
"LF fans have something new to listen for in the 505-510 kHz frequency band. A group radio amateurs at 21 locations have been granted an experimental licence to operate here by the FCC.

For the last several nights I have been hearing at 506kHz, a CW beacon with call sign WD2XSH/20 originating with N6LF at Cottage Grove Oregon around 8 pm PST and later.

>From the ARRL Web Site:

NEWINGTON, CT, Sep 15, 2006 -- (As of September 13, 2006) The FCC's Office of Engineering and Technology has granted a Part 5 experimental license to the ARRL on behalf of a group of radio amateurs interested in investigating spectrum in the vicinity of 500 kHz. Experimental license WD2XSH was issued September 13. The two-year authorization permits experimentation and research between 505 and 510 kHz (600 meters) using narrowband modes at power levels of up to 20 W effective radiated power (ERP). ARRL Member Fritz Raab, W1FR, of Vermont, will serve as experimental project manager for "The 500 KC Experimental Group for Amateur Radio."

More information can be found at the ARRL website. A list of participants and a map showing their location can also be found at www.500kc.com.

Hi Terry,
This is breathing new life into LF. I have heard audibly (and on ARGO, of course) 2 stations so far. And then the NEED beacon last night- very odd as it was running in standard NDB mode- i.e. 1000Hz keyed AM CW tone on a carrier centered at 505 KHz.
W4DEX also copied it (east of me in Charlotte) and an OH station. I can't hear it in the daytime so I cannot DF it with the 7' loop.
Appreciate reports from anyone who can copy NEED during the daytime hours.

73,
Dale W4OP

Hello Dale,

In Yahoo Groups NDBLIST, there is a pretty good thread about W2DXSH/20 (strange call) transmitting test signal on 506kHz. I did not see anything about NEED. The tests are coming from near Oregon. This beacon group would know, and would like to know, about any transmissions in this frequency area.

Hi Al,
I am active on the 600M reflector- so far no one knows where this is coming
from. Definitely not part of the experimental group.
All of the experimental group have the same call followed by a / and 2
digits.

Please *don't* enlighten us further.

Look, gawd knows that we have our problems here in the U.S., not least
of them caused by the current Administration, its flouting of laws
from minor to the Constitution, and, most depressing of all, the
lemming-like followers who would have never accepted this from any

Administration run by a Democrat.

What we *don't* need is some guy who pathologically criticises us from the comfort of his own country. If he's that insecure that the only thing that makes him feel good is pointing out the flaws of another country, he needs professional help. Cost shouldn't be an issue, eh.

Russian LUKOIL or American UNOCAL?
Communist Chinese CNOC or American UNOCAL
Argentinean BRIDAS or American UNOCAL?

You choose Dr.DaviD -

HONG KONG, SEPT 14: Last year Cnooc, China's biggest offshore oil producer, lost a bid to buy Unocal to Chevron, the second-largest US oil company.

The $17.8 billion cash and stock acquisition boosted Chevron's Asian gas reserves by 50% and threw US-China rivalry over energy assets into focus. ''For a major oil company like Chevron, it will be a surprise if they are not talking or trying to collaborate with the Chinese companies on oil,''

Chevron Corp's relations with Chinese oil companies are returning to normal as the fallout from its victory a year ago over Cnooc Ltd in the bidding battle for Unocal Corp fades, said analyst Victor Shum. ''At the end of the day, it is business as usual,'' Shum, senior principal at Purvin & Gertz Inc, said by telephone from Singapore on Thursday. ''If Chevron has something good to offer to China, why wouldn't the Chinese companies be interested?''

Klintoon, Unocal & Taliban
...
With its ambitious venture to break the chaotic impasse in Afghanistan and the promise of reaching the resource wealth of Central Asia beyond, Pakistan was soon able to get ENDORSEMENT FROM THE IMPEACHED KLINTOON ADMINISTRATION, Saudi Arabia and United Kingdom TO AID, MOBILIZE AND EXPAND THE TALIBAN.
...

The first motive to be discussed is the financial one. Billions of dollars laid at stake for foreign nations and companies. Pakistan, America, and other western nations wanted to exploit the natural resources of Central Asia. A proposed gas pipeline from Turkmenistan and Khazakistan via Afghanistan, towards South Asia (Indian Ocean) was envisioned. This project was heavily endorsed by Pakistan, Unicol[Unocal], Delta (a Saudi oil company), and a number of other small investors. An investment of 3 billion dollars had been accumulated for the development of the pipeline. Thus an extremely strong financial motive existed to support a puppet government in Afghanistan. Furthermore, the Rabbani (Masood) government had made a fundamental flaw while in power. They also dealt with the pipeline option, only to reject the proposal of Unicol, which many suspects was heavily endorsed by Pakistan and opted for the Argentinean oil company Bridas. Bridas was most likely the more lucrative choice for the Rabbani government but far less lucrative politically. Thus their existed a strong financial reason to support and aid a new group.

If you're talking actual IR, then of course they are infrared. And if you mean remote controls, then I think it's safe to say that they all use IR at this point. (There was a time when tv remotes used ultrasonic sound, and recently I read of an old tv remote that did use radio.)

It's worth pointing out that most bits of equipment using IR for a wire free connection tend to modulate the IR emitter with a "carrier" that's above audio frequencies, such as in the 40KHz range. Those tend to include harmonics, so if you hold an IR remote next to an antenna, you are likely to hear something; of course it depends on the unit and how many times the actual frequency you are listening to.

But, at least some of those wireless keyboards and mice use 27MHz. They say so right in the flyer. Presumably they use radio rather than IR so there's no issue with line of sight, and 27MHz has been allocated for low power use for decades (and may be a lot safer for the use now with a lot of the traffic presumably out of there). It's still low enough in frequency to be cheap to work with.

I imagine other wireless keyboards and mice might use higher frequencies, using some other allocation for low power license free use.

Michael

People have already mentioned the class A and class B ratings, which I
think you are referring to. I have no idea if it's still in place, or
people are working from memory.

My memory says the stuff rated for business was less stringent, and if
that's a proper memory, I always thought it was because at home one is
surrounded by consumer devices like radios and tv sets, and the likelihood
of interference to those devices is high, hence higher standards.

I don't see any contridiction between the sites and what I said. Even if the ohmmeter is a DC instrument, the hypothetical infinately long transmission line would see only DC pulses. The pulses might last a few seconds or untill the battery dies or untill the operator meets his eternal reward or until the whole universe shuts down. I don't see how it matters. None of these pulses would get into the troublesome "low frequency" area of the transmission line analysis.

Hey, I could be wrong. But, if so, how am I wrong? What do you think would happen if you hooked up a DC ohmmeter to an infinately long transmission line?

But if the IF is in the middle of the range of a wide coverage receiver, the low bands will track backwards with respect to the oscillator frequency. This can be dealt with by manually tuning the RF amp seperately or by beating the tuning oscillator against a seperate oscillator and taking the difference, which will track in the right direction.

Making single conversion radios with good image rejection is certainly possible, but it isn't simple.

"The Intelligence Community has strong indications that Bin Laden intends to conduct or sponsor attacks inside the United States." - Classified document signed by IMPEACHED Klintoon in December 1998

This conclusion was based on numerous threads of evidence. Beginning in 1998 the U.S. intelligence community received regular reporting concerning not only al Qaeda's determination to carry out attacks in the United States but that the terror group also planned to hijack civilian aircraft. Some of the reporting even specifically referenced the World Trade Center.

On page 124, for example, the Joint Inquiry lists six instances--all prior to 2001--in which the intelligence indicated al Qaeda was planning attacks on U.S. soil:

In June 1998, the Intelligence Community obtained information from several sources that Osama Bin Laden was considering attacks in the United States, including against Washington, D. C. and New York;

In August 1998, the Intelligence Community obtained information that a group of unidentified Arabs planned to crash an explosive-laden plane from a foreign country into the World Trade Center;

In September 1998, the Intelligence Community obtained information that Osama Bin Laden's next operation could possibly involve flying an aircraft loaded with explosives into a U.S. airport;

In October 1998, the Intelligence Community obtained information that al-Qaeda was trying to establish an operative cell within the United States, and that there might be an effort underway to recruit U.S. citizen-Islamists and U.S.-based expatriates from the Middle East and North Africa;

In September 1999, the Intelligence Community obtained information that Osama Bin Laden and others were planning a terrorist act in the United States, possibly against specific landmarks in California and New York City; and

In late 1999, the Intelligence Community obtained information regarding the Bin Laden network's possible plans to attack targets in Washington, D. C. and New York City during the New Year's Millennium celebrations.

The report [signed by IMPEACHED Klintoon] goes on to note that the "group of unidentified Arabs" mentioned in the information obtained in August 1998 were later "linked to al-Qaeda." The Federal Aviation Administration, however, "found the plot to be highly unlikely given the state of the foreign country's aviation program" and "that a flight originating outside the United States would be detected before it reached its target." The FBI's New York office, therefore, "took no action on the information." [The FBI

office again - ref: China-Gate]

On page 210, the Joint Inquiry reports this warning sign:

In January 1996, the Intelligence Community obtained information concerning a planned suicide attack by persons associated with Shaykh al-Rahman [note: aka the "Blind Shaykh"] and a key al-Qaeda operative to fly to the United States from Afghanistan and attack the White House.

On page 211, of the Joint Inquiry report, we learn the following:

In April 2000, the Intelligence Community obtained information regarding an alleged Bin Laden plot to hijack a Boeing 747. The source, a "walk-in" to the FBI's Newark office, claimed that he had learned hijacking techniques and received arms training in a Pakistani camp. He also claimed that he was to meet five or six persons in the United States. Some of these persons would be pilots who had been instructed to take over a plane, fly to Afghanistan, or, if they could not make it there, blow the plane up. Although the source passed a polygraph, the Bureau was unable to verify any aspect of his story or identify his contacts in the United States.

The report notes that the intelligence disseminated from 1998 on "encompassed, for example, indications of plots for attacks within the United States," including "attacks on civil aviation; assassinations of U.S. public officials; use of high explosives; attacks on Washington, D.C., New York City, and cities on the West Coast; crashing aircraft into buildings as weapons; and using weapons of mass destruction."

> Frank Dresser

In this discussion you can't arbitrarily separate AC and DC components. The DC pulses you speak of are a summation of a DC term plus AC components based up on the repetition and duration of the pulses. Assuming that these are slow pulses from connecting and disconnection the meter, there would be significant low frequency content.

Hooking up a DC voltmeter to an infinitely long line is something that requires you to look at the transient response of the system as opposed to what would normally be viewed in a steady state manner.

Since the papers I referenced show the low frequency behavior looking capacitive, I would expect the ohmmeter readings to look similar to one trying to measure a capacitor.

Source record: 93230

Dressler NIB (still sealed in shipping box) $450 shipped ARA100HDX

covers 40 kHz to 100 MHz and is designed for the interception of weak signals even in the presence of strong broadcast station signals. The ARA 100HDX is a alternative for those who do not have the space for a traditional outside wire antenna. It is compact and unobtrusive. The output impedance of the antenna is always 50-75 ohms, independent of frequency. This allows efficient connection directly to the receiver without an additional antenna tuner. The ARA100HDX will not overdrive most portables.

Universal sells for $550

3056. Hey everybody, I heard on Omega One this morning, Todd says we're all scumbags.

Source record: 93237

This msg was supposed to be part of this thread... but the google bug
bit:

The DE-11 is $35.99+$20 shipping on eBay (Liypin). It does not seem to
be dual conversion, which is probably why it is less expensive than the

DE-1105. All the dual conversion radios say dual conversion on Degen's
website (do a web translation of their website). This radio does not.
The same with Liypin's ads. Liypin never replied whether it was dual
conversion or not.

The DE-11 doesn't have a tuning knob -- but does have an antenna jack.
The DE-11 also shows the time at the same time as showing the
frequency.

Tonight (2006 09 28) at about 23:30Z I am picking up a very weak signal on 503.6KHz. I am rearranging my radio room and antennas, so I am using my field radio and antenna. A DX398 and a random wire, about 40' long, at a 6' elevation.

There is too much QRN to tell if there is any modulation on the carrier.

I am located between Lexington KY and the KY river.

Terry

3063. Wellbrook question

Newsgroup: rec.radio.shortwave
Date: 2006-09-29 00:05:07 UTC
From: r2000swler@hotmail.com
Message-ID: <1159488307.655877.208510@i42g2000cwa.googlegroups.com>
Source record: 93239

Has anyone had a "bad", as in less then stellar performance, with a
Wellbrook ALA 1530
loop antenna?

Given the almost sacred refference the Wellbrook is held in I have
debated asking
this question. I have a ALA 1530 that is part of a trade that I am
looking at and
guys I just don't get it. This antenna is reputed to be the cat's meow,
but I have
found it marginal at best. A north country active antenna is nearly
it's match
and the 3rd harmonic of a local MW (770KHz) is S3 on the Wellbrook. A
Lankford Active Dipole stomps it in gain, IP2 and IP3 and for
directivity.

I am wondering if this antenna is defective or if it is a case of the
Emperors New
Clothes. I have tried loops several times in the last 30 years and
always give up
becuase I have never found the reported imunity against local QRM to be
true.
I am building a copy of the WL1030 (http://wl1030.com/), but I don't
understand
the fascination with loops. What am I missing?

For MW DX "big" air loops make sense. Good directivity to null out an
offending
signal. I notice Ron Harding uses McKay 100E with a phaser to achieve
good
nulls. For HF the sky wave "smears" both the desired and unwanted
signals
making a null very iffy.

Receivers used in this test:
R2000
R8B
R390
R392
The R390 and R392 where not tested at my home but at a friend's home
where I have them stored. While I like both the R390 and R392, they are
somewhat awkward to rapidly tune from one frequency to a wildly
seperated
one.

Laptops are hard to beat for RFI issues.

You might want to take a portable SW like a DX398 and go to the local
stores
and check them out. I helped a friend find a low noise HP with my DX398
and
my RFI probe made from ~20 turns of #20 PVC insulated wire on a pill
bottle
form. I measured the inductance and found it to be ~20uH. I went to the
extra
trouble of putting a BNC and built several probes so I could have
different
probes for different RFI searches. I used ~3' of RG174 with a BNC on
one
end and a3.5MM on the other.

Be prepared for some odd looks and hesitation from the sales droids.
They must have thought we were AQ operatives or something.

A very usefull link for info on how to suppress most RFI can be found
at:
<www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf>
Ferrites will work near magic, but you have to use >MANY< more then
commonly
understood.

We, my wife and I, lucked out and we bought some NOS Gateway Solo
PIII 650MHz laptops with reasonably low RFI. Most of the PC RFI now
comes from the switch mode PS. Ferrite quitens it, but I built a couple

of very quite linear 120V to 18V DC supplies with very good filtering
to
keep the PC noise from reaching the AC mains. A bunch of ferrites on
the network and modem make it very acceptable.

Terry

I don't know what to tell you about your experience with loop antennas.
My experience and many others is contrary to yours. Loop antennas are
not a fascination just a good design. I've never used the Wellbrook
antennas so I don't know the construction details. Maybe the antenna is
not constructed properly.

Your complaint about IP2 and IP3 concerns the amplifier design not the
antenna design.

That's a generally valid statement.. I wouldn't waste my time OR yours by doing said pathological criticism except for one small fact. What your government does, good or bad, influences Canada greatly. The American actions sometimes influence us more directly and quicker than the actions of our own government.

The present day sickness in Washington has now dragged us into Afghanistan..a situation which is deteriorating by the day. The Busheviks now running Ottawa foresee an almost endless war. Why are Canadians dying for Cheney's pipelines? It's absurd. Iraq is absurd. Bush and Clinton are absurd. The Congress and the Neocons are absurd.

If the war mongers in your country could conduct their largely illegal adventures in torture and murder without influencing me or my country, I'd never 'bash' them again. As it stands, they are a menace to all life on earth and I'll be damned if I say nothing while they are doing it. I am sorry if you are hurt by this. Remember when Freedom of Speech was a point of honour when comparing your system to totalitarian states? Why are you trying to kill it?

OK Terry,
Keep me informed if you will. NEED has been heard in TN, NC and OH.
WD2XSH/10 is now 589 copy on 504.5 KHz. 0321 UTC.
Can't wait for the season to quiet down and see how loud the west coast WD2
stations are.

I wonder if this is actually the "inverse" of something else?

Plotting it out on a spreadsheet it looks like the inverse of "JI".
Which really doesn't make any more sense than "NEED"!

Nice try. You've been doing this since you were m.moore@utoronto.ca
in the late 90s.

No one is trying to "kill" your freedom to speak. You are just being a pest. This is rec.RADIO.SHORTWAVE. I'd post something about talking with Rob Sherwood this past weekend at a hamfest but it would be lost in the din of you and others shouting past each other.

Freedom of speech? You are exercising your "Freedom to Annoy." It's like I'm trying to sit down in a restaurant for dinner and you are at the next table shouting scat jokes at everyone.

Your comments aren't welcome -- at least, not by me.

Please find a politics group or web site and vent there -- NOT HERE. Perhaps the Daily Kos wants to read what you write... but speaking for myself, I don't want to read it.

Go. Away.

One thing you might do is check the cables connecting the different components of the Wellbrook. At one point I noticed that my loop wasn't performing as I thought it should and I discovered that the cable connecting the receiver to the antenna interface had a poor connection where it meets the interface box. The intermittent connection became obvious as soon as I jiggled the cable a bit.

Also, where do you have the loop situated? In my experience the performance of the loop is seriously degraded when used indoors.

Hi Terry,

I have a homebrew version of the Wellbrook shielded loop 7' in diameter. It is in my woods on a short tower and rotator.
On 160M and 75M it is the same as my 80M inverted vee. It's a good performer on MW/LW but not any real difference between it and a homebrew voltage probe antenna with a 4' whip.

Loops are most useful where there is a single noise source that can be nulled with the loop- other than that, it's a toss up.
There is still the wive's tale making the rounds that shielded loop are immune to the E field noise - rubbish and well disproven in the literature.

So, in summary, I like mine for being a compact RX antenna for MW/LW, but at least in my environment, not sure I would go to the trouble next time.

Hi Doug,
Interesting concept. On AM though, the 1000KHz tone clearly spells out NEED.
In there again last night after sunset.
I was hoping enough readers of this group would try to copy it that we could
find its location. If anyone hears it during the daytime, please report with
your 6 character grid square

According to Ian Sharp, CFRB/CFRX engineer:

"The EB701HF that CFRX uses was purchased new."

And Paul Gregg of Bauer Transmitters, Inc. states:

"The 701BHF transmitter was purchased new by CFRB/CFRX.

The 701 series of transmitters began production in 1971 and concluded in
1992 when the plant in Sacramento was moved to El Paso."

Calbe and connectors are good, and have been used to power
the Lankford active dipole I am checking.

I have tried it in a variety of locations.

We even went so far as to drive to the Red River Gorge, an area well
away
from houses, power lines etc.

The preformance just doesn't strike me as being worth the fairly high
cost.

The active dipole beat it every time.

Terry

I am begining to think that many people over rate a loop because it has
lower over
all gain and therefore is quiter. Based on my experience with improved
detector and
audio chains I have come to understand that the signal to noise is the
only variable
that really matters. I wish my fancy HiFer beacon/test source had not
been fried
by Thor. Even the 13.xxMHz crsytal was toast! It would be interesting
to run some
real experiments to compare antennas the way I compared detectors and
post detection amplifiers.

BTW I have completly ripped out all of my coax and pulled down my
antennas.
Since I got rid of my desktop PC and I have gone to a laptop I found I
really needed
to redesign my radio desk. Since my antennas and coax have been up for
over 15
years, I decided to redo the whole mess.

Fall is a very good time to errect new antennas and I am going to
reroute all my coax
through 1/2" copper tubing that will be bonded to my perimeter ground
ring. An
electrician friend used his mini Ditch Witch to dig me a couple of
trenches. I hope
to have the antennas back up by Monday evening.

I typically research and build devcies in the summer, think about
antennas in teh
fall and do serious listening over the winter.

Terry

> cuhulin

Believe it or not, cuhulin, I'm not going to excoriate you or Chuck Harder here.
Because I think (hope?) that Harder is hanging up his microphone - finally!
Issues aside, let's recount Harder's take on three crucial topics: 1) he is vehemently anti-Bush; 2) he is convinced that the end of the world is coming; and 3) he believes that 2) is the direct result of the machinations of 1) - (in Hugo Chavez's words) "el Diablo."
Any one of these three positions is a definite show-stopper in talk radio these days. But Harder has all three!
No wonder you want to talk about Jackson, MS mayor Frank Melton. Don't know the guy; never heard of him; I like my mayor, Shirley Franklin, who last year presided over the lowest homicide rate in Atlanta - 90 - since 1963. If my history serves, I think that was the year Harder moved from Chicago down to Tampa, FL.
Back to Harder: I've noticed he's been saying things (paraphrased) like, "Hey, people don't like me because I tell it like it is," or "You know, I am not well liked by such-and-such these days." I admire his candor. People like me do dislike him intensely. Why? Because - ironically - he is so un-American.
Most Americans are not apocalyptic.
Most Americans do not think "Dubya" is the devil. They know they can support him or go to someone else.
Most Americans do not believe that Uncle Sam is plotting the destruction of the U.S. of A. Some voters might believe this or that specific conspiracy theory (JFK, energy prices, Ritalyn, etc.) - but they do not buy into the overarching "New World Order" global plotline pushed by Harder and his myrmidons.
Europeans and Muslims may be more attuned to these ideas, but that's just the way they are. I don't live in France or Germany or Iraq or Iran or Jordan or Egypt, so this really doesn't bother me.
So when will Harder retire or go on to something else? Can't say. But his last day on the air is one day closer than yesterday. Heard Ed Shiflett a couple weeks ago on "For The People," and I must say, that bloke sounded real good - a natural. Could he be Harder's replacement?

We'll see ...

Funny, I just heard that on the the shortwave, in this Wednesday's BBC
documentary, Heather Couper on the History of Infinity. (13:00 and
18:00 UTC in the BBC Asian track on 6195, 9740 or 7160).

You just go to the occupants of room 1 and ask them transfer to
the next room, and so on. There's always another room.

To the nice people at RRAP Omega Radio (13.889 mHz?)

Could you please consider playing some of that old great
German World War II Marchng Band music?

You know! That great stuff like the Horst Wessel Song
and others that are easily available online via .MP3 and
a Google search.

I really miss ole Walter W2YEE and his infamous hours-long
'broadcasts' on 20 and 75 Meters during the heyday of the
14.313/14.300/3.894.5 Net wars. It was a REAL TREAT
to hear ole drunken Walter Barstool in there fire up with
his 3-1000Z parallel 'two holer' amplifier and clear up
75 Meters for 20Kc's either side. Plus he was the only guy
to ever master TRUE AM QUALITY Hi-Fi SSB on ham radio
LONG before the jap ricebox makers began incorporating
the same into their radios as nothing more than a clever sales gimmick!

So there you go Omega! Play that good ole goomstophher marching
music and let's all GOOSE STEP around the ham shack again....!!!!

@Allah Ahabar!@ ---> PFHBBLTTTTTTTTTTTT!!!!!!!!!!!!!!!!!

"The laser attacks are a violation of space treaties signed by China and can be considered an act of war according to international law."
...
"There should be no mistake, these are direct attacks on U.S. assets operating in international space according to law."
...
"China has been the global champion of an outer space treaty that would limit U.S. military activities in space, all the while they have been developing their own."
...
"So far the press coverage has missed an important dimension. The tortured language in the DoD PLA report about Chinese use of ground-based lasers dates back to the very first such report in 1998. This indicates to me that Chinese lasing of critical U.S. satellites may preceed that date."
...
"The Chinese attacks on U.S. satellites come as no surprise to NewsMax readers. In fact, I reported in 2004 that U.S. military satellites had suffered a number of attacks by a ground based laser system. At that time Pentagon officials refused to identify the sources of the laser attacks.

"I first published reports and diagrams of a Chinese anti-satellite laser which surfaced in a 1998 Pentagon report. "The table shows a requirement for a 4 meter diameter beam director mirror for an anti-satellite mission," noted the report describing Chinese military efforts.

"The report noted that comments from the director of the Beijing Institute of Remote Sensing and a report issued by the Chinese 1028th Research Institute of the Ministry of Information Industry showed that the People's Liberation Army (PLA) was actively developing lasers for space warfare.

Equipment used in commercial settings is considered Class "A". Class "B" digital devices are those intended for use in the home. FCC limits for RF radiation differ depending on the application of the digital device. The test distances for RF radiation are approximately three times closer for Class "B" than Class "A".

Not, however, the 701B, which was apparently last made in 1983. So the transmitter is, at best, over 23 years old which is pretty ancient considering the advances in technology.

Your statement is like saying, "The first Ford was made in 1902 and continues through today."

"Early in 1983 the decision was made to purchase and install a new 1 kW transmitter for CFRX. The present transmitter was delivered in December of 1983 and was commissioned December 31. The new facility is located in a room next to the CFRB transmitters. The transmitter was manufactured by Elcom-Bauer of Sacramento, California. The design is basically their Model 701B, with the tank circuit of the final stage redesigned and an RF driver stage added after the standard RF oscillator card. The transmitter is now designated a 701B-HF. It is a classic plate-modulated design and is capable of producing high levels of modulation continuously, as is required for a 24-hour-a-day operation of CFRX."

At last it is time. Dr Who comes back to the sci fi channel in a 2.5 hour long special which starts at 8pm EDT. Be there or be square. I even told my girl that we would not go out on fridays while the doctor is on so that we could watch all the shows. Remember. A time lord always wins in the end. Always.

Don't watch it Roger. The show is to deep for you and you won't like the pain of trying to think. On saturday, I might discuss the show on OTDF, so listen for that instead.

Whoop de do!

Dr. Who was stupid 30 years ago. I can't believe it's *still* on.

Actually, yes I can.

> not.

Can you rotate your "70M full-wave horizontal loop"?

And at 70M, or about 230 feet in "diameter", it is a very different
antenna
then a 1M much touted miracle loop. I don't think I was attempting to
compare
3' with 230'. One supposed advantage of the small, fractional
wavelength,
loop is the reported, or should I say reputed, highly directional
charactoristics.
That famous figure "8" pattern.

The dipole to which I am reffering is an amplified, very high IP3 and
IP2 unit with
very good,as in flat gain and very directional, from 100KHz to above
28MHz. I will
have to connect it to my scanner and see if I can receive any 6M ham
comms,
or more likely around here older 49MHz telephones. I suspect it will
run out of steam somewhere just above 35MHz, but I haven't checked. It
will be later next week before
I can do any tests as my "shack" is in pieces and I am reduced to a
DX398 coupled
to a ~50 random wire out the kitchen window.

Terry

Apples and oranges. The current discussion is about electrically small,
rotatable loops.

It's still really old, which was my point. Bauer did not sell many
transmitters in that era. The 701B was a derivative of a "quick and dirty"
model they built to fill the need of about 1,000 class IV stations for new
transmitters when the FCC authorized 1 kw for them. I think they sold
something like 300 at the time, which was quite amazing. The 701B was simply

an old-technology high-level plate modulated transmitter using, if I recall,
glass envelope tubes... maybe the 4-500A.

They had rows and rows of parts, and the rest of the store looked more like CC than RS. All I know is that an experimenter in Ottawa could get a lot of stuff that he/she needed.

And that's okay by me.

Todd doesn't have internet, so he doesn't have an RRAP job like Markie.
He can't be making money off Omega One because the music and his language
is so bad no one would dare buy advertising.

So I guess Todd's day job is to walk down to the mailbox to see if the
welfare check came and to be on the lookout for the white FCC NAL van to
show up. ROFL.

and host enema beer parties for the Omega One staff: Woger, Llooydie,
Stevie, and Markie. Todd says his moms 8-track tape songs are good beer
enema tunes!

SC

Old "wives tale" is a rec.radio.amateur.antenna trash talk phrase.

Were have you been reading that an electrically small shielded or
unshielded loop is sensitive to E field?

That was a self defeating test. The idea here is that you will have a
lower noise floor in a locally noisy area with a shielded loop than a
dipole antenna. There is going to be no advantage to using a loop over
a dipole in an electrically quiet area.

A shielded loop is not better at picking up a distant signal than a
dipole but is less sensitive to local noise generators so in an area
with high local noise you would have better signal to noise than a
full size dipole antenna.

I also expect that a shielded loop would be better than a amplified
electrically small dipole although the difference in advantage would be
smaller than the comparison to a full sized dipole. Depending on the
area a electrically small dipole and shielded loop may not have a
significant difference in local noise floor because you managed to get
both far enough from local noise makers due to their small size.

If you found a problem connection from interface to antenna then I would suspect your findings. As you well know that connection is the power supply to the antenna amplifier and the RF path back to the radio.

"The active dipole beat it every time" is a bit vague. Maybe you could expand a little on that.

Supposedly you are to have good DRM reception with a weak signal so just
a few (2) LEDs representing S units should be all you need over the
background noise measured on the adjacent channels.

A nice page written by some amateur drawing wrong conclusions. Following
his logic coax cable would not shield the center conductor either for
example since the coax has to be open on both ends. He quotes a lot of
good information and then spouts conclusion that don't follow.

I don't have the patience to read the whole page but I scanned through
it and for starters he does not seem to distinguish between far and near
field energy. Far field has equal energy in the E and H fields so two
antennas, example dipole and loop, that are strongly couple to one field
and not the other generate the same power. No real difference then
between antennas that are strongly affected by one field and not the
other to far field signal or noise.

Near field is a different story. Near field is what the local noise
makers generate the most of and the electric tends to propagate farther
than the magnetic from the source so you want to use an antenna that is
sensitive to the H field for the same reason you try to get an antenna
as far away from local noise sources as possible. You can see the logic
in that right?

And let's not forget about that very handy null in the loop pattern. I
use that all the time on the AM portable with its built in loop stick
antenna that is not even shielded.

I understood the B model at some point used 4-500's due to the relatively short life of the US built 4-400 from EIMAC, and the transmitter's inability to use the European QB4-1100 (without major work), which lasted as much as 5,000 hours more than the 4-400A.

KUPD was 500 watts all through the 60's. I do not recall the 701B having a power cutback in the stock model... must have been a modified 701 which was sold as a 1 kw only rig for upgrading Class IV station.

You are such a fool. You have a total inability to read.

I said, in reference to the Bauer, that most were kits and "this would indicate that the transmitter would be 35 years old."

For your dense mind, this means, as anyone with a tad of English would know, that "if the transmitter was one of the kits, then it would be 35 years old." It was later clarified that the transmitter was a later model, and is STILL nearly a quarter century old.

You probably pick in your neighbors' garbage to see what you can fabricate about them, too. If you had been a Roman, your specialty would have been the reading of entrails to find hidden messages in goat's livers.

3154. (OT) : M II - The Ugly Can-A-Duha-Ian Preahing Anti-American-Hate Again !

Newsgroup: rec.radio.shortwave
Date: 2006-09-30 07:32:56 UTC

Source record: 93329

M II,

So tell us about the the wonderful treatment of Canadians
of Japanese Ancestry during WWII . . .
http://en.wikipedia.org/wiki/Japanese_Canadian_internment

* Canada initially sent its Male Evacuees {Husbands, Father, and Sons}
to Road Camps (Forced Labor).

* About 95% of the nearly 23,000 people of Japanese descent who lived
in Canada, were naturalised or native-born citizens.Those unwilling to
live in Internment Camps faced the possibility of Deportation to Japan.

* Women and Children (Wives, Mothers, Daughters and Young Sons) where
separated from the Men and were moved to six Concentration Camps in the
interior of British Columbia.
http://en.wikipedia.org/wiki/Image:Japanese_internment_camp_in_British_Columbia.jpg

* There, the living conditions were so poor that the citizens of
wartime Japan even sent Supplemental Food Shipments through the Red
Cross. During the period of Detention, the Canadian Government spent
one-third the per capita amount expended by the U.S. on Japanese
American evacuees.
http://en.wikipedia.org/wiki/Concentration_Camps

I use the ALA 100. The smaller loops may not be as good on MW. It is a good idea to insure the amplifer is actually doing something. The fuse could be blown, the wall wart bad, etc. Unplug the power connector and make sure the signal strength drops. You will get reception from the loop even if the amp is off since some RF will leak.

Some of the Wellbrook amps were positive ground. The unit is fused and I would guess there is a reverse biased protection diode. If the wrong wall wart was used, it would pop the fuse. In my portable set up, I have red shrink wrap on the connector that goes to the Wellbrook, just to make it clear the ground is backwards.

As far as the 1530 goes, it may not have a good resale value since they released the "plus" version, which has response in the FM BCB.

news:1159601576.019886.243160@i42g2000cwa.googlegroups.com...
M II,

So tell us about the the wonderful treatment of Canadians
of Japanese Ancestry during WWII . . .
http://en.wikipedia.org/wiki/Japanese_Canadian_internment

* Canada initially sent its Male Evacuees {Husbands, Father, and Sons}
to Road Camps (Forced Labor).

* About 95% of the nearly 23,000 people of Japanese descent who lived
in Canada, were naturalised or native-born citizens.Those unwilling to
live in Internment Camps faced the possibility of Deportation to Japan.

* Women and Children (Wives, Mothers, Daughters and Young Sons) where
separated from the Men and were moved to six Concentration Camps in the
interior of British Columbia.
http://en.wikipedia.org/wiki/Image:Japanese_internment_camp_in_British_Columbia.jpg

* There, the living conditions were so poor that the citizens of
wartime Japan even sent Supplemental Food Shipments through the Red
Cross. During the period of Detention, the Canadian Government spent
one-third the per capita amount expended by the U.S. on Japanese
American evacuees.
http://en.wikipedia.org/wiki/Concentration_Camps

* The Canadian Forced Deportation of the Canadian Citizens of Japanese
Descent was a Crime Against Humanity and that a Citizen could not be
Deported from Their Own Country of Birth.

Note - The Canadian-Japanese Citizens had their Property and Businesses
Confiscated and/or Sold.
http://en.wikipedia.org/wiki/Japanese_Canadian_internment

FWIW - Ukrainian Canadian Internment during WWI
http://en.wikipedia.org/wiki/Ukrainian_Canadian_internment

And Yes - The USA's treatment of it's very own American-Japanese
Citizens was a Black-Mark in American History.

http://en.wikipedia.org/wiki/Japanese_American_Internment

CORRECTION - Amateur Radio Band
-or- Shortwave Broadcast Band
http://en.wikipedia.org/wiki/Shortwave_bands

>
> It's pretty much good for a band (1 to 2 MHz wide) cut at the center
> frequency not just one channel.

Yes - The Dipole Antenna is very good for Amateur {Ham}
Radio Operators using it for specific Amateur Bands like :
160-Meter, 80-Meter, 40-Meter, 20-Meter, and 10-Meter Bands

Dipole Antenna
http://en.wikipedia.org/wiki/Dipole_antenna

IMHO - Any Shortwave Listeners (SWL) that has "The Space"
for a 160-Meter Band Dipole Antenna [260 Feet Tip-to-Tip] -or-
an 80-Meter Band Dipole Antenna [134 Feet Tip-to-Tip] would
have a great Antenna for all their Radio Listening needs.
-But- When the Tip-to-Tip available Space starts to get under
about 75 Feet : Then there are 'other' Shortwave Listening (SWL)
Antennas to consider and the Windom Antenna is one of them.

READ - Eight Bands On One Coax - The Windom Antenna

> > a single Antenna.
>

- This won't buy you much.

More then a Dipole Antenna and the better Antenna 'choice'
for the Shortwave Listener (SWL) who wants more then :
160-Meter, 80-Meter, 40-Meter, 20-Meter, and 10-Meter Bands

>
> > 2 - Use a 4:1 Matching Transformer {Balun} for improved

Hearing them in Brooklyn right now on 11850 khz. Can also hear them on 9525, but the signal is stronger and clearer on 11850. Signal occasionally fades out on both frequencies, but right now they're talking about current events in Eastern Europe.

I just checked (before I pulled the plug due to some storm cells in the area)
and found 9525 to be the better of the two at this location.

Checking that fuse is a very good idea. I once blew mine by accident
when a piece of coax I was using turned out to have a short. I didn't
immediately realize what had happened and went a few days simply
thinking that conditions were terrible. LOL.

This ALA 1530 requires a reversed, is shell positve and inner negative,
wall wart. But the center conductor of the coax was positive. I left
the
original power injector/diplexer intact and built my own. I verified
the
problem with the stock wall wart/diplexer before trying my own.

With out power I get virtually no signals. A few very strong MW and SW
at way less then S1. So the amp is working. The original owner says
it always behaved like this. OK, but clearly not the do all end all
of antennas.

Terry

I said 707. A transmitter with stock outputs of 1 KW and 0.25 KW can
easily be restrapped for 0.5 KW.

I see E7 listed as the 'English Man' here:

http://www.spynumbers.com/profiles/index.html?ENIGMA=E7

Is that a typo on their part, or what?

A signal report for some Insomnia radio. I've been picking up the BBC on 5020 kHz early in the morning here (Seattle). 5 AM/12:00 UTC. But it wasn't showing up in any BBC frequency lists for the Pacific or Africa. Then last night/early this morning, I tuned in and found that it was the Solomon Islands Broadcasting Corp. They must switch over and relay the Beeb after it gets too late in the evening there. Listenable if you go for the lower sideband as the Cuban (R. Rebelde?) next door (5025 kHz) is about the same strength. (S2 with thunderstorms).

Very interesting post's on this subject so far. Sure is nice to have
some topics that are about DX & radios.

I did a bunch of CW contesting back some years ago & am very familiar
with W8JI's station. All of the best ops in the country wanted to run
his station during the ARRL 160 cw contest. BIG signal & could work
stations most could not even hear.

My point is I am sure he "knows his stuff".

With that said....I have 2 hf antennas up right now. A wellbrook K9AY &
a wellbrook ALA 1530. The 1530 is mounted at 6ft off the ground
strapped to a wooden fence.

The K9AY always has a signal that shows more s-units. However many
times the 1530 will give a better s/n ratio.

It took me a while to "get over" the lower s meter reading & realize I
was hearing the signal better because of the better s/n ratio.

My location is in a housing project with several houses within 300 ft
of me so the loss in gain was not hurting me since my noise floor was
higher.

Now If I were located out in the wide open spaces with no man made
noise for miles then the 1530 would have no where near enough gain.

All of these are my opinions of course

I saw a bunch of 707's, and they were designed for Class IV stations running
1 kw always, meaning they had no cutback switch. It was brought to the
market when the FCC approved 1 kw day an night for the roughly 1000 class IV
stations in the US, and originally had no cutback. Was there a model with
such?

The issue with using a higher power transmitter for lower licensed fulltime power is that the FCC did not approve usage of such in the 60's and a modified right was likely not type accepted (doable with paperwork, though). A believe the rules did not allow more than 20% or 25% greater transmitter power than the licensed power or higher power if licensed at more than one power level.

The 701 superseded the 707, and used 4.500's. The B model was solid state in the exciter and audio driver, only having 4 final and modulator tubes.

My mistake. I called a guy who actually built a 707 (and maintained several
other Bauers as well) and he said the 707 came as a both a fixed power kit
for staitons with one level and an adjustable second power selection for
those with multiple output levels.

Here is one without the cutback... a 1 kw daytimer on 1290 that had no need
for two power levels.

The 707 was apparently designed to operate at both 1000 watts and 250 watts.

I think they've been relaying BBC during their overnight time for a good number of years. You might also try zero beating the freq., as generally reported they are on 5019.9 or so.

There were a few POW camps that housed German POW's just south of here.

I met a some of the guys in later years who decided to stay here rather than be repatriated.

Perhaps my local noise floor is "good enough" that whatever benifit the
Wellbrook offers is lost. I am trading the newly aquired ALA 1530 to
an acquaintance who lives in downtown Lexington for a Datong
AD370 that was only used for a few weeks.

He is aware of my doubts about the ALA1530's ability but says he has
nothing to loose. When I get a copy of the WL1030 built we will test it
at his condo.

Hot damn! I'm slipping! It wasn't 1740 but 1640.

Oh well, next hour, eh?

I'm already thinking about the time change, I guess.

Thanks to all for the most interesting and relevant thread on this group I can remember. I have a North County antenna in an apartment community and hope someday to have a way and means to install Dale's antenna but right now The North County will hafta' do, and I am amazed how well it works here in central Florida

I'm sure he is a great guy and knows a lot but that does not mean he is right. What he states is against theory and experience. I will go with what practical experience supported by theory over someone's preeminent opinion.

His opinion is contrary to the theory of operation of electrically small shielded (or unshielded for that matter) loops compared to electric field probes (example single wire or dipole).

You possibly misconstrued what you read in the IEEE journal.

We just had a discussion about inductive noise probes for trouble shooting problems. Maybe you missed that. It was discussed here about using a small shielded loop to distinguish between magnetic fields and a short wire probe to pick up electric fields. Now this past discussion relates to very close local induction fields. This is the very situation the author you refer to claims the shielded loop probe would be useless as it would be no different than the voltage probe response. Well sorry, these probes really work as advertised because I used them professionally and successfully.

My experience building and using antennas also run contrary to what the author you refer to states. My experience in antenna building is also predicted by theory. Most other people have had similar experiences using loop and dipole antennas.

Again I will mention that there is a difference between an inductive field and a far field that is a propagating wave and that theoretically there will be a significant difference in response between E and H field

sensitive antennas to the inductive but not the far field.

Interesting. I just checked out the DX Engineering website and it's
worth a look:

http://www.dxengineering.com

I learned, among other things, that they'll soon be marketing a very
expensive phasing unit. If it's worth that much, it'll be really
interesting.

And this is the experience of most people with loop antennas.

Things are a bit more complicated with electrically small loop antennas because amplifiers come into use. Now you have to consider amplifier design along with antenna design to predict performance.

Larger loops require less amplification so the amplifier performance becomes less of an issue.

Full size loop antennas are a little different dimensionally and depending on your house lot you might be able to fit a loop on your lot where you can't fit a full size dipole. This difference in dimensions may allow you get the full size loop farther away from a local noise source.

> of antennas.

What you are calling a "power injector/diplexer" would probably be best
described as a bias-T. This is a three port device:

Sample schematic:
<http://www.smelectronics.us/biast.htm>

1. DC voltage. (DC input) This is connected to the power supply.
2. AC voltage. (RF output) This is connected to the radio.
3. DC + AC voltage. (RF input, DC output) This is connected to the
antenna/amplifier.

Port 3 to 2 is connected with a capacitor of very low reactance (zero)
to the signal you want to pass through these two ports.

Port 1 to 3 are connect with an inductor, which passes DC voltage from port 1 to 3 but blocks RF (high Z) going from 3 to 1 so the RF only sees a path from 3 to 2.

Port 3 and 2 are coax cable and port one could be two terminals. One terminal is common grounded with the coax shield grounds. Using a ground independent power supply to the terminals on port 1 allow you to have either a positive or negative power supply to the remote amplifier.

Apparently so. See:

http://www.sthelena.se/

Then click on Radio St. Helena Nov 4 Revival Broadcast or the Radio St Helena
link on the left.

If I don't catch up with you before then, have a very Happy 69th Birthday, and
good luck with RSH.

The models may cover different frequency ranges so the noise floor may
be different for that reason. Be sure to compare apples to apples.

What do you mean by noisy?

Since this is an amplified antenna the amplifier will add its own
noise, which can be a little or a lot or maybe you mean the
antenna/amplifier has a lot of gain where the atmospheric noise is loud
or maybe you mean it picks up a lot of local noise sources.

Since you are comparing it to a loop I am guessing you mean you expect
the Wellbrook to pick up less in the way of local noise sources?

OK, you've got a point. Stated in plain English, my imaginary transmission line doesn't have any series resistance or dielectric leakage. The resistance of a long run of transmission line can be significant, and would be infinite over a infinate length. Any conductance of the dielectric would limit the DC impedance to some high value in a infinate length.

I just got around to checking out the links, and I see it's a nit worth picking. One of which I'd have been happy to have picked myself, had I caught it.

To those who are interested:

According to the Passband web site < http://www.passband.com > the 2007 edition of PASSPORT TO WORLD BAND RADIO is scheduled to be shipped by them on October 23. I presume other dealers will have it in stock at that time also.

Please let's not start a "pro-Passport" vs. "anti-Passport" argument here - as you all know it is MY OPINION, based on a DXing "career" that goes back almost fifty years, that the yearly Passport as well as the yearly WRTH are indispensable references. It is your right to disagree with me, and I do respect others' opinions, but please do it "privately." Thanks!

This message is for information only.

Best,

Joe

I mounted the AD370 on a tree and connected it to
the R2000 on the kitchen table. With the PS side
amplifier in the off position there is minimal noise.
Compared to "North Country" or the AMRAD it is very
close. With the never to be cursed enough MW station
on 770KHz and another local on 1240KHz I have some
very constant signals for IMD. The AMRAD is imune,
no mix products, the NC has some minor mix + and
a very weak 2nd and 3rd harmonic that is internal to
the antenna under test. The AD370 has a very slight,
as in right at the noise floor, mix + (770+1240) and
maybe a weak 3rd harmonic of 770 (2,310KHz). Hard
to be sure as it is right at the noise floor. I can only
find it with a FFT window.

With the additional amplifier the noise floor really jumps up.
A better amp would likely be the Lankford "ultra linear amp"
at <http://www.kongsfjord.no/>

At this point I have >NO< regrets about the trade.

Terry

Yes, shipped on Oct. 23, and out of date on Oct. 24! A pretty good reference
though with regard to station addresses and equipment reviews.

A good buy for any beginning DX'er.

You mentioned that in your location the smaller Wellbrook ALA 1530 gave a lower
S-meter reading, but was clearer then your Wellbrook K9AY loop. Is it posible
the K9AY produces enough RF to cause your receiver to, so to speak, "fold".

I have found that too much RF, even well removed from the tuned frequency,
can cause many receivers to act "weird". By wierd I am referring to non obvious distortion that degrades intelligibility. Me experiments over the last
~14 months showed me that >ANYTHING< that degrades the signal to noise will impair intelligibility.

I found that every receiver I tested, the boring list at the end, experienced
degraded intelligibility with a long enough wire antenna. Long enough might
be 50' with the DX398, to 1000' with the R390/R392.

Receivers used:
R2000, R1000, PRC1000,DX398, R390, R392, AOR7030+, R8B and several ham transceivers with general coverage receivers.

If you have a RF attentuator, in a pinch a the Rat Shack TV adjustable pad
can be used, could you try an experiment? The next time you encounter a situation where the ALA 1530 gives better, as in increased intelligibility, place
the attenuator/pad inline and see if reducing the incoming RF voltage helps.

Several things I read got me to thinking about the effect of broad band "noise"
and the effect it could have on cross modulation/IMD/IP2/IP3 at the first mixer,
before great selectivity is present. IF, please note the >IF<, the first mixer
adds unwanted RF crap from unwanted, overly strong, RF "noise", then intelligibility
will almost certainly suffer.

"Noise" in this context means every RF signal other then the one you want.

Longer, as in the length of an antenna, is not always better.

Terry

The Datong is mounted next to my DX-1 and generates considerably more noise
Firstly from a poor amplifier and secondly
It is prone to magnifying the local suburban electrical noise which the DX1
doesn't do.
The Datong consists of two five foot whips which can be mounted
horizontally, when it then exhibits the characteristics of a dipole, or it
can be mounted vertically when it performs like a typical vertical whip
antenna. I use it in the vertical position for best results (but noisy).
The Datong is rather poor on MW, but as the frequency gets higher it
performs considerably better. So by 27 megs it outperforms any other antenna
I have used.

I do not own a ALA1530, but two of my pals do, one of whom lives in an inner
city urban environment. It is considerably quieter than his longwires.

It is clear you work in the microwave satellite part of electronics.

In the "good old days", circa 1990, most text and other refference
sources
reffered to them as "power injectors" or "diplexers". Your discription
of it's
function is correct. A power source is isolated from the RF with an
inductor,
or strip line version, and a capacitor blocks the DC from the receiver.

MiniCircuits has very nice, as in wide band, inductors. Since I may use
the same coax for VLF. LF, MW, HF, or VHF my power inject, bias
"T" or diplexer has different inductors in series because I couldn't
find
a single inductor to cover from 10KHz through ~500MHz. I found that by
using smaller chokes that were effective at UHF, with larger chokes for
each decade decrease in frequency. One of the changes I am making
is to use the MC wide band inductors to allow a smaller package to
be used. Space is at a premium in my "shack".

My shack is the 2nd bath with the plumbing removed and covered.
It is 5' by 10'. I prefer the word cozy over cramped.

It is GONE. Traded it off about 3 hours ago.

While John dislikes his AD270, I have found my nearly new, as in
fairly unused, to be a very useful antenna.

Hi Terry,

I agree with what you are saying.

I do not think that is the case for me. I have used the k9AY & 1530 for several years & with various receivers. 756PRO, RX340, AR7030 & many more.

Good example. At 17:00 utc there is a pirate on 6.925 in am mode not USB. It is not real strong here with some fading on the signal. Decent copy on the K9AY but better copy on the 1530 as less noise on the signal but it is 1-2 sunits lower on the JRC NRD545 receiver I am using right now.

Well it was a thought.

I am kind of bummed out.

The WX was forecast to be raining this morning with broken clouds this
afternoon. It has been raining, to be vulgar but accurate, like a cow
on a
rock. I can'w work outside becuase of the rain. And I can't haul the
new
radio desk we made at a friends wood shop because I only have access
to a open pick up.

Bummer!

I did manage to errect the AD370 during a lull and for giggles and
grins
I errected the active dipole that came with a circa 1986 OEM-10 WWV
"precission clock/time receiver" that I was given because it was one of
the few really Y2K non-compliant devices I have seen. The ROM doesn't
support years beyond 1999. Not a problem for me as I almost always
know what year it is! I have one EW and the other NS. So the evening
isn't a complete bust.

However I am reduced to operating from the kitchen table.

At least we don't have any lightning near by.

Terry

Well that time should be 21:00 utc not 17:00utc :)

Anyway the audio went away around 21:03. Now all I have is a carrier
with no audio??

Maybe they are having problems.

Where are you located Terry? I am in Georgetown, KY.

The audio is back on at 21:27.

Wow this has to be the worst broadcast I have ever heard. Something
about James Brown????

All they say is yeah yeah yeah.

Horrible.

Oh well mostly just QRN anyway here this afternoon.

This sounds like your statement that the Level Devil was never used as a
compressor.

There were 707's with the cutback, and 707's without. Our chief in LA has
worked on both (And both of us have worked with the same Bauer 5 kw at KWIZ
in Santa Ana).

Mike,

The two new series, and I expect the third series being made now,
have excellent plots and some of best effects ever made for television.

It is certainly in a far better galaxy than the current abysmal Star
Trek showing in the UK.

Charlie.

I'm selling a used, fully-working Sangean ATS-505 on that terrible online auction website, eBay. I started the auction at the extortion price of $19.99, and shipping for the 5"x10"x15" 2lb package is sure to be a rip-off from the USPS or UPS. I set the buy-it-now price to $59.99 so that people can accuse me of highway robbery. Please don't bid, because this is one of 13 shortwave radios that I own and I simply can't afford to lose it.

Thanks Terry, I'm interested.

I got your Email with the amplifier circuits and thanks. I'll spend more time on them when I get back. I'll probably do a board up.

I've been making preperations for a cross country camping trip. I'm going solo this time and taking 2, maybe 3 large loops. The mission will be to log as many MW stations under 1kw from the campsites at night. Leaving Boston and taking a left at St Louis and going down RT66.

I'm sure I'll have more questions for you on the detector and amplifiers when I get back next month.

regards,
Bob

I probably should have asked for this before I bought one.

I bought a Sony at circuit city for 24bucks. It seems to work ok but I don't think the quality is so good. I opened her up and poked around. Real cheezy. I'll be leaving this in the desert out in California along with my truck full of camping gear and a couple of loops. I'm flying back and so I'm ditching everything cept the radios and tapes and a few clothes.

When I get back I'll probably buy another recorder so I am going to know what I should buy. I had to buy a damn 60db reducer to drive the Sony tape deck from my Degen that has a standard 1v output.

Also I wonder if I should use 60min tapes or 120min tapes.

I prefer to record on my notebook computer. It helps to have a line
input. I record at 22050Hz & mono, so it doesn't take that much space
on the hard drive. Editing on a PC is quite easy with free software.

UNless this is a portable application, surely the best solution is
an actual cassette deck (if you really want to stay with tape). You
get line inputs, with volume controls and no AGC. You get level
indicators. You can select the type of tape (regular, CRO2, metal),
and decide whether to use Dolby or not. The line output makes it
easy to hook to your computer when you want to turn the tapes into
CDROMs. SOme even do auto-reverse. They all have pause controls,
letting you prepare for recording without letting the tape roll.

The only disadvantage, other than size, is that they generally
don't have a means of remotely controlling the motor, so it's
messier to make it start recording at some specified time.

And of course, few people are using cassettes anymore (I notice
I'm not even seeing "Walkman" type portable cassette players at
garage sales much, it's now progressed to the equivalent in CD players
for only a few dollars), so they are plentiful at garage sales
and rummage sales, and real cheap. I got one a few years ago, a dual
deck, for all of one dollar. I brought home another one, it seemed
a bit fancier, from a rummage sale when we were putting the boxes away
afterwards; nobody had bought the two that were for sale.

Since they are cheap, one could open it up and break the wire to
the motor, bringing out the leads for remote on/off, just like
the portable cassette recorders of years gone by. Most use a low
voltage DC motor, just like the portable cassette recorders, so it's
the same thing.

I"ve bought long prerecorded tapes that have become mangled on some cassette players, so I wouldn't recommend 120 minute tapes. They have to make the tape thin in order to fit it all inside the cassette shell, and that makes it too fragile. I've never had a problem with 90 minute tapes, though.

Michael

About 8 miles south of Lexington.

Man you are too close to Radio Mart up the road in Sadieville!

There is a local SWL group,
"Bluegrass DaVinci Fellowship
Central Kentucky Group of Shortwave Enthusiasts
http://www.bluegrassdavinci.com/ "

But I am not much a group person.

Terry

Ken and Terry: For several years now I've been using a 1/3 off-center fed, coax fed 90' "Windom" that uses a homemade 6:1 toroidal impedance transformer at the feedpoint. The antennna does not make galvanic connection at all to the 50 ohm coax feed line but just forms the high impedance "primary" on the Z-xfmr. There are also no ground connections at the antenna. The wire is suspended about 6 inches above my 5' high west facing concrete wall. This antenna outperforms everything I've tried. In some cases my 260' end fed long wire with passive preselector has higher signal strength but the S/N ratio on the Windom is always better. This antenna does well from 2 to 30 MHz. I purposely started rolling it off about 2.5 MHz to help avoid local MW stations by adjusting the inductance of the Z-xfmr windings.

I stopped proclaimin cuz folks in here were complainin bout my
proclaimin.

Anyway, the net is on 3922 tonight. Very unusual freq for them. Some
slackjawed yokels are in there now having a QSO over the net and trying
to jam it with music. Almost like the good old days.

That's supposed to be the solution but wouldn't it take an infinite amount of time for all the occupants to move? They can't all move instantaneously. The occupant of room #1 has to tell the one in room #2 to move and so on, ad infinitum.

Here you are, with your non-answer, pretty conclusively proving that you have never worked on a Bauer. You have probably never even seen one on the outside. This is why you do not know that there was a 1 kw-only version of the kit, intended for stations that were not Class IVs that had to cut power. The whole idea of the 707 was to provide a very cheap transmitter for small stations... thus the kit.

Obviously there is a market for boomboxes from the early 1980s. The bigger, the better. BTW, isn't 1981 a bit early for LCD displays like that? I can't recall.

Everything I threw away is worth more than the stuff I kept.

Yeah, sure, right, whatever. Because "effects" are *so* important.

Most broadband bias-Ts have several inductors in series. At the RF line you start with the smallest value inductor and work your way up to larger values. With several inductors in series you might run into some problems with the inductors ringing so you may need to have resistors across some of the larger inductors. Since you are only interested in DC on the bias port and not modulating the carrier from that bias port you should be able to do it. You may manage to do it with two inductors in series and so not have any problems with ringing.

although for the past 25 years I have tried to know about every shortwave
radio made in the time period, I have never seen this model before,

It certainly looks most imposing ! I wonder what the sound and performance
is like ???

I got outbid at about $100 plus !

probably the part where people pay twice what something is worse.

like a lot of the housing market, for example where morons pay $600,000 for a condemned house in the bay area of san francisco ! then they wonder why they have to pay so much ! MOVE ELSEWHERE ! if you have to have 17 roommates or work 4 jobs, you are living in the wrong city !!!!!

mr. ChuChu set off a 128 post thread of hate of other peoples and other tidbits of not niceness.

so why is the group so tolerant of him, but if I post a warning to save someone from getting ripped off by someone. I get a whole bunch of attacks on me.

why is hate so acceptable to the group and my warning with an intention of good for others meet such evil intent from people.

has the human race sunk that far into the depths of evil ?????

You are on a good line of thought alluding to IP2 and IP3 being worse at
higher signal levels since in a power series equation the terms that
dictate the power of IMD products are higher order terms and so they
increase at a faster rate than the signals that generate them.

Generally you lower power levels so that the IMD products are just above the noise floor of the spectrum analyzer for best results. All signals must be in the DUTs linear range for an IMD measurement to be valid.

Let me go see that radio in my bathroom,,,,,,,, Magnavox D8040
Freetimer 2 Band Spatial Stereo Recorder.AM FM Cassette,it looks and
works as good as new.I bought it at the Goodwill store about ten months
ago.I own some other AM FM Stereo Cassette radios a lot bigger than that
one too,Pioneer and Sony.The cassette player in the Pioneer radio quit
working.I dont use casettes that much anyway.They might not be as big as
the one in that ebay listing,but they are big lonnng radios.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. For multi-use bands, most common usage is shown. Some stations operate outside official bands. Information is from Jan 2006 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

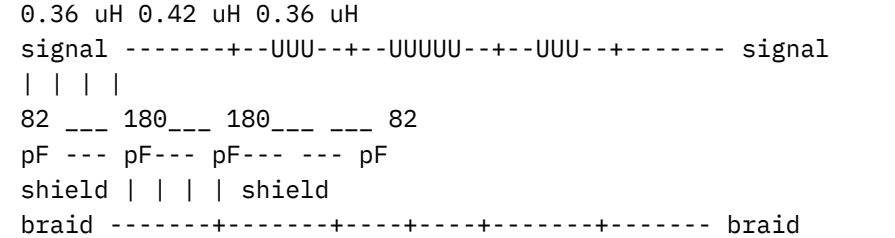
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:

Magnetic Loop Antennas Receiving
"Small Receiving Loop Antennas"
http://www.w8ji.com/magnetic_receiving_loops.htm

* Small Loop Antennas are often referred to as "Magnetic Radiators".
Folklore claims a small "Shielded" Loop Antenna behaves like a
sieve, sorting "good magnetic signals" from "bad electrical noise".
http://www.w8ji.com/magnetic_receiving_loops.htm

* Nothing is further from the truth! At relatively small distances a
small Magnetic Loop Antenna is more sensitive to Electric Fields
than a small Electric Field Probe type Antenna.

For One and All,

Wellbrook Active Loop Antenna ALA 1530+ {Plus}
http://www.wellbrook.uk.com/ALA1530plus.html
Broadband Active Loop Antenna
Coverage : 50kHz to 100MHz

WellBrook Communications (UK)
http://www.wellbrook.uk.com/index.html
WellBrook Products => http://www.wellbrook.uk.com/products.html

* The Wellbrook Active Loop Antenna ALA 1530+ {Plus} is a compact
Active Magnetic Loop Antenna primarily designed to provide improved
performance over conventional passive and active antennas.
http://www.wellbrook.uk.com/ALA1530plus.html

* This new ALA 1530+ {Plus} Wellbrook Active Loop Antenna is the
optimised version of the world renowned Wellbrook Active Loop Antenna
ALA 1530.
http://www.wellbrook.uk.com/ALA1530plus.html

* The Wellbrook Active Loop Antenna ALA 1530+ {Plus} is designed to
provide much lower intermodulation when used in a high AM Broadcast
signal areas. The ALA 1530+ Broadband Loop has been specifically
designed to reduce intermodulation products to a minimum. The second
order and the third order intercept points are typically +75dBm (IP2)
and +41dBm (IP3) respectively. Thus the level of the intermodulation
products are generally below the atmospheric and man made noise.
http://www.wellbrook.uk.com/ALA1530plus.html

* The Wellbrook Active Loop Antenna ALA 1530+ {Plus} is probably the only Commercial Active Antenna available to the Radio Enthusiast to provide directional reception of the LW/MW Bands and the FM Broadcast Band.

Not a bad price at $400 with Free Shipping within the USA.

Figure the 'new' NIB Price of $550 with a 30% Discount
($550 x 70% = $485 and $15 for Shipping = $400)

What the hell does the 707 have to do with CKFX?

Pay attention, dipshit.

Who gives a shit, 'tard boy? CFRX doesn't use a 707, they use a 701B-HF.

And you've been wrong, wrong, wrong all along!

Now pull your swollen head outta your fake Hispanic ass and move along.

Don't worry Mike, there are a few out here who appreciate on topic
posts and radio related information.

The crap comes from ignorant losers who are so useless in real life
that no one likes them or speaks to them. The only attention they get
is by posting the stuff that should get them PLONKED. Imagine how
pathetic, how low on the evolutionary scale, those slugs are. Miserable
and despised in real life, their only hope of having anyone pay attention
to them at all is to spew garbage. Pitiful excuses for human beings.
Probably impotent as well. They can't have sex so they
do their best to f*ck with people here.

What bothers me more is that group subscribers respond to them and keep it going.
Luckily my filters and killfile prevent me from even getting the headers
of 80 percent of the bilge. Most of the messages I see now are on topic.

3298. Antenna question

Newsgroup: rec.radio.shortwave
Date: 2006-10-01 13:14:51 UTC
From: Unrevealed Source <unrevealed_source@nospam.com>
Message-ID: <XaPTg.2$8w2.1@newsfe04.lga>
Source record: 93474

My outdoor longwire antenna works just about as well as I could imagine. Very long wire, very high, attached to shielded 50ohm coax about 40 feet from the house to avoid all the noise, and connected through a MLB. I get amazing reception on all my radios.

So now I have a second "listening post" on another floor, and have decided that I'll feed a high-impedance antenna to that spot. Some radios, mostly my older ones, don't have a low-impedance input, just the normal slotted-screw antenna wire hookup. This will give me an easy way to play with these.

I might try a slinky outside, or maybe not. (Any real-world opinions on a slinky vs. long wire?)

My real question is this: Can I use similar 50ohm shielded coax as my feedline, to take advantage of the shielding and get the antenna away from the house? I would of course not use the balun or even the connectors, just connect the antenna to the center conductor, and strip away enough inside the house to connect the center conductor directly to the radio. Will this work? Is it a sound design?

Thanks,
Jeff

I think the cutback kit consisted of a double throw power contactor
for the B+ transformer primary, a time delay relay, and a switch.

Use the ''balun'' to match the wire to the transmission line. Connect
the center conductor of the transmission line to the ANT screw on the
receiver, and the shield to GND. Ground the mess according to local
codes.

The International Listening Guide apparently has suspended
operations. A check of its web site <www.ilgradio.com> produces this
notice:
"Project temporarily stopped because:

- copyright violence
- censorship pressure by IBB Washington
- spam-mail and form-mail (about 700 a day)

After successful solution of these problems it will be decided later if this
project will continue or not ...

The DAB service is free to air, with no subscription required.
It's basically MP3 type data transferred via high VHF to the receiver,
where the data is decoded to audio. I think it's in the 400MHz area.

The discussion had moved, via David's post, to the 707 which he mentioned he
knew had been used by KRIZ and KUPD in the 60's.

Your have ADD or sumpin?

The point all along was that this is a very old transmitter, using old
technology. There is a reason it is off the air, which is the same reason it
is hard to make a 70's car run: it is worn out.

I was _building_ transmitters, consoles and entire stations from scratch
when the Level Devil was still being sold. Larry Cervone himself actually
tried to sell me one.

Every manufacturer had audio processing gear, mostly intended to protect
from overmodulation, in that era. When CBS introduced the Volumax and
Audimax, it was realized that processing could be cleaner and more
effective.

Yep. There were also several power supply options when you bought the kit.
There are still a couple of people around LA who actually built 707's from
the kit and remember them well. I understand one is in use as a ham
transmitter in the Antelope Valley, too.

Thanks David, but the balun matches the high-impedance longwire to the low-impedance antenna input. Now I'm connecting to a high-impedance input, but want to achieve the same level of shielding.

I solved my SWL antnenna noise problem by using 120 feet of 50 Ohm quad
shielded coax to a 30 foot vertical antenna in the back yard. I used a
Shortwave Antenna Longwire Transformer Balun - #LMZ-50 SWL Matcher,
which was made and sold by ERICKSON ENGINEERING. You must ground the
outside of the coax to the service ground. I also use a ground rod
with 6 gauge copper wire to the shack. My roof feed through
arrangement is shown at:
http://ph.groups.yahoo.com/group/Shortwave-SWL-Antenna/photos/browse/85e7
You should be able to get good results with just one of the baluns,
If you think you really want a High Z input to the radio, you could use
a second one of these transformers at the radio. The full description

of the balun is: ---------------->
The purpose of this device is to match high impedance of the longwire antenna to your low impedance receiver. Since a longwire antenna is usually quite high in impedance (approx 400 to 700 ohms) you will have considerable loss if you connect the wire directly to your low impedance antenna terminals on your shortwave receiver. So by adding this device at the end of your longwire you will increase your receive signal strength a considerably amount on many frequencies across the HF bands. By using coax for your feed you will also greatly reduce the noises caused by TV's, computers, home lighting systems and other electronics so that you can receive with much better clarity then with a single wire through your window to the receiver. This device is also shunt-fed so that static discharges are sent to the ground of the coax rather than to your sensitive receiver front end. Some experimenting with the length and height of your longwire may be needed to help your reception even more. A length of 25 meters (approx 80ft) of wire is recommended for best results, however if you have limited space to work with a length of 30ft or more will give very good results This wire does not have to be in a straight line to be effective as L or Z shapes can work as well. The LMZ-50 is for use on radios with low-impedance (50 ohm) antenna connection.

The LMZ-50 antenna match is designed for 50 ohm coax using PL-259 connectors on the coax. This is a special 10:1 Voltage Balun for matching a longwire / random wire to 50 ohm coax down to your shortwave receiver. The ground is carried down through the coax and then to the radio. The radio receiver will then provide a ground to an outside ground rod. An optional tuner / preselector can be placed between the coax and the receiver.

Receive Frequency Range: 500KHz - 55MHz

THE LMZ-50 CAN BE USED ON LOW POWER TRANSMITTERS UP TO 10W (HF ONLY)

For information on WIRING and GROUNDING with the LMZ-50:
http://tinyurl.com/lnwcn

These impedance matching transformers are encased in a durable PVC housing with heavy duty stainless steel connecting hardware for the antenna terminal. This device is sealed from the elements and designed for the weather. However it is always good practice to cover the PL-259 connector with coax sealant tape to prevent water in your mating connection.

Source record: 93503

The last sentence in one of the paragraphs says it all. The balun "is for use on radios with low-impedance (50 ohm) antenna connection."

The question is what if the radio doesn't have that, and you want to connect the outside long-wire to the high-impedance input? It seems inefficient to use two baluns, one on each end.

3328. Jordan on 11960 in English

Newsgroup: rec.radio.shortwave
Date: 2006-10-01 16:34:20 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <451FEE0C.7D0C360B@milestones.com>
Source record: 93504

** JORDAN. Joe Hanlon, NJ, tells me R. Jordan is on 11960 instead of 11690 Oct. 1 at 1605, news in English. Away from the RTTY and other QRM, but probably just a mistake. Get it while you can! Out here, only a weak, fluttery signal, presumably that. Their DST time unchange does not come for another 4 weeks
(Glenn Hauser, OK, DX LISTENING DIGEST)

Nice signal here.

Then suddenly off about a minute after I posted! Though their regular sked says it runs to 1630 I seem to recall them running over a bit. Merely relaying an FM outlet in Amman for English.

Would be nice if the did stick to 11960 versus 11690.

"Just like it reads" means you care. If you *could* care less, that means
you care. If you care so little that you *couldn't* care less, then you
really don't care.

So do you care or not?

Mike

Again just like it reads. Yes I think it was a good resource but stuff like
DX posted makes it not worth the effort. If there wasn't so many problems
associated with the data base and the people who run it, it would be great.
Ok?

....sounds to me more like a dwindling readership / subscription
base, the typical hams and swl's copying other's work (hams are
the cheapest bastards on the planet next to operators of chinese
take out resturants in strip malls of course) so as not to have to
pay $2.00 for software, and of course the a-typical un-balanced
response of hams in general to anythink they don't like on Usenet
where they act like 8 year olds in a sandbox or a kiddie pool..

(I reference Rec.Radio.Amateur.Policy as an example
for complete proof of all the above - how so typical.
The smelly cheap bastards ain't just going to hamfests anymore - grin)

Get ahold of one of George Hayduke's early Book of Dirty Tricks.He says Hitler had some German prisoners in a German prison at the Polish border.Some of the German prisoners were injected with a drug by the name of Skopedal (spelling) and they put Polish uniforms on the drugged German prisoners and they turned them loose outside of the prison.The German prisoners dressed in Polish uniforms started attacking the German prison.

Whether that is true or not,I do not know.y'all can take it up with George Hayduke if y'all want to,maybe he has some kind of proof or evidence.I used to have that book here years ago,it was in my old shed in my back yard.The roof sprang a leak and the book got wet from the rain so I threw the book away.

Ok, thanks Misters Black & Miso. I'll grab some 90min tapes and plan on using the pause control. Maybe next expedition I will have a laptop with me. I see how it could be very useful for logging, maps, pointing arrays, downloading porn, communicating with message boards, and a plethora of other as yet unthoughtof tasks. The problem for now is that I have to travel light and a laptop is just too much to have to worry about if vehicle breaks down and I have to thumb it. My only power is 12v cigarette lighter so I do have that limitation. I built a charger for AA batteries from lighter socket so that is all I have.

Hmm. I wonder what he means by "censorship pressure by IBB Washington".
I wish he'd gone into a little more detail about that...or maybe that's
part of what was 'censored'.

Steve

You need to match the wire to the coax a lot more than you need to
match the coax to the radio.

The rule is Low Z can feed High Z, but High cannot feed LOW. Think of
pipes. Low Z = Narrow Pipe; High Z = Fat Pipe. Water can flow from
narrow pipe to fat pipe but not vice versa.

29 bids and a price of $2025.00 with 2.5 hours to go!

If I recall correctly I paid around $850 each for the three I've owned. (Only one here currently
though).

Frank obviously is too young to have lived this transition. The first Audimax and Volumax (pre-gating) were good, but not too much better than the other units which, as he says, were intended to prevent notices of violations. It was not until the neat pair of white CBS boxes with their adjustable gate, caged circuit boards and totally transistorized circuitry that it became very obvious that processing was a tool that could be used to sound better and louder than the competition.

Overall, a pretty good overview of processing. For brevity, it does not discuss the home built processors used widely in the late 70's and early 80's and Greg Ogonowski's contribution to multiband processing in th epre-optimod era.

Like most other members of the GOP Senatorial Old Boys Club they
allegedly all share a strange attraction to young males. For some reason
these
silver haired old perverts in DC believe the notion that "the youthful male
essence"
carries something 1000 times more powerful than Viagra, so they like to
have
their weekly cornhole'ing and suckoff sessions with 14-16 year old Page
Boys
to keep their shriveled old cocks functioning long past the time they
should have given it all up. (Google the "The Franklin Coverup" and read
about it)

Just think of it as just another 'fringe benefit' of holding high office.

30 bids now with a half hour to go. It looks as though the high bidder put in another bid
to cement his
position.

Heh, and there was an R8B that popped up on Ebay a few days ago with a "buy it now" price of $1250. I thought that was insane then...I guess I could have picked that up and then 'flipped' it for a nice profit to one of these bozos bidding it up.

The thing that amazes me is that there's not one, not two, but THREE people who have placed bids of over $1500 for this thing. 45 minutes to go and holding steady at $2025 - look out for last-minute snipers!

And to think I snagged an R-5000 there recently in the $300 range. The R8B is a good radio, but there's no way it's 6 or 7 times as good. ;-)

Well, it is a *Drake*! The R-5000 is a great radio, I had one here for several years, nice audio. The only
thing I had to do with it was change out the stock 6 kHz filter which wasn't all that good.

> work? Is it a sound design?

There are three things to consider:
1. Antenna impedance.
2. Transmission line impedance. (example 50 ohm coax)
3. The receiver input impedance.

1, 2, and 3 all have to match.

Lets pretend the radio input is 500 ohms (to ground and the antenna is
also 500 ohms but you want to use 50 ohm coax between them for
receiving. You could use an UNUN on both ends (example the MLB) on the
antenna end and make a UNUN at the coax to receiver input. You would use
the same ratio as the MLB only use the windings in reverse so antenna
step down and at the other end step back up to the radio input.

Hi Mike

I take heed when you post your warnings.
They ARE appreciated at least by me. The human race has sucken that low,
yes. If there is something to do with their sick minds, and they have the
time, they will engage in it. These things point to the last days of our
race. Yes, I'm one of those believers that our existance on this planet is
slowly getting ready to expire.

Evil is winning and good is getting chased
down and shot.

But please keep up the good work because it counts more then you know.

Lucky

Hi all,

I have been reading some of the antenna threads on here since I am replacing a poorly made dipole, and have a question. I think I have decided to make a receiving antenna similiar to the grove skywire. It is 66' long with the feedpoint at 22'. I assume that this is similar to a Windom. That actually fits me pretty good, I have a tree that is 22' from my house, and the house is 44' wide. So I can run the short piece to the tree, and lay the long section on my roof. Here is the question: Which side of the antenna (long or short side) goes to the shielded section of the cable? Is the cable a big factor? I have a half a spool of tv cable I could use instead of buying something new. Thanks in advance.

Bill

Well check for it again tomorrow on the same frequency as Daniel L. Srebnick posted on dxldyg that the frequency of 11960 was *announced* so hopefully a new frequency as 11690 is just totally hopeless what with the RTTY QRM and all.

You are supposed to use a BALUN not a direct connection from coax to
antenna. Basically this antenna is an offset dipole with a higher
impedance than a centered dipole. If you want to make the direct
connection anyway just to try it connect the longer wire to the coax
center conductor.

Jim, Here's a good place to start. Simon Mason has compiled a lot of
good information on numbers stations. One of the best known, and
probably easiest to catch, is the :Lincolnshire Poacher".

http://www.simonmason.karoo.net/page30.html

Now that it is demonstrated that Drake can get more for its R8B radios
maybe they will re-start production. I think a paid around $1450.00 new
for mine. This used unit sold for + $500 over that. A bit more margin to
cost there.

David, I have to disagree here. A narrow pipe has a greater impedance to flow than a fat one. Water can flow from either pipe to the other with no difficulty but will change velocity. The rate of flow will stay the same, with the velocity change compensating for the change in cross sectional area.

Electricity doesn't give us the option of variable flow speed, so something else has to give. Generally it is a varied total volume of electrons delivered per unit of time, pressure(V) remaining the same.

NB. No viscous or any other forms of friction or drag coefficients were hurt in the composition of this article.

3398. DRESSLER ARA-HDX-100 $350 shipped

Newsgroup: rec.radio.shortwave
Date: 2006-10-02 00:42:05 UTC
From: "bfdp1@msn.com" <bfdp1@msn.com>
Message-ID: <1159749725.925007.252340@m73g2000cwd.googlegroups.com>
Source record: 93573

Really need to sell this guys so here is the "deal" Universal sells
them for $550

My PRICE IS $350 shipped.....

ARA HDX 100 Active Receiving Antenna

40 kHz -100 MHz High Dynamic Range Model for urban locations. For
Base and Mobile, Land and Maritime (Useable through the FM broadcast
band)
Applications:

VLF and HF Shortwave listening
Scanners, Monitoring
Commercial Communications

ARA HDX 100 Technical Specifications:

Type: Omni-directional whip
Polarization: Vertical (may be mounted horizontally)
Whip material: Fiberglass
Frequency: 40 kHz - 100 MHz
Gain: 7.5 - 9.5 dB
3rd order IP3: +55 dBm
Noise Figure 4 - 6 dB
DC Power Supply: 12.5V @ 200 ma (included)
The HDX models are designed to withstand a higher level of ambient
signal level and are best suite for urban locations with high ambient
RF levels or any other site in close proximity to high power broadcast
or other communication transmission services.

Coax/Connectors: 40' RG - 58U, Type N(F)/BNC (M) with PL-259 adapter
The coax is connectorized at antenna base The ARA antennas are small,
light and very easy to install. Even indoors, they provide excellent
performance across their entire band ranges without any tuning. The ARA

HDX-100 compares favorably with long wire antennas in terms of signal
strength. In addition, the ARA products are "Electrically Short" and
offer the advantage of receiving a lower level of disturbances due to
electrostatic discharge and other man made (QRM) noise. The ARA low
profile also offers wind resistance to 100 MPH, when mounted on a
suitable structure.
All standard ARA models provide about 7-15 dB of gain (depending on
the model) and low noise figures which can enhance the sensitivity of
most shortwave receivers. LMR-240 (Ultra-Flex) low loss cable is now
included as "standard" with all ARA UHF products. The low loss
cable typically increases signal sensitivity by about 6 dB* as compared

to using standard RG-58/U cable.

==========
US soup kitchen users on the rise

AP , WASHINGTON
Friday, Feb 24, 2006,Page 7

More than 25 million US citizens turned to the nation's largest network
of food banks, soup kitchens and shelters for meals last year, up 9
percent from 2001.

Those seeking food included 9 million children and almost 3 million
elderly, says a report from America's Second Harvest.

The moving (ripple?) would take forever, but the inconvenience to each occupant would be rather short lived. I'm more worried about the new visitor. If there are already an infinite number of guests in the hotel, where did the guest appear from? ... and are there fire regulations being broken by overbooking the rooms?

Wouldn't the DC resistance between a coax sheath and the inner conductor
actually DECREASE as length increased? An infinitely long cable should
have ZERO resistance between the two, as the dielectric resembles an
infinite number of very high value resistors in parallel. Paralleling
resistors lowers total R.

He's another no-code retard in a world that's flooded with them. They
fucked up when they dumbed it down to the point where mark morgan and his
ilk could get a license.

Now they're drowning in the retard stew.

Swim faster, fucktards.

Yeah, but the US only has to take care of a couple of percent of the
population this way (always has), while in Cuba, it is more egalitarian:
everybody suffers the shortages.

==========
In the United States, suffrage is determined by the individual states,
not federally. There is no national "right to vote". The states and the
people have changed the U.S. Constitution five times to disallow states
from limiting suffrage, thereby expanding it.

http://en.wikipedia.org/wiki/Suffrage

Oh yes .. and let us conveniently forget Gary Studds (D. Mass) who also had a fling with the youngsters in DC in the early 80s.

And then there was Barney Frank (D. Mass) whom, rumor had it, was running a boy brothel out of his DC home in the mid 90s.

And not a lot was said in the media after *their* preferences were made public.

GOP=NAMBLA indeed.

Hang all molesters - regardless of political or religious affiliation.

I used to have a fig tree and a pear tree in my back yard and I used to grow some peanuts (peanuts are vegetables,tomatos are fruit) in my back yard.In June of this year,I had two seventy feet tall pecan trees (one in my front yard and one in my back yard near my house) in my yard cut down and hauled off because they were too close to my house and leaning toward my house.I still have a great biggggggggg pecan tree way out in my back yard.Yum Yum,home made Pecan Pie and home made chocolate candy with Pecans in it.Gals,doesn't that just make y'all drool?

I remember a big stink and huge investigation over Studds' escapades, and
there was a lot of talk then about several others being involved. Also was
talk of killing the page program. Don't know why that never happened.. I
think it's a bad idea to have the program, personally.

I believe Barney Frank is still in, so I seriously doubt the verosity of
that particular rumor.

But, yeah.. prison should be an equal opportunity for all in this regrard,
despite political or religious affiliation.

Good price and the seller is straight up. If he says it's new, it's new.

I've bought about 4 radios from him in the past and they were a little nicer than he said.

All internet sellers should be as honest as John Miller.

perhaps you should change that to "Nice little story about a couple of
CBer's who took matters just a bit too far".

1. they were not hams in any way, shape or form (you can check for their
names on qrz or the fcc database to verify that)
2. they got in an argument on CB radio
3. they shot each other in a public place (A duel).

end of report.

where in that story was ham radio (or the no-code debate) ever mentioned?

WINDOM => http://www.cebik.com/gup/gup9.html

Shortwave Broadcast and Amateur Radio Bands
http://en.wikipedia.org/wiki/Shortwave_bands

BUILD A FOUR (4) WIRE WINDOM ANTENNA
FOR SHORTWAVE LISTENING (SWL) :

1 - Four (4) Wire Antenna Elements that are
each cut to a Quarter-Wave-Length (1/4 WL) in Length.
+ Top-Long-Arm Horizontal (Flat) Wire Antenna Element
cut for the 49-Meter Band at 40.5 Feet
+ Top-Short-Arm Horizontal (Flat) Wire Antenna Element
cut for the 31-Meter Band at 25.8 Feet

+ Bottom-Long-Arm 30* Sloping (Angled) Wire Antenna Element
cut for the 41-Meter Band at 33.5 Feet
+ Bottom-Short-Arm 30* Sloping (Angled) Wire Antenna Element
cut for the 25-Meter Band at 15.9 Feet
Note - The Top-Flat-Arms are 66.3 Feet Tip-to-Tip
and the Bottom-Sloping-Arms are 54.1 Feet tip-to-Tip

2 - Four-to-One Matching Transformer ((4:1 Balun)

3 - Coax Cable feed-in-line with a Vertial-Up-Leg of about 18 Feet.

TABLE : Windom Antenna "Multi-Band" Quarter Wave Length (1/4 WL)
Shortwave Band = 1/4 WL Wire Antenna Element
120 Meter = 102.5 Ft.
90 Meters = 74.5 Ft.
75 Meters = 62.3 Ft.
60 Meters = 50.2 Ft.
49 Meters = 40.5 Ft.
41 Meters = 33.5 Ft.
31 Meters = 25.8 Ft.
25 Meters = 20.7 Ft.
22 Meters = 17.9 Ft.
19 Meters = 15.9 Ft.
16 Meters = 13.9 Ft.
13 Meters = 11.4 Ft.
11 Meters = 9.5 Ft.

Ann Coulter said Kitty Kelly has syphilis, (spelling) the ''syph''. I do have one of Kitty Kelly's books here which I bought at the Goodwill store a bunch of months ago,I don't remember the title of the book.I am going to the Goodwill store tomorrow afternoon,but first I will stop off at the Waldensbooks book store at Metrocenter Mall (the front entrance doors of the Sears store at the Mall is 275 foot steps from doggy's front yard. www.metromalljackson.com) and if the book store doesn't have one of Kitty Kelly's books The Family in stock,I will get one of those nice sales ladys to order The Family book for me.Yesireee,,,, I have got to read that book.

DRESSLER ARA-HDX-100 $350 Shipped
http://groups.google.com/group/rec.radio.shortwave/msg/a50af593a92cb59c
- - - - - Message-Reads - - - - -

Really need to sell this guys so here is the "deal"
Universal sells them for $550

My PRICE IS $350 shipped..................

ARA HDX 100 Active Receiving Antenna

40 kHz -100 MHz High Dynamic Range Model for urban locations.
For Base and Mobile, Land and Maritime
(Useable through the FM broadcast band)

Applications:
VLF and HF Shortwave listening
Scanners, Monitoring
Commercial Communications

ARA HDX 100 Technical Specifications:
Type: Omni-Directional Whip
Polarization: Vertical (may be mounted horizontally)
Whip material: Fiberglass
Frequency: 40 kHz - 100 MHz
Gain: 7.5 - 9.5 dB
3rd order IP3: +55 dBm
Noise Figure 4 - 6 dB
DC Power Supply: 12.5V @ 200 ma (included)
The HDX models are designed to withstand a higher level of ambient
signal level and are best suite for urban locations with high ambient
RF levels or any other site in close proximity to high power broadcast

or other communication transmission services.

Coax/Connectors: 40' RG - 58U, Type N(F)/BNC (M) with PL-259 adapter
The coax is connectorized at antenna base The ARA antennas are small,
light and very easy to install. Even indoors, they provide excellent
performance across their entire band ranges without any tuning. The ARA

HDX-100 compares favorably with long wire antennas in terms of signal
strength. In addition, the ARA products are "Electrically Short" and
offer the advantage of receiving a lower level of disturbances due to
electrostatic discharge and other man made (QRM) noise. The ARA low
profile also offers wind resistance to 100 MPH, when mounted on a
suitable structure.

All standard ARA models provide about 7-15 dB of gain (depending on
the model) and low noise figures which can enhance the sensitivity of
most shortwave receivers. LMR-240 (Ultra-Flex) low loss cable is now
included as "standard" with all ARA UHF products. The low loss
cable typically increases signal sensitivity by about 6 dB* as compared

to using standard RG-58/U cable.

Those look cool, but I am skeptical of its abilities. What can you
pick up with it, without adding an external antenna?

US,

Using the Right Matching Transfomer at Both Ends of the Coax Cable :
[ When using the Radio / Receiver's HI-Z Terminals ]

1 - Long Wire Antenna-to-Coax use a 9:1 Step-Down-Transformer.

2 - Coax-to-Receiver-HI-Z-Terminals use a 1:4 Step-Up-Transformer.

yes it is that simple - iane ~ RHF

The laptop with a program like www.davee.com 's scanner recorder is
more useful for VHF comms that are intermittent than capturing
shortwave.

A laptop powered from a portable power supply on your 12V auto is QRM
city. A laptop in it's internal battery is OK. One of my projects that
I never get around to doing is to design a filter to use between the
12V from the car and the portable notebook power supply. Unless you
have a late generation notebook, you can't get more than 3 hours of use
on the internal batteries.

The moving (ripple?) would take forever, but the inconvenience to each occupant would be rather short lived. I'm more worried about the new visitor. If there are already an infinite number of guests in the hotel, where did the guest appear from? ... and are there fire regulations being broken by overbooking the rooms?

- GIANT EXOTIC MAGNAVOX D 8803 AM/FM/SW RECEIVER rare!!!
-
- http://cgi.ebay.com/_W0QQitemZ200032268918
-
- With 22 Bids and a Current Price of $654
-
- Ten nice Photos and Yes It Is a " B I G " Shortwave BoomBox :o)
-
- You Too Can Say : Oh No - I Paid Too Much !
- - - - Tale$ from "The eBay" and Beyond . . . ~ RHF
- .
- .
- . .

Forgot to mention that this Giant Exotic Mag-Na-Box
is being offered at auction by : "Blue-Sky-Radio".

We Now Have Blue-Sky-Radio's Blue-Green Drap
that is Fading . . . Into The-Bright-White-Light !
http://search.ebay.com/_W0QQsassZblue_sky_radioQQhtZ-1

Have You Seen "The Light" ?

- - - Behold "The Light" !

Come Into "The Light" !

{ Eat Your Heart Out Radio-Mart ! }

and then there was light ~ RHF

Hilbert's Paradox of the Grand Hotel
http://en.wikipedia.org/wiki/Hilbert's_paradox_of_the_Grand_Hotel
What is a "Dox" ? -and may I ask- Why Do We Need A Par-a-Dem
{Pair-of-Them} To Confuse Ourselves ? ? ?

INFINITY - With respect to "The Universe" is a concept that has
a basis in-fact only to the extent at in the past "The Universe"
has been Expanding -and- in the future "The Universe" will be
Expanding. - - - Where "The Universe" is Expanding and forever
getting bigger, And Bigger. AND BIGGER ! - Beyond Our Ability
to Comprehend {Imagine} - THAT IS INFINITY [.]

Now with Respect to the Grand Hotel having an Infinity of Rooms
that are all appear to be occupied with new guests arriving at every
moment-in-time : The New Rooms {Ever-Expanding} are being
created in the Null-Time-between-Time when Guest's Appear.

Therefore We May Conclude that with respect to Infinity :
Time as a Concept is Static -and- Expansion as a Concept is Dynamic.

As Buzz-LightYear says : To Infinity And Beyond !
http://en.wikipedia.org/wiki/Buzz_Lightyear

theoretically speaking - this has been a waste of time ~ RHF {ibid}
[Remember - No-one has ever attempted . . .

a Double By-Pass Brain Transplant before.]
.

And real world dielectrics are less lossy at DC than real world conductors.
So, the conductor resistance would dominate the conductor resistance -
dielectric conductance ratio over a very long run.

Any ohmmeter will measure the resistance of a few thousand feet of
transmission line. But it would take a sensitive meter at much higher
voltage to read the slight leakage current in that same amount of line.

But I don't know if that would be true at all temperatures, though.

Frank Dresser

> WTF? Censorship of already public information? By whom, for what? I
> thought ILG was in Germany anyways -

Part of the reason may be explained in the last paragraph of this:

PUBLICATIONS
++++++++++++

ILGRADIO --- FREE DATABASE PROJECT --- Project temporarily stopped
because:
- copyright violence
- censorship pressure by IBB Washington
- spam-mail and form-mail (about 700 a day)

After successful solution of these problems it will be decided later
if this project will continue or not ...
(from http://www.ilgradio.com Sept 30 via DXLD)

Such a shame... Does anyone has any good alternatives to use while
waiting for its return (I hope)? (Jeroen Kloppenburg, dxldyg via DXLD)

Several online sources, each with a different approach and its
strengths and weaknesses, make up for ILG, which I have found also has
significant weaknesses:

HFCC A-06 schedule, download zip file from
http://www.hfcc.org/data/index.html
Unfortunately, HFCC is incomplete, and you may thank Mr. ILG for that!

BC A06 - The comprehensive shortwave broadcasting schedule
http://www.eibi.de.vu/ leading to:
in time order:
http://www.susi-und-strolch.de/eibi/dx/bc-a06.txt
and frequency order:
http://www.susi-und-strolch.de/eibi/dx/freq-a06.txt

Schedules sorted by language:
http://www.addx.de/Hfpdat/plaene.php

Schedules sorted by station, many from DXLD:
http://www.bclnews.it

Prime Time Shortwave,
many different sorts, English only, without all the details,
and not always up to date:
http://www.primetimeshortwave.com

WRTH A-06 supplement, by country, also language and frequency sorts:
http://www.wrth.com/files/WRTHMay06.pdf
73, (Glenn Hauser, DX LISTENING DIGEST)

I was using the ILG together with the "Tropenband Liste" from Pasmann,
another great resource which has been stopped :(

``Unfortunately, HFCC is incomplete, and you may thank Mr. ILG for
that!``

How come? [see below]. EiBi looks very handy; I had it actually in my
bookmarks but forgotten all about it... Thanks :)

I've also found a "Africa List"
http://www.muenster.org/uwz/ms-alt/africalist/ which IMO is less
useful if you, like me, just browse the bands up and down, instead of
typing in exactly what you want to hear.

If at some point in time such initiatives completely disappear I would
just need some time to develop a website that a group of people could
use to update a frequency list. It would just need to find a few days
coding it. Anyway, that's a possibility for later, if all free
services are gone, *and* if there are enough people or ways to keep
such a list updated with correct data (Jeroen Kloppenburg, ibid.)

Bernd Friedewald of ILG also has a frequency management business, with
several clients including Radio Australia, and requires that HFCC
delete all `BFM` entries from publicly-accessible data. The true
reason is best known to himself, but we can only assume it is to make
his ILG and other resources for a price more valuable (Glenn Hauser,
OK, DX LISTENING DIGEST)

No need to. It essentially receives equally well in all directions on all
bands, unlike a dipole.

> And at 70M, or about 230 feet in "diameter", it is a very different
> antenna
> then a 1M much touted miracle loop.

No, the circumference is 70 meters = full wave horiz. loop @70M
If you were to transmit into this loop you would see a flat swr from 70M-6M.
No tuner required. Just need to match the ladder line to your tranmitter.
A dipole can't do that without a tuner.

> I don't think I was attempting to

A dipole, any dipole, is cut/tuned for a single band. Any signal outside
that band and its harmonics are attenuated.
Not so with a large loop - equal gain to dipoles at any frequency.

Here is a nice horiz loop program from
http://www.smeter.net/antennas/rjeloop4.php

"This program is self-contained and ready to use. It does not require
installation."
Click this link
http://www.smeter.net/software/rjeloop4.exe
then click Open to run from the web or Save to save the program to your hard
drive.

After you have entered the initial values you can vary the frequency up or
down. Then watch how the efficiancy and loss characteristics barely vary.

Couple of ideas -- C.Crane Company sells a cassette recorder that goes
as slow as 1/4 speed, and has all the bells & whistles for recording
from a radio output. It costs $100.

Or, look at the little micro-cassette recorders that are frequently
used for business purposes; they're quite small; I have an Olympus
Pearlcorder S950; think I paid $50 or $100 or so for it. There's
usually a pretty good selection of these smaller recorders at places
like OfficeMax. The fidelity is surprisingly good, especially if
patched into a bigger audio system.

You may have a hard time getting that by the 50 Stude in my Garage.
Driven daily, and the only car I take on business trips.

Of course you were speaking of 70's, weren't you.

Come to think of it, an old high school buddy retired his Pinto wagon
in 96 because he couldn't get parts for it.

Never mind.

Ok, very good info fellas. I'll look into something a little more permanent for the future. I like 1/4 speed option and hooks for the radio.

As far as filter goes I would think an off the shelf EMI filter that you can get at digi-key might go a long way towards fixin noise from PC. There really isn't so much magic as all the filter designer guys say, but if you never designed one then you want to pay attention to the layout. I use store bought for my smps here in the shack, but design them for large motor drives at work.

What kind of rednecks are you talking about? Birds that have Red Necks? The so-called term redneck/rednecks,whatever, is something most people are not familiar with (except their own Stupid fantasy) and that makes me believe they are the real ''rednecks''.Come on over here to Jackson,Mississippi to the Old Capitol Museum (Look it up,it is right there where Capitol Street T's into State State Street in down town Jackson,you can't miss it) and You ask them about that newspaper article about the old Southern democrat party (I saw that article back in the 1950's) and you ask them why they were called rednecks.I know why,,, Do You?

There is a Red Neck Fishing Lure factory in New Hebron,Mississippi,I guess it is still there anyway.
I am not a redneck.You watch too many Stupid hollyweird movies and You believe everything that is not the Truth.

$2000 for a USED R8B is crazy...

Let's see...

My Radios:

Satellit 800 $400
Icom 718 Transmitter
(similar to R75) $575
Icom 703 Transmitter $400
G.E. super Radio $50
Ten Tec RX 320 (Used) $175
Wellbrook Antenna AL1530 $220
Radio Shack DX398 (ATS-909) $140
Various homemade longwires $30

$1990
+ Dominoes Pizza w/coupon $10

$2000

I've got six more radios not listed but heh... What do you expect for $2000?

That's an exceptional solution, of course. There are circumstances where this solution would not apply. Where antennae produce more hassles than the owner would like to deal with. (Most of which can be overcome, but require a LOT of tenacity.) Or where there simply isn't enough real estate.

Dressler actives are very low in noise, and surprisingly immune to overload, making them excellent solutions for a variety of applications. Placement is critical, though, and must be in the quietest location on the property. And installation guidelines must be followed. But if you're a serious SWL, and a wire isn't your best practical solution, a Dressler is the next best thing to being on a island in the middle of salt water.

And this IS a good price.

I don't know why you fella's are recommending old technology like a tape recorder.
It's like recommending to a fella that want's a new auto to buy a wagon like they dragged across the prairies in the old days.
All the serious DXer's I know moved on to more modern technology years ago.

I personally use a Sony MiniDisc that is quite fantastic compared with a tape recorder, but many of my U.S. DX buddies have moved further forward to using MP3 solid state recorders with great results.

True enough. How and when would the flow stabilize and at what percentage between zero amps and a full short? I get the feeling that this may be leading towards the characteristic impedance of the line, eg 50 ohms..

What it was was an old wall outlet in the Bell South woman's house next door and it was leading to a full short.It wasen't making a good connection,their tv set and stereo and window unit airconditioner and the lights were dimming low.She replaced that wall outlet and now everything is honky dory again over there.

I can't tell you the last time I used a tape deck. I don't like
recording in MP3 since ultimately I will have to edit the audio. If you
transport the final audio in MP3, it means the audio has gone through
compression twice. Generally that sounds bad. I record on a hard drive
in PCM. For mono, 16bits, and 22050Hz (plenty fast for shortwave), an
hour is around 150Mbytes. Considering the hard drive is in tens of G
bytes, recording PCM isn't a big deal.

I've also done stereo recordings, putting two different mono tracks on
the same stream. In PCM, the channels will still be discrete. The same
is true for Ogg Vorbis, if you really must compress while recording.
MP3 Pro can do "dual mono", but I believe the free MP3 recorder codec
blend the channels.

In 1989, Rep. Barney Frank of Massachusetts, admitted he'd lived with
Steve Gobie, a male prostitute who ran a gay sex-for-hire ring out of
Frank's apartment. Frank, it was later discovered, used his position to
fix 33 parking tickets for Gobie.

What happened to Frank? The House voted 408-18 to reprimand him -- a
slap on the wrist. Today he's an honored Democratic member of Congress,
much in demand as a speaker and "conscience of the party."

I have a faint signal (SIO 252) on 6000 khz starting at 1550 UTC. I heard foreign language pop music. I'm not positive, but my guess for the language is some dialect of Chinese.

According to EiBi, this could be Radio Guaiba or City Sounds. It went silent at 1600 UTC, which makes me think it's City Sounds, or something unlisted like SoH. If there was identification at the end of the broadcast, I didn't understand it.

Sony SW77 without a doubt
better sound
better reception
better controls
better looks
more functions
better selectivity
better on SSB

I have both and since I bought my SW77 I hardly ever bother at all with the
2010

I still use cassette recorders here though not as much as years ago. I have 3
Radio Shack CTR-66's here and a CTR-37.

I used to use them a lot to record broadcasts while I was sleeping.

I have a Zenith recorder hooked to my TV; it handles both dvd and vhs
recording. I use dvd for permanent stuff, movies. I use vhs to just
casually time-shift a football game or something. The old technology
is easier for us old farts :-)

A broadcast I'd not listened to in many years. Heard here at 1730 on 17810 with a good signal, also on 15495 weak, and 7130 not audible.

The broadcast is sked Mon-Fri 1730-1745 in English.

I believe they still QSL.

The technology you use, really, should be selected pursuant to your application. Basics can be covered with about anything. I still have and use a pair of Webster wire recorders when all my other recorders are tied up. So, virtually anything will capture the sound.

Cassette is probably the most economical choice. They're almost disposable in the event of a failure, and they can be picked up at garage sales, flea markets, and other grot shops for pennies. Sometimes in numbers. They offer little or no interference to your Degen. But tapes are getting harder to find, quality tape is still fragile (never use 120 min cassettes--the stock is too thin, and most cassette machines require too much tension for auto stop...stretched tapes are tougher to splice than open reels, and can be lost forever) and quality of tape to tape dubs is poor. So archiving or sharing is not a practical option.

Open reel machines are widely available, offer convenient performance, but inconvenient acquisition of media. And like cassette, interference isn't a problem in most cases.

Digital recording presents a significant number of advantages in management options. And accuracy can be exceptional, even though the project audio isn't. DAT is expensive, and even more fragile than cassette. Standalone CD recorders are not cheap. Computer based audio presents, often, noise problems.

That said, computer based audio recording offers the greatest flexibility in audio management and some surprisingly good applications are freeware. Like Audacity. Overkill, perhaps, but anything worth doing is worth overdoing.

There's also Mini Disc. Which can, depending on conditions, archive fairly well, offer decent, but not breathtaking, accuracy, and it's compact, and easily adaptable to your application. I know radio stations that use mini disc for commercials. Sharing of audio content may be less convenient, with Mini Disc, though.

If you're using a Degen, I'm not thinking PC based audio will be you best option. There will be noise issues, unless you can mount a remote antenna with a shielded transmission line. If you're willing to go that route, you can have quite the operation. With convenient and versatile management, and good audio quality.

For simple, no nonsense recording of your Degen,my recommendations would be: a reasonable quality cassette deck, preferably one with line inputs, though now that you have the pad, that's not so much of an issue, will get you where you want to go. And any reasonable quality C-90 cassette tape.

Second after that would be Mini Disc. Portable, or console--no matter as long as it has line inputs.

Followed by PC audio. Notebooks can be (though not always are) quieter than desktops. That's where your versatility will be. And most have line level inputs. The application can be anything that you're comfortable with. Start with the freeware apps.

3523. Wellbrook ALA1530+ Vs. ALA100?

Newsgroup: rec.radio.shortwave
Date: 2006-10-03 20:59:23 UTC
From: Seeing-I-dawg <woof@woof.woof>
Message-ID: <12i5jokrk67jvff@corp.supernews.com>
Source record: 93748

Do you currently use a longwire or dipole or have the real estate for one?
Have you been considering the ALA1530+ instead?

I exchanged emails with Wellbrook about using the ALA100 with my current 70M
fullwave Horizontal loop.

About Horizontal loops
http://www.cebik.com/wire/hl.html
http://www.cebik.com/fdim/atl1.html
http://www.cebik.com/wire/horloop.html

About ALA100 http://www.wellbrook.uk.com/ALA100b.html

The ALA100 will allow me to use a coax feeder instead of the noise prone
450ohm ladder-line and dispense with the
antenna tuner/matchbox.

Per Wellbrook, "You may also find that a smaller vertical loop with ALA100
will give better directivity for MW plus very high gain at HF. The ALA100
will out perform the ALA1530+ , because the loop area is much larger."

So if you are considering a ALA1530+ and are currently occupying real estate
with a long-wire or dipole, you may consider joining the ends with the
ALA100 for a loop in either the horizontal or vertical plane.

Here's to the '06/'07 DXing season!
Post your logs and good luck.

First, please understand and accept that I have nothing against the
Wellbrook company or thier products. Their web page has clearly helped
many newbie SWL learn how to errect
a "long" wire antenna. And many people swear by all of their loops.
However, my
experience suggests loops may not be the do all end all.

For a alternative perspective please read the research by Dallas
Lanford at
<http://www.kongsfjord.no/> "Measurements of Some Antennas Signal to
Man Made Noise Ratios"

Every situation is different. And the guy I traded theALA 1530 to loves
it.
Perhaps under extreme noise situations loops are better.

My recent experiments mirrored Dallas' experiences.

My "shack" is still disassembled. I hope to have it up and running by the
weekend. 2 days of rain really messed with my plans.

Terry

3530. Some VERY good active antennas.

Newsgroup: rec.radio.shortwave
Date: 2006-10-03 22:03:02 UTC
From: r2000swler@hotmail.com
Message-ID: <1159912981.745864.327190@m7g2000cwm.googlegroups.com>
Source record: 93756

Dallas has posted his designs for some very good acitve antennas.

The "Lankford Active Dipole" is simply GREAT. This is the antenna
that I compared the ALA 1530 to. And active dipole won every time in
all catagories.
I live withen a few miles of a 770KHz 1KW daylight only, withen only a
slightly
greater distance from 1240KHz. The Lankford design was the only active
antenna
that I have tested that had no mix products and not harmonic
distortion.

If you notice a similarity with the AMRAD antenna, that Dallas used a
commercial,
PITA to locate, heatsink and has better IP2 and IP3 charactoristics.
His active
dipole has very low IP2 and IP3 due to the balanced design.

A more modest active antenna like the North Country, especially with
the input
JFET changed to a J310, connected in a similar manor is much better
then
their "monopole", I know there are no monoploe radiators, but it is
still no match to
the single ended design by Dallas.

It is amazing to have an antenna that is maybe 6' across that I can
null NBDs,
MW and it does a better job then I expected on HF. I am hoping to build
his
phaser and use 2 vertical Lankford active dipoles for a steerable
array.

With 8' ground rods, the single ended units do an amazing job, but I
found that
I had to take serious steps to keep common mode noise from the coax
from
degrading the otherwise excellent low noise charactoristics.

The Crystalonics FETs are very robust. I doubt if any other device
willl work
in this circuit. The only problem is the gate is connected to the case.

Terry

I have an open mind on this issue. I use one of the Wellbrook loops and I like it, but I'm perfectly prepared to believe that a small active vertical can be just as quiet. What generates confusion about this issue are the conflicting reports one hears and even the conflicting experimental results one reads about. I visited the http://www.kongsfjord.no site and found it very interesting. However, if you look at some of the reviews available on the Wellbrook website, you'll see different tests and comparisons that yield results that are much more favorable to the Wellbrooks. There may well be something wrong with the tests and comparisons carried out in those reviews. I don't see anything obviously suspect about them, but I don't have the technical expertise that some of the folks in this group have. In any case, I think it's this kind of data that accounts for the reputation the Wellbrook loops have as being extremely quiet antennas.

3532. Good AM Medium Wave Receivers?

Newsgroup: rec.radio.shortwave

If the Superadio is an SR1 or SR2, then you most likely have one of the best
AMBCB receivers at a reasonable price point.

Brenda Ann,
I am not sure which model Superradio it is? Are the serial numbers
different on an SR1 or SR2?

SR1= Heavy construction, single speaker.
SR2= Heavy construction, two speakers.
SR3= Cheap, shoddy construction, two speakers, narrow/broad switch for AM.

Too bad for him he wasn't a democrat, he would have gotten a free pass and the liberal main stream media would have tried to keep it quiet, but there would still be Matt Drudge, Michael Savage, Fox news, Rush Limbaugh and Sean Hannity to get the truth out. It's good we have voices like theirs to get the truth out. I hope the democrats are never able to silence free speech.

It's funny, the liberal democrat candidates commit fraud busing voters
around from polling place to polling place to try and get elected. The
tell them who to vote for at each polling place. The only thing they
don't do is to tell them how to properly cast a vote so it can be counted.
LOL! It must really suck to be stupid and a liberal.

Not in the case of Mr. Studds. He was a boy-lover. A page boy, at
that. Like 17-ish. Took the kid out of the country for fun 'n frolic,
according to this afternoon's coverage.

And the reports indicated that Mr. Franks' little friend was employing
some "young men", also.

One problem of post in a public news group is that at times I feel like
I'm talking to a brick wall.

Most peoples experience in high noise areas will favor a loop antenna
over a dipole for locally picked up noise. This is an expected
theoretical result of local induction fields affecting loop and dipole
antennas.

The IP2 and IP3 differences in the active antennas are due to the
amplifier design not the antenna.

The original meaning refers to poor working class white folk. I guess we
cant have any of those.

Here is one more vote for mini-disc.
An under-rated, flexible, high quality system.
Too bad Sony didn't know how to market it.

This is what I use around here for all kinds of recording projects.

I went from cassette to mini-disc - - no looking back.

The sun burnt farmer's necks are the meaning I'd grown up with. Up until
the time of Archie Bunker, of course...

==========
A slang term, usually for a rural white southerner who is politically
conservative, racist, and a religious fundamentalist (see
fundamentalism). This term is generally considered offensive. It
originated in reference to agricultural workers, alluding to how the
back of a person's neck will be burned by the sun if he works long hours
in the fields.

How are you finding the E1? I plan on a purchase in the future. What is the BEST feature for you? The worst? Would you buy another one?

I've had a Redsun RP2100 for a couple of months now and can confirm that it
is far superior to my GE SRIII.
I regularly picks up stations 4,000 to 6,000 miles away.
It's just no contest with the SRIII, as it is digital, very quiet, lovely
sound and VERY sensitive on the MW band.
See my comment at:
http://www.eham.net/reviews/detail/6055

Buy it from tqchina on eBay, as he offers excellent service and has the
radio with the English markings (lypn has the Chinese markings)

They accomplish this task by contracting Haliburtian to pile up dead US solders to reach the light bulb made by GE. Due to this huge expense, they pass more tax cuts for rich republicans so nobody (who counts) is hurt financially. Everybody's a winner! Right?

Many notebooks have dropped line inputs. You can still get Creative
cards if you want a line input. The Creative card are certainly better
in playing back audio.

They accomplish this task by contracting Haliburtian to pile up dead US solders to reach the light bulb made by GE. Due to this huge expense, they pass more tax cuts for rich republicans so nobody (who counts) is hurt financially. Everybody's a winner! Right?
=
Heck. Maybe The Slickster and Janet could have used Halliburton to rebuild the World Trade Center the first time it was bombed. Or, and get this...how about if Halliburton would have rebuilt the USS Cole? Or the Marine barracks in Lebanon?
I bet a little bit of that Halliburton money could have easily rebuilt the Waco compound that Reno turned into a crematory...
But wait! Clinton was far too busy granting amnesty to home-grown terrorists (get that Hillary vote) while spending monies given him from Communist China.
And Clinton's gal, the Atty. General who advocated masturbation? Jocylen? Didn't she go obscure right after her son was arrested for drug sales?

Oh, and not let us forget Roger Clinton, the half-brother druggie supreme who snorted more Cocaine than a vacuum sweeper.

And last, but most importantly. 95% of the wealthiest people in this country pay 80% of the taxes gathered. The low earners, the ones you support, pay a pittance compared to the rich. Your claim is pure Democrat poppycock.

- One problem of post in a public news group is
- that at times I feel like I'm talking to a brick wall.

Telamon - You Just Keep-On Writing :
Cause This Brick Wall Is Listening ! ~ RHF

- Most peoples experience in high noise areas will favor
- a loop antenna over a dipole for locally picked up noise.

OK !

- This is an expected theoretical result of local induction
- fields affecting loop and dipole antennas.

OK !

- The IP2 and IP3 differences in the active antennas
- are due to the amplifier design not the antenna.

The ablity to 'rotate' a small Loop Antenna to Null-Out
a Local Offending Radio Station {Signal Source} does
have to be factored into the practical {use} equation.
-vice- A small Vertical Whip Antenna {Omni-Directional} :
Given that the Amplifier used with both Antennas has
the same characteristics.

However - The Practical {Use} Equation {Societal Factoring}
may make the 'near invisibility' of the Small {Short-and-Thin}
Vertical Whip Antenna the only realistic choice for an Antenna
by a Shortwave Listener (SWL) "When NO Antenna Is Allowed."

what antenna ? i don't see an antenna :
i ain't got no stinking antenna ~ RHF

I've had the RP2100 for a month now and I'm very pleased with it.
I got mine from Lypn and it came with english markings although
it was advertized as having chinese labeling.

A poor 'hack-and-attack' interpretation. Read the entire quote: "We
should relieve the burden on the rich by sending IRS agents out on the
streets to shake down the homeless and senior citizens, huh?"

>I don't "need a clue" as that overused trite phrase of yours indicates.
>That is what I like about Liberals. Catch phrases such as "get a clue" or,
>"smell the coffee" are so easy to use.

Yes, and "poppycock" is so much more chic.

>So..living in a "civilized society", according to you, requires that I
>support the non-workers? The lazy? The druggies? Since when? According to
>who? You?
>What gives YOU the authority to tell me that I should support the lazy, the

I didn't invent civilization. If you want to abandon it, that's up to
you. Just remember that benefits don't come without responsibilities.

>Maybe you should get a copy of The Dummies Guide of Mooching.
>Liberals are all too quick to "feel sorry" for the lazy, the non-earners but
>do little to help them. Oh, yeah..you want to give THEM my tax dollars...but
>to what end?

I don't want to give them my tax dollars any more than you do. I would
much rather they earn their own livings and make contributions to
society like the rest of us. But not all of them are malingerers; many
of them have legitimate reasons for not being productive members of
society. The most common reasons are psychological and emotional
dysfunction, so I am very much in favor of providing mental health
treatment for anyone. That's how to attack the cause of a problem
(mental health) instead of throwing money at its effects (poverty).
Now how does that make me a liberal?

>How about we turn that around in that, "We pay off the beggars so they don't

I just did.

"Where did I say they did?"

Well, I copied and pasted your comment that, "by sending IRS agents out on
the

streets to shake down the homeless and senior citizens"
I guess that constitutes you saying "they did".

I don't "need a clue" as that overused trite phrase of yours indicates.
That is what I like about Liberals. Catch phrases such as "get a clue" or, "smell the coffee" are so easy to use.
So..living in a "civilized society", according to you, requires that I support the non-workers? The lazy? The druggies? Since when? According to who? You?
What gives YOU the authority to tell me that I should support the lazy, the unemployed?

Maybe you should get a copy of The Dummies Guide of Mooching.
Liberals are all too quick to "feel sorry" for the lazy, the non-earners but do little to help them. Oh, yeah..you want to give THEM my tax dollars...but to what end?

How about we turn that around in that, "We pay off the beggars so they don't become theives and steal our shit", and we do it with more and more taxes and handouts. Of course the beggars remain thieves, they count on the "dole" and they will steal you and me blind, given the opportunity.

What have you solved???

3590. Need advice choosing a receiver

Newsgroup: rec.radio.shortwave
Date: 2006-10-04 12:42:39 UTC
From: Pete Boyd <peteb@soi.city.ac.uk>
Message-ID: <eg0a80bjn1@canard.ulcc.ac.uk>
Source record: 93716

I have an Icom IC-R5 scanner, mainly for listening to airband stuff, but have become increasingly interested in shortwave and wonder if I could receive more station more clearly with a specialised shortwave radio. I need something portable and have seen things like the Eton E10 for £90 and the Sony ICF-SW7600GR for £120 (I'm in the UK). What are these like? Should I be considering other models/manufacturers?

Or should I think about a better antenna for the scanner. It would have to be an indoor model - I don't have any outside space to erect anything (not that local planners would let me even if I had the space - I'm in Central London).

Thanks
Pete

> >
>
> SR1= Heavy construction, single speaker.
> SR2= Heavy construction, two speakers.
> SR3= Cheap, shoddy construction, two speakers, narrow/broad switch for AM.

SR1= Model 7-2880B (Though letter at the end might be different)
SR2= Model 7-2885D (Though letter at the end might be different)
SR3= Model 7-2887A (Though letter at the end might be different)

There was a digital version of the Superadio and that was Model 7-2882.

Quite possibly Radio Habana, Cuba. Though EiBi shows them 1100-1500, today they carried on past 1500, though the audio dropped at 1502.

They are known to stay on later from time to time for whatever reason.

No doubt you think I'm a Nazi because I support Bush. Surprise! I'm Jewish!
Ah, what little you know of us American Bush supporters. You've been fed the pabulum that we're all little goose-stepping Gestapo agents ("goose-stapos," if you wish to play with words).
If you were really, truly smart, you would form your own opinons about Bush rather than parrot the virulent anti-Bush attitude of Chuck Harder and others.
Stay in Canada, ve3. We don't want you down here.

Probably believe him [Harder]. And his comments above only scratched the surface of other things that could be said against Bush.

Please read (and comment on) ve3's thoughtful reply to your post. The only thing I would disagree with is ve3's comment that:

> As far as class structure is concerned, the middle class is
> declining, workers' wages are stagnant,

Worker's wages are NOT "stagnant", they are DECLINING. The U.S. Census Bureau published the statement a few weeks ago that stated the "Median Household Income" has -decreased- since the year 2000.

Interesting! In my opinion, "Blatant, misguided economics" seems to be
about as close as you can come to saying "The fix is in" and "Payola"
without actually saying it.

Welcome to the return of the "Whorehouse Years" at the FCC...

Terry, this post wasn't intended as an addendum to my previous post to you about horizontal loops.

I don't/can't dispute the claims about verticals Vs. loops regarding noise. Generally, a vertical antenna is ideal for DXing since its main "lobe" is towards the horizon (in all directions). But I know you knew that. Could that account for the difference in S/MMN ratio in the Kongsfjord comparison?

The two main practical advantages of loops is steerability or nulling with relatively small loops and inherently broadbanded performance with relatively large (full wave) loops. The Wellbrook ALA1530+ claims both - broadband performance using a broadband amplifier and steerability using a small "shielded" loop.

The ALA1530+ design is different from the ALA100 in that the ALA1530+ "loop" is inside an aluminum tube/shield. Alegedly this shield(?) rejects the nearby Electric-field which supposedly contains the noise component and amplifies the Magnetic-field which supposedly does not contain the noise [Electro-Magnetic wave = RF]. The ALA100 wire antenna component has no shield so how can it reject nearby Electric-fields containing noise? Additionally, in the Kongsfjord power line comparison (45Ft vertical Vs. Loop) the vertical's main lobe is at the horizon (under the powerline). The lobes of the loop are very much like that of a dipole (above the horizon) - more closely aimed at the powerline. Therefor, I think the Kongsfjord comparison is missplaced. But I am not versed with the noise argument related to loops Vs. verticals.

My point to my original post in this thread was that if you already have a dipole or longwire (which is inherently NOT broadbanded) you can use the ALA100 to convert them into a loop. The Wellbrook ALA100 product is simply a broadband amplifier (I suspect similiar to the 1530). It does not include any "antenna" or coax. You supply the antenna wire yourself - an existing dipole or longwire folded into some resemblance to a large broadbanded loop. The shape is not critical as long as the wires are not too close.

Converting a dipole or longwire into a broadbanded loop and adding a broadbanded amplifier like the ALA100 seems like a good idea. Although the ALA100 was meant to be used with a relatively medium sized rotatable vertical loop, http://www.wellbrook.uk.com/ALA100b.html
Wellbrook's email in essence said it will work with any reasonably sized loop oriented in any plane - vertically or horizontally.

My antenna goal is to have one antenna and to squeeze as much performance out of it on as many frequencies (500KHz-30MHz) as possible. That, my friend, can be most closely accomplished with a large loop. However, I am intriqed by the 15ft vertical that is diagramed at the Kongsfjord noise measurments link.

There are no ideal antennas. Just antennas with ideal applications.

You are right Ace, I have been asked by DXer's in Europe to investigate this
frequency, but all I pick up is "Radio Habana Cuba"

BTW, re Diego Garcia AFN - I get 4319 regularly in the evenings, but daytime
reception of 12579 seems to have disappeared.
Have you any info on that?

That reminds me of the old slogan of the 30's "Come visit us before we come visit you." My greatest concern is that plans for a North American Alliance being developed in secret by the elite will get to the point where Canada, the US, and Mexico will be combined a la European Union. I think that a foreigner would be nuts to visit the US with these new laws in place. One mistake and he could find himself on a rack in Moldavia. So don't alarm yourseld: I ain't coming, although I wonder at your Royal "we" ...does the State Department know about this? Or does "we" mean that you have a tapeworm? Which outfit are you speaking for? My opinion about George Bush is based on the economic performance of the last six years, the invasion of Iraq, and the mass invasion of Mexicans across the southern border. It has nothing to do with Harder. I understand that millions of patriotic Americans support the Democrats and have a similar opinion to mine.

This is beside the point. It is ridiculous to paint an entire group of people based on the actions of one, and it is absurd to cause turmoil over personal actions for political reasons. The specific issue should be managed as a matter of personal legal responsibility in the appropriate venue, and excluded from the issues of politics and the good of the nation - which should remain everyone else's primary concern.

There are far bigger issues to address. Let's get on with it, people, and ignore this lurid garbage.

Addition part II:
The powerline noise is horizontally polarized while a vertical antenna is
vertically polarized. The noise was 90 degrees out of phase [typically a
difference of what? 6db?]. Thus the vertical antenna in this situation was
at a distinct advantage.
Out of phase and major lobe pointed away from the powerline.

A square loop, as is the ALA100 loop, is both horizontally and vertically
polarized. Thus more sensitive to receiving the horizontally polarized
powerline noise compared to a vertical antenna.

First, -his- example was *SEVENTEEN* years ago (1989), my example was from a few months ago. Let's try and stay a little bit current...

But to answer the question (which he already answered himself), the House *did* reprimand him and did give him a slap on the wrist--which is exactly one more slap on the wrist than Guckert(?) the male prostitute got and one more slap on the wrist than the administration got for *never* explaining why a male prostitute had the run of the Bush White House.

Finally...moonbat? I guess the poster "ve3..." was right: it's too bad we can't have a debate without name calling. Please continue to take the low road. :-(

Sigh ... there you go again, spouting conspiracy theories.
This whole SPP brohaha is just so much "michigoss" (Yiddish for
"crap"), so much so that the Anti-Defamation League (ADL) has condemned
folks like Chuck Harder for spreading lies about SPP.
There is NO plan to create a "North American Union"; there is NO plan
to eliminate the U.S. dollar and replace it with the "Amero."
Just like those REAL knuckledraggers - the so-called "citizen militias"
of the mid-1990's - the adherents to the SPP conspiracy theory are
engaging in abject stupidity. Like the REAL Nazis, they will believe
everything that they hear.
I do not. I did not believe the Right when it severely criticized Bill
Clinton; I thought Clinton did a good job on things like crime, taxes,
the budget deficit, and yes, trade.
On foreign policy and terrorism, well ...
I'll say it right here, ve3: You are very, very stupid and ignorant.
So are you, cuhulin.
The mark of a Chuck Harder supporter!

Well, he said "blatant, misguided partisan economics". Money need not be the only consideration. Votes are the ulitmate currency in the partisan economy.

And, if BPL works, it will be a hell of alot more popular than Ham Radio with the general public.

Interesting! In my opinion, "Blatant, misguided economics" seems to be
about as close as you can come to saying "The fix is in" and "Payola"
without actually saying it.

Welcome to the return of the "Whorehouse Years" at the FCC...

Brian Hill wrote:
> you liberals shut up! You sound like a bunch of miserable whining old

>
> BH

Brian...are you on the sauce again???? You've TOTALLY missed the point!

What ever does the ARRL accusing (in my opinion) a Federal agency of
being on the take have to do with "liberal" or "crybaby"? Are you
implying "conservatives" -do- think it's OK for a Federal agency to be
on the take?

P.S.

Do you have a reading comprehension problem? If you read the original
post, you would have seen where the author, Jim Weaver, said:

> (I don't mean political party partisanship)

Liberal, conservative, Democrat, Republican, "crybaby" is NOT the issue.

The issue -IS- about the possibility of a Federal Agency being on the
take. If true, this is a bad thing for *all* American citizens in

general, no matter what their politics, and bad for short wave listeners in particular.

Please try and pay attention.

Uh, Mr. Jensen... This is about BPL and how it came to be. I think you will find that BPL *does* affect all short wave listening.

Please 'splain why you think a discussion of BPL and its (possibly crooked) origin is off topic.

Yes, they've switched to 12759. At first it was thought to be merely a transmitter *punch up error* but lo and behold, it was a real frequency change.

See:

http://myafn.dodmedia.osd.mil/radio/shortwave/

Note that there continues to be a mistake on that page in that 7812.5 from Key West, FL is actually 7811.

If you should note any changes, please let us know.

Dick - the sum total of the entire post series I have seen related to the topic header (which showed up as "Re: Why Don't?") is shown above. Before your mention of it, "BPL" wasn't there, and it appeared to be an out-of-the-blue offtopic post. If this is a topic that somehow stems from another set of topic postings on BPL that somehow went astray, I beg your pardon.

Although I still have to admit, I don't see how BPL is a 'liberal vs. conservative' fight, or why BH decided to make a point of chiding liberals wrt BPL. By the way, I think BPL sucks too, and if it came about as a result of 'crooked' dealings, then I say nail the bastards whodunnit.

Like the Bell South divorced woman told me a couple of days ago when I stepped over there to hand her their snail mail,,, Opinions are like as.holes and everybody has one.

Before you ask,Why do I step over and get their snail mail after I get my snail mail from our snail mail boxes by the side of the road? Because I once saw a democrat (if y'all know what I mean) kid walking up the street and he put his hand on her snail mail box.I jumped on my phone and I called her in Natchez,Mississippi and I told her all about it.I asked her if she wanted me to pick up their snail mail and hold it untill they get back.She said,I would appreciate it if you would.

Now,You start squaking and you go hollering to barney frank.By the way,there is a guy who had to retire out of the U.S.Army because of diabetes.He used to live in the same house house next door to me.I used to pick up his snail mail too because he had to get a major heart operation a few years ago and he wound up living in the Veterans Home a mile and a half North of me.I used to take his snail mail to his brother in laws home six miles South of me because his brother in law and his sister handle his snail mail thingys for him.

Money or votes-NOT the point. Possibly being on the take (for whatever
type of compensation)and thus wrecking the SWL bands IS the point.

> And, if BPL works, it will be a hell of alot more popular than Ham Radio
> with the general public.

...and it will wipe out a hell of a lot of the short wave listening bands.

P.S.

The "newer" BPL systems notch out the ham bands and may not even be an
issue at all for the hams; however, the SWL bands -won't- be notched
out. Ultimately, it will hurt the SWLs way more than the hams.

Sorry about the header issue. I was the originator of this thread and my
original header was "Interesting BPL Comment...". Obviously, others
changed it along the way.

I wanted to hear it in the worst way...but the only receiver available to me then was a BC-348 and that only went to 18 Mc/s. I started to build a 15 meter converter, but Sputnik stopped transmitting before I could gather all the parts and finish the converter... :-(

I remember watching Sputnik,it looked like a little silvery shiny ball up there,you could see it with the naked eye.My dad owned some fairly powerfull binoculars and I used to get a better view of Sputnik.Sputnik caused America to get in a bigger hurry about the race to Space.

y'all are working me to death,digging my G.E.''Super Radio'' out.I just now dug it out again from behind my old antique pump organ (no puns,Please) which serves as my tv stand for two of my tv sets,I had to move some junk out of the way and tilt my four foot aluminum ladder back out of the way.(That's my exercise for the day)

My radio is a G.E.model no.7-2880B But it does not say Super Radio and it does not have plastic on the external whip antenna.I used to take that radio with me when I worked at the auto/truck battery factory and the battery fumes in the factory ate all of the chrome looking ''paint'' off of the radio and I replaced the push button on/off switch on top of the radio with a cheap toggle switch because the cheap on/off push button gave up the ghost long ago.

The radio still works as good as new.I bought it new at a Service Merchandise store that used to be in Jackson.Considering the value of the radio and the condition it is in now,I suppose it isn't worth much money.That doesn't bother me anyway because it isn't for sale.It's a Keeper.

>
Yep, the directivity of a loop is what the "magic" is all about.

Dallas' active dipole exhibited better, as in a better null,
directivity from 100KHz (loran)
to CB. A good buddy ratchet mouth about 3 miles from me makes a great
far field test
signal.

The Feb 1955 "Wireless Engineer" paper by J.S.Belrose gives some very
usefull
info on loop. I am not saying loops have no place. Jeff, the guy I
traded the wellbrook
to, loves it. In his RF hell it works better then anyother antenna he
has tried. Once I
get the shack rebuilt I intend to take my latest version of Dallas'
active dipole there to
see if the tighter null will help. I plan on building the WL1030 that
RHF mentioned.
Martinn Hagg's design look workable. I have major doubts about wide
band OpAmps
in a harsh RF task, but I am willing to give it a try.

I suspect that Dallas' Ultra Linear Amplifier will work as well as the
Wellbrook loop maker.
And it would be a lot less expensive. The Kiwa amp version 2, should
also work. It will
need a ?1:! broadband transformer but it is a pretty good amp.

The Belrose paper explained why the 2 different heads I have for my
McKay-Dymek DA5
behave so differently under temperature extremes. The unit that
performs the best under
wide, 100F to -20F temperature swings has a slot lengthwise to the
hollow center.

I have been in a heated conversation with some SWL aquantances here in
the central
KY area about how long a "long wire" should be. And at what length does
it start degrading
radio performance. Most SWL or hams, or even professional RF engineers,
either don' know,

or refuse to think about, the effects too much signal can cause. Front ends and first mixers
behave very badly with 1dB to many. I envy DXace becuase he clearly has a superior RF
location with a low enough background RF to degrade his R8B. Sadly around here, anything
over 100' is more likely to cause problems then help you dig out the really weak DX.

Jeff, he lives in a downtown Lexington condo, has had nasty experiences with out of band
overload causing all sorts of receiver misbehavoir. And he has an AOR7030, not the plus
version.

John,
It sounds like you are ecstatic over the radio! How do you think that
it shapes up compared to the RF-2200? I have one of those with the
rotating rod antenna and it still is very sensitive and gets good BCB.
I asked you a while back about getting good BCB DX, I live on the
coast here in Hobe Sound, FL, one mile from the beach. What kind of
loop antenna would be good that you could recommend. I read that you
have a Datong, but what about the other loops?

Huh?

Actual -proven- FACT #1 as recently published in the WSJ by the U. S.
Census Bureau:

"The 'Median Family Income' has *decreased* every year since 2000".

Fact #2: Coincidentally enough, the Republicans have been in power since
2000.

Those are the proven, *verifiable* FACTS, Jack. What are you basing
-your- statement on?

You're still a little "slow", I see.

Thanks for the response. I guess the fact you would replace it if lost
answers my questions completely. Being happy with a radio some time
after purchase is a good indication.

Ecstatic is the right word - the Redsun RP2100 is the best 100 bucks I have ever spent on a portable.
Unfortunately I have never seen a RF-2200 in South Africa so can't comment on that.

I did send you a detailed reply on this group to you regarding your original query - if you missed it you will have to look it up in the archives.

At my home QTH my main antenna is the RF Systems DX1 Pro that gives outstanding results on LW and MW. I did recommend to you if you want a loop to look at the Wellbrook's - the ALA1530 or ALA100.

When I go on DXpeditions I take along my Kiwa MW Loop that performs equally well with a well laid out 1,000 foot beverage antenna

A private auction doesn't limit who can bid on the item, it just hides the user ids of the people who are bidding on it. I bought an Icom PCR-100 from him a while ago, and while I am quite happy with it I noticed he had a few more for sale that where owned by the same guy with a 486 who was selling it because he didn't know how to use it. However, there was an issue that came up in the sale and he handled it very well.

Once you have about 50ft on the ALA100, it really cranks. I have mine in a multi-turn loop as well. With 50ft, myAR7030+ needs to switch in the attenuator on local BCB.

There are some smart ones out there. After all, why is it that the wages have decreased while the cost of living has skyrocketed over the past 5 years. Housing skyrocketed while family incomes decreased. That is not a healthy economic picture at all.

With the looming possibility of nighttime AM IBOC being approved, I wouldn't spend too much on an AM DX "machine". I had a piece of junk Grundig S350, but returned it for a cheapie $25 Radio Shack model 12-898 AM/FM PLL, that works just as well as the over-hyped S350. I think all this talk about "DX machines" is just hype.

I think that was smart buying just a cheapie radio - with SWL dying and with DRM looming on the horizon for SW and IBOC looming on the horizon for nighttime AM, I wouldn't spend much either. A lot of claims for SW and AM/FM "DX machines" is just hype - my $25 RS PLL AM/FM receiver works just as well as the Grundig S350, that I returned to RS.

And you don't find the real life example it's based on offensive?

If you had more than two functioning brain cells, you would realize that
his post was an *allegory* for the bogus Iraq "war" and that the
Halliburton scandals and the piling up of dead bodies, theirs and ours,
is indeed offensive.

To quote Homer Simpson....."Facts are useless, they can be used to prove anything."

Slant economic numbers to your party line, it's easy as pie. If you are right wing, just quote productivity numbers. If you are on the left, use the middle class figures and remind people of how war economies are usually bolstered.

Reality is that we have had good economic Presidents from both sides of this eternal conflict, and heinous ones from both sides as well. Our current Dictator (you actually have to win an election to be President, Bush didn't win without cheating, hence his Dictator status via Coup d'Etat) wouldn't fall in either catagory. His economic policies are bad, but not heinous.

Who cares anyway, when the Comet hits later this month (as posted in another thread) national economic policy will be fucked anyway.

You pretty much nailed it. No antenna is ideal. The fun is finding one, two, three... that work respectably with your gear, your particular RF environment, and your listening goals. That could be anything from a beverage to a rubber duck :-)

IM - yech! Outboard filter(s) to knock down the offending station(s) perhaps?

Regarding longwires; Why? It will have peaks and valleys in reception across the RF spectrum. Join the ends to make a horizontal loop and that will disappear - linear response.

I respect Guy Atkins remarks regarding his dissappointment with the Wellbrook 1530. I have never owned a loop of that size and type and have always been apprehensive about trying it. Noise isn't a huge problem here. If I can replace my 450 ohm ladder-line feed to my horizontal loop with coax (using the ALA100 amp) I may be able to eliminate most of the remaining noise and pick up a db or two (except I can no longer transmit into it).

I no longer am a DYI with electronics. I just don't have the time or patience to gather the parts, solder the board and cross my fingers. If someone sells an assembled Dallas amplifier I may bite.

I am really getting excited about the software defined radio Guy Atkins uses. After listening to his sound bites on his SDR-1000 blog I have to lock up the credit cards. I would really enjoy attending one of his DXpeditions.

My 6 DA100E whips and 2 ALA1530s are disguised as bird feeders
and bird houses, not because of any restriction but because it
makes it neighbor-friendly.

loop in foreground and whip in background
http://home.att.net/~rhhardin/antenna.jpg

Both are supported by 8' ground rods tapped in a few feet; the
ALA1530 is on a galvinized pipe slipped over the ground rod,
with a floor flange screwed on the bottom so it doesn't sink
into the ground, making it rotatable by hand. The coax comes off
the outside of the pipe and makes a few turns looped around the pipe
for slack, this loop being covered by a stove burner reflector
against lawnmower attacks.

The bird feeder is supported by the antenna rather than vice
versa, incidentally.

OK, why would anybody have to be on the take? Is there any evidence of FCC corruption, or is this all speculation? After all, they can justify all thier actions with the "Greatest good for the greatest number" arguement, that is -- BPL brings broadband access to otherwise inaccessable areas, BPL brings increased competition with the existing broadband providers, etc.

All the FCCs recent actions prove is that they no longer care much about long distance radio reception.

>
> > And, if BPL works, it will be a hell of alot more popular than Ham Radio

Why should the FCC care? You care and I care but I think we'd have a hard time finding enough other people who'd get a congressman's attention.

Don't kid yourself. In the unlikely event that BPL somehow becomes workable, the FCC will happily give the spectrum to the BPL providers,

either by cowardly non-enforcement or by rewriting their interference regulations.

Remember, the FCC DOES NOT CARE MUCH ABOUT LONG DISTANCE RADIO RECEPTION.

And there might not be enough of us to make them care.

inferior! That is of course a vicious lie, but a lie that led to much misery, violence and death in the U.S. in the last 200 years or so.
But look at anti-Semitism. That has led to even more violence, misery and death -- culminating in the Holocaust.
Oh ... you probably believe the Holocaust didn't happen. Those crafty devil Jews ... how clever ... they faked the whole thing! Amazing!!
As much as I know about anti-Semitism, I still do not -- after about 40 years of studying it -- do not know why it even exists. It should not exist. By every logical, physical, and metaphysical argument, it should have died out about 2,000 years ago. Yet it goes on and on and on.
Oh, and finally, I am NOT a "paid agent" of the ADL, the SPLC, of anybody. That is a totally asinine assertion.
One more thing: The ADL and the SPLC are not "against free speech." They have never, never, never tried to muzzle freedom of expression. They are center-left organizations, to be sure, and have even teamed with the "dreaded" ACLU in free-speech cases.
I think I have "vented my spleen" enough here ...

If iboc winds up being on full time,day and night,,,, what is the use in buying a good DX Radio anyway? About four or five years ago,I bought a radio at Sears.The radio is Stereo (but not real quality stereo,if you know what I mean?) AM FM with a CD Player on top of the radio and two seperate speakers.I have the radio put up somewhere now and as usual,I would have to move a lot of my junk out of the way to even get at the radio.It is a grey color radio and I think the brand name is something like Sound (whatever it is,similar to those GPX radios.Some of those off the wall brand name radios are really good at DXing AM stations) I paid about $30.00 for the radio.I am pretty amazed at how well it picks up long distance AM stations.

ONe of the really nice things about a digitally tuned radio is of
course it's easy to get exactly on frequency.

There are a couple of FM stations just beyond regular reception
(well one got bumped this week when a local station came on the frequency).
Having them programmed into my bedside radio (a Delco digitally tuned
car radio running off a 12v supply) means it's really easy to check
them, and hopefully receive them when they are receivable. An analog
receiver requires a lot of constant tuning to get the same thing.

Likewise, when the band is open, it's easy to put some frequencies
into the memory rather than the local stations, again to allow for
easy frequency jumping. This also applies to AM.

And of course, it's far easier to identify a station if you can
start with a known frequency, something not always the case with
a lot of analog receivers if they aren't good shortwave receivers.

"Good AM receiver" is actually a spread. Just about anything will
get some results, all one has to do is start tuning. I think
sometimes people think they need to start with something better
before they can hear any DX.

THe SUper Radio gets touted in these threads, but not only is
it analog, but it's not that much better than the average AM
radio. Car radios often are better performers.

But yes, for this level of receptiion, a digitally tuned receiver
likely is a good choice, because of that ease of tuning. If someone
doesn't actually tune up and down the band because it's too much
trouble, they'll never hear any DX.

Of course, a third level requires much better equipment, because at that point one is struggling at a far weaker signal level, likely with a lot of interference. That's when the bells and whistles come in, and those sure aren't there on the Super Radio or the low end receivers.

Michael

Guy Atkins is very lucky to live in what must be one of the quitest RF
environments
around. My home RF level isn't as bad as I had thought, I know see what
real
bad RFI is, but at that there is very little I can hear on a AOR7030+,
R8B, or a R2000.
The first 2 recivers do a much beter job in very crowded band
conditions with very strong
signlas next to weak ones that I am intereted in.

On a "remote" mountain top in eastern KY I enjoyed pushing the AOR to
the limits.
That quite location showed the difference between a great receiver and
a much more

modest (R2000) receiver.

Perversly better locations deserve better recveivers. Since the local noise floor sets
the limit to our reception it makes sense but it does feel odd. I have been busy trying
to eliminate, or at least reduce, any unwanted RF noise. Sadly while I have had great
success at eliminating the RF noise emitted by/within our home. We got rid of our
desk top PCs, tossed the TV and similar steps have reduced my noise floor as much
as I can. Too bad I can;t convine my nieghbors to limit thier RFI. I had hoped the
Wellbrook ALA 1530 would reduce noise from nearby homes, but either the whole
lopp concept is flawed, which I believe, or my in location all the noise is "far field" and
a loop won't help.

Terry

Curious that Wellbrook states that the 1530 will operate best when it is about 30ft away from your home and for best MW reception mounted near the ground. It alegedly performs better on SW when mounted up high at the cost of MW reception.

Where's that credit card!? LOL

Last Sunday night was Yom Kippur and all of the Israeli stations went
off the air. On the sabbath they usually transmit a carrier.

There was a short period if the band had been open for me to listen
to DX stations before the fast started, but unfortunately the bands
were not "open". :-(

Geoff.

Those older model AM car radios from back in the 1950's and 1960's,I
remember they were good for AM Dxing.I once read an article about using
AM radios in homes.Something about finding or making a metal box for the
radio's cabinet.
I have an old 1950 or 1951 Ford car tube type radio sitting on a shelf
in my shed in my back yard and I own some more older car radios
too,mostly transistor car radios.
Some of those older foreign car radios are pretty good too.

Somebody was ragging on the Sat 800 in another thread so I thought I would start this thread in order to avoid hijacking thier thread.

Yes I was telling myself last night how glad I was to get one of the last Sat 800's. For program listening it is the best radio I have ever used. The AM sync also works better than any I have ever have heard. Sound quality? Yes also the best of any SW radio I have ever listened too. Maybe there is a reason that it was rated only half a star lower than a Drake R8B in Passport to World Band Radio. How about the Sony 2010 everyone is so crazy about? Yep the Sat 800 was rated much higher than that but still I think the 2010 is a good radio. The large size of the Sat 800 lends itself to great sound, great ergonomics, and a display that I can read across the room. I even use it to listen to a local FM music station sometimes. A radio with a dozen submenus, buttons that each have nine different functions and will fit in a shirt pocket? Yeah I have some like that... Which radio do I use the most? Yep... The Sat 800.

Well, they don't -have- to be on the take; it is just speculation.

However, what was remarkable (to me) was that an ARRL official (who, presumably, is much more in touch with the issue than you or I) came out and seemed to stop just short of accusing them of being on the take. And please keep this in the context of an FCC Commissioner from the 1950s outright admitting that the FCC -was- on the take during the color standards war and the VHF/UHF war. (HIS quote: "We called them the 'whorehouse years'").

Furthermore, the FCC is -refusing- to enforce their own Part 15 interference rules.

So, will an FCC spokesman appear on the 6 o'clock news tonight and say "We are on the take"? Unlikely, but between the ARRL official's comment and the 50's Commissioner's admission and the FCC's refusal to enforce their own rules, well, ya gotta wonder.

> Remember, the FCC DOES NOT CARE MUCH ABOUT LONG DISTANCE RADIO RECEPTION.

Well, maybe they should. There *ARE* other users of the HF spectrum, you know--not just hams and SWLs.

> And there might not be enough of us to make them care.

Probably true. :-(

For some easy practice with fine tuning, he may wish to tune in strong
mediumwave broadcast stations in SSB. It's much easier to "catch"
WABC's 50kw on 770 than some hams on 3941.

(I also do that to "center" the fine tuning knob on my portables,
before exploring for SSB transmissions. It makes it easier to figure
out exactly which frequency is closest to the signal before adjusting
the fine tuning.)

As one of those insensitives who ocasionally makes jokes about the 800, I understand your point--it is indeed a very useful radio and in fact saved my life once during a tornado. I was able to tether myself to it during a tornado and never budged an inch.

I've found my 'Eton FR-200' (AM/FM/SW wind-up radio) to be very good at night-time MW DXing, the band is full of stations from at least as far away as Germany (my QTH is in the centre of England).

It may be sold as the 'Grundig FR-200' in the USA, and the original manufacturer seems to be Tecsun, model 'Green-88'.

An inverted L, 15 feet vertical and 30 feet horizontal, works fine too.
You can make it longer and higher, or amplify it if you want more
signal. Though more sensitive to horizontal polarization then the
vertical, the L still beats the ALA 100 by about 10 dB S/MMN in the
near field of power lines, just like the vertical. I used verticals
for the previous comparisons because those were what I am using
currently (verticals give me better phaser performance in the MW band
than L's).

3727. More loop comments

Newsgroup: rec.radio.shortwave
Date: 2006-10-05 22:32:48 UTC
From: r2000swler@hotmail.com
Message-ID: <1160087568.573550.202240@i3g2000cwc.googlegroups.com>
Source record: 93903

I may have given the impression that I think that loops have no place in a radio system.

I am also a ham, extra class, and for the last 18 months I have been somewhat active using NVIS in a mobile setup. When you are using a 1991 Honda roof as your ground plane, a loop is the only thing that works.

My negative comments about loops should be for broad band, untuned loops.

My SWL mainly is utility and I often have 2 receivers tuned to very different frequencies.
For my SWL activities an antenna that must be tuned is not very useful.

A friend pointed out that I had tared all loops with the same brush.

I will stand by the observation that in all of my tests, small, fractional wavelength loops have no advantage over, and have proven very inferrior to the Lankford active dipole. Even a north country configured in a dipole array worked better then the Wellbrook.

I will be the first to admit that I have not experimented with larger loops for broad band SWL reception. If I every get the time it would be interesting to use a Dallas "ultra linear" amplifer with a 50' square horizontal loop. For the time being I will concentrate my energy on standard "long" wire antennas with a set of 2 vertical Lankford active dipoles couple to a phaser with an additional and rotatable horizontal active dipole. That should cover my foreseeable needs.

A Langford "ultra linear amp" makes a very good buffer for ampifing a signal prior to power division. In fact it works better, as in much higher IP2, IP3 and simple harmonic distortion then the 40 year old Nuvistor based unit I had been using for the last year or so.

FWIW we got the desk in place, stained and sealed between showers today. And I

was able to burry the copper tubing that will cary the coax away from
our home. You
can't have too good a ground. The entry bulkhead is ready to mount, and
I am only a
week behind on my planed timeline.

Terry

Ah, but it DOESN'T... BPL is a 'last mile' technology that requires
something like fiber optics or other broadband technology to get it past the
local substation. It would be able to serve(?) neighborhoods by feeding the
signal on the local branch lines and bypassing the pole pigs into homes.
They're still not going to spend the money on the fiber optic lines to get
it out to sparsely populated rural areas (or they would have already done
so). In addition, the bandwidth on BPL, from what I have read, is quite
limited, not quite half of a basic ADSL service which would most likely be
available most anywhere they would bother to put in BPL.

3734. Vertical Antenna And ALA 100 Comparisons

Newsgroup: rec.radio.shortwave
Date: 2006-10-06 01:24:47 UTC
From: R390A <r390a@yahoo.com>
Message-ID: <1160097887.680226.172310@h48g2000cwc.googlegroups.com>
Source record: 93910

To Whom It May Concern: Additions and revisions have been made to two of my articles about vertical antennas and the ALA 100 on the www.kongsfjord.com web site. The articles are (1) "Measurements Of Some Antennas Signal To Man Made Noise Ratios In The Daytime MW And LW Bands," and (2) "Some Of My Favorite Small Antennas For MW And LW." In the first article an additional comparison of the ALA 100 was made with an active whip antenna. The ALA 100 and active whip had about the same signal to man made noise ratio. In the second article some information was added about reducing noise in active whip antennas due to what are believed to be ground loops in the DC feed.
